CREATION SCIENCE EVANGELISM

Seminar Part 1a: Big Bang-Big Dud!

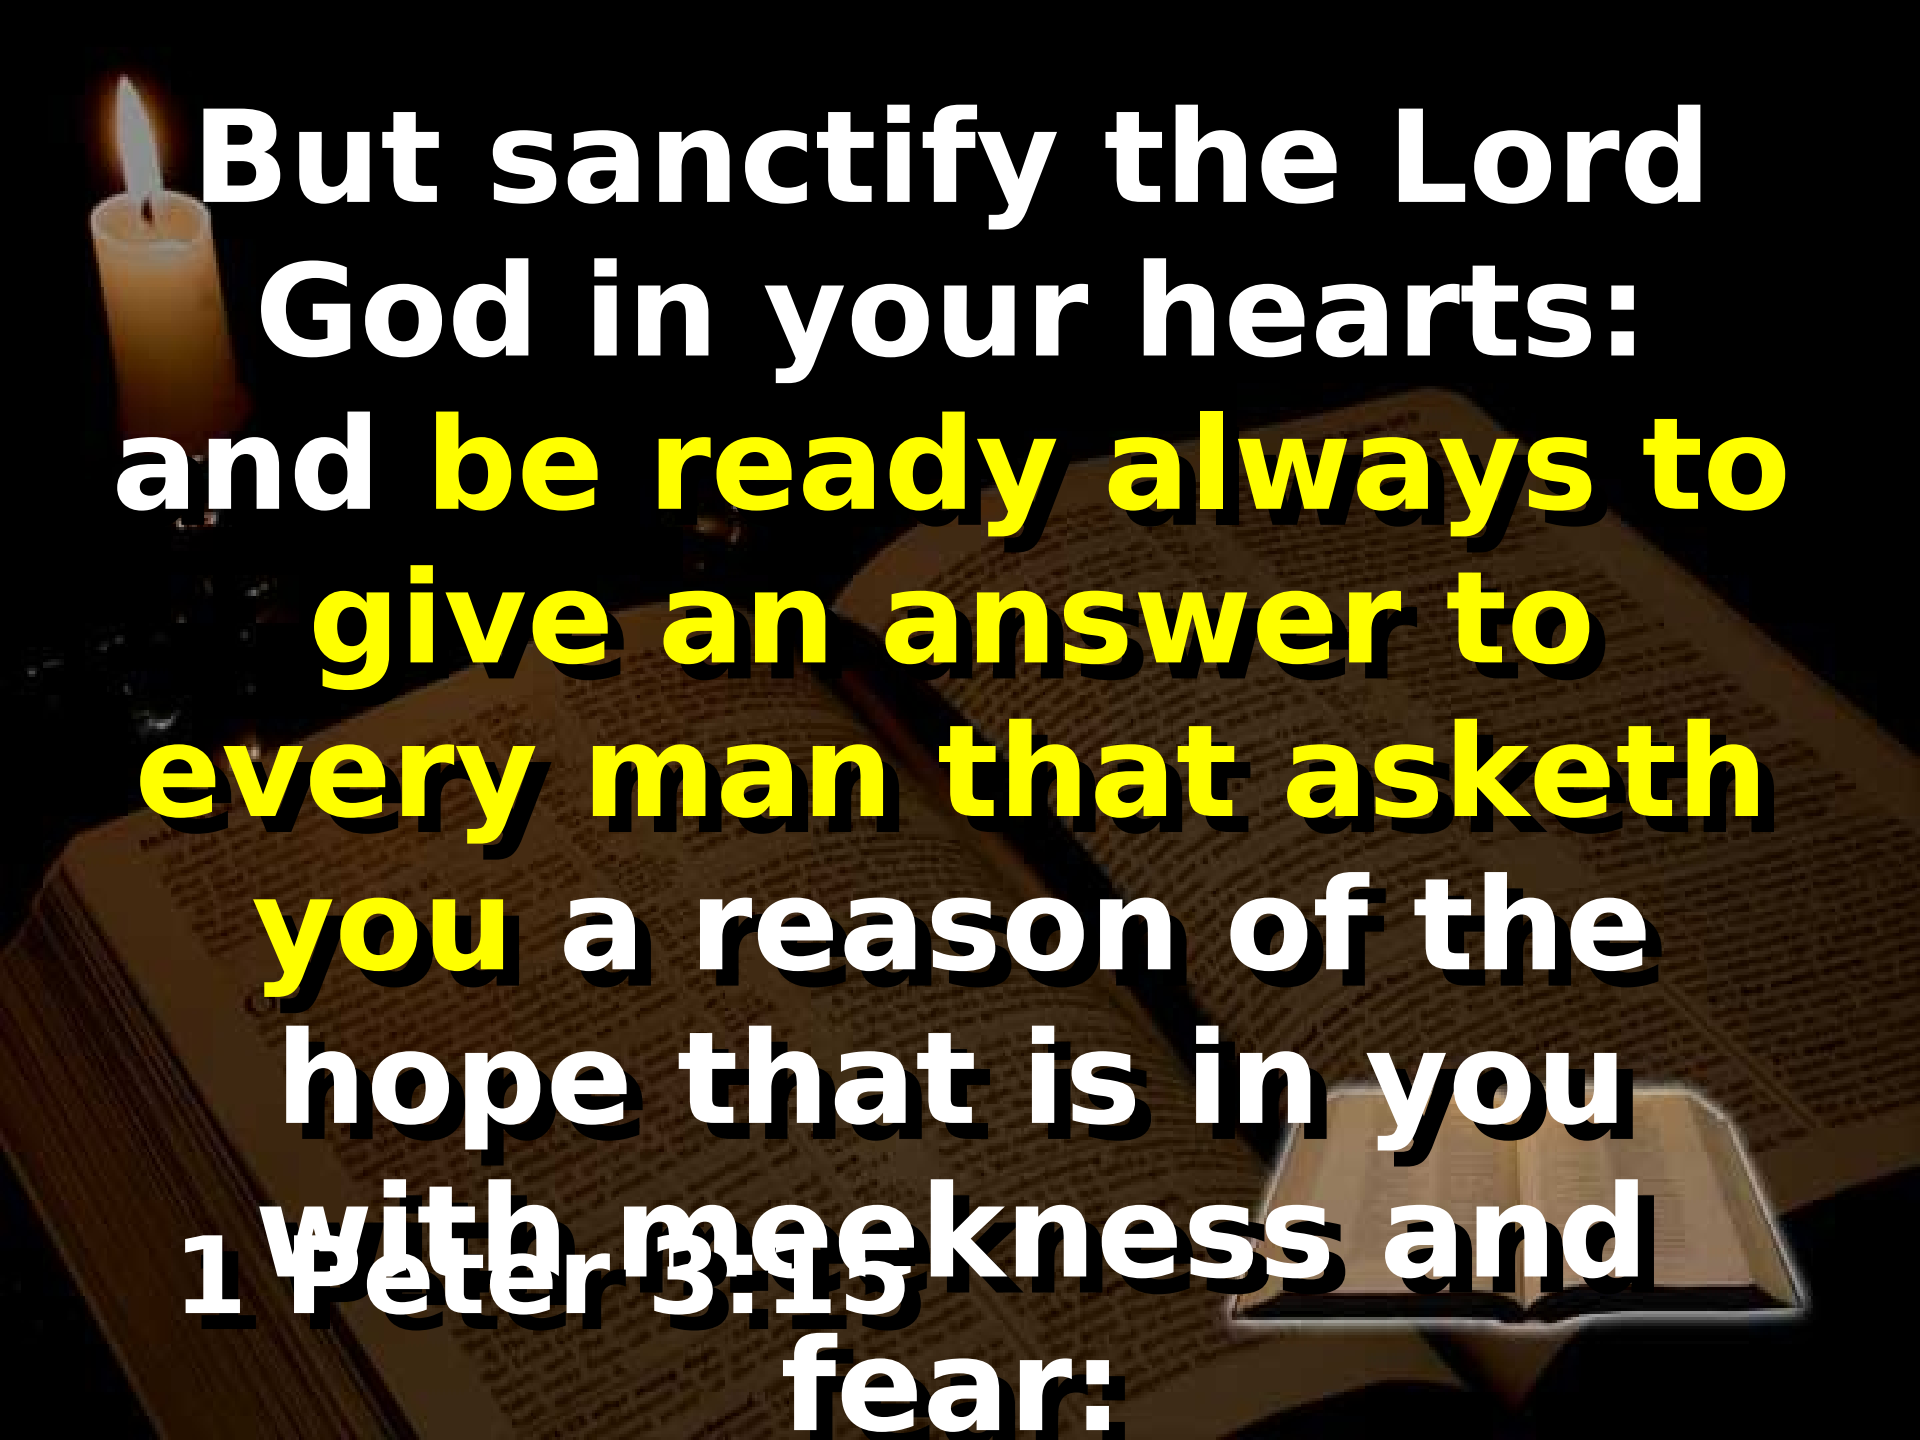

Session 1 of 14.
A Creation Seminar
by
Dr. Kent Hovind

c/o 29 Cummings Road
Pensacola, FL [32503]
850-479-3466

All scripture is given by inspiration of God, and *is* profitable for doctrine, for reproof, for correction, for instruction in righteousness:
2 Timothy 3:16

But sanctify the Lord God in your hearts: and be ready always to give an answer to every man that asketh you a reason of the hope that is in you with meekness and fear:
1 Peter 3:15

I have 3 things I wish to accomplish in this seminar:

1) I want to strengthen your faith in God's Word.
2) If you are not saved I want to try to convert you, or at least make you rethink your faith in evolution.
3) If you are saved and are not doing much for the Lord I am going to try to make you uncomfortable.

God Has given us over 40 talented and dedicated people to help in our unusual ministry.

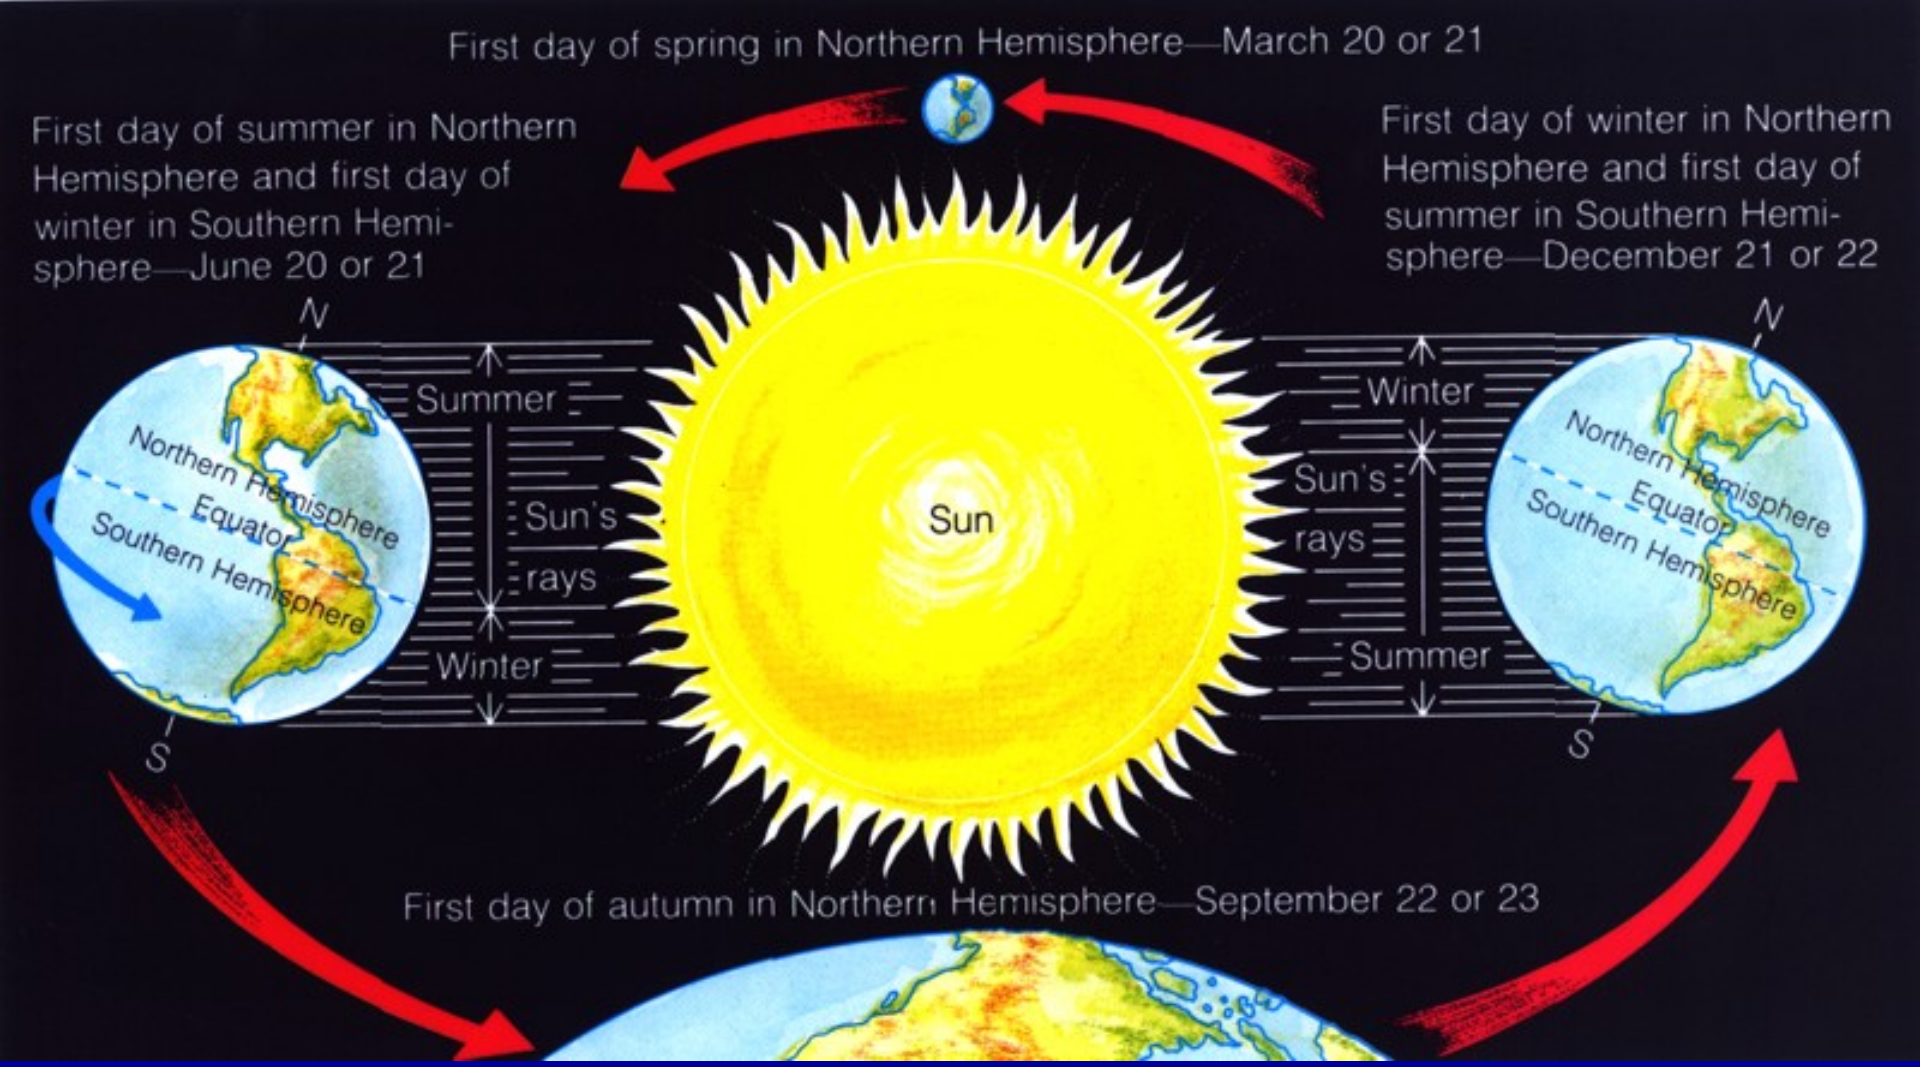

Why do we do this?

To change people's worldview and bring them to Christ!

The Russian atheist astronaut said:

Either there is a god or there isn't.

Both possibilities are frightening!

Earth is traveling at 66,000 mph around the sun.

Four Great Questions

1. **Who** am I (and what am I worth?)
2. **Where** did I come from?
3. **Why** am I here?
4. **Where** am I going when I die?

“Amazing! A ‘Big Bang’ made this world from nothing!”

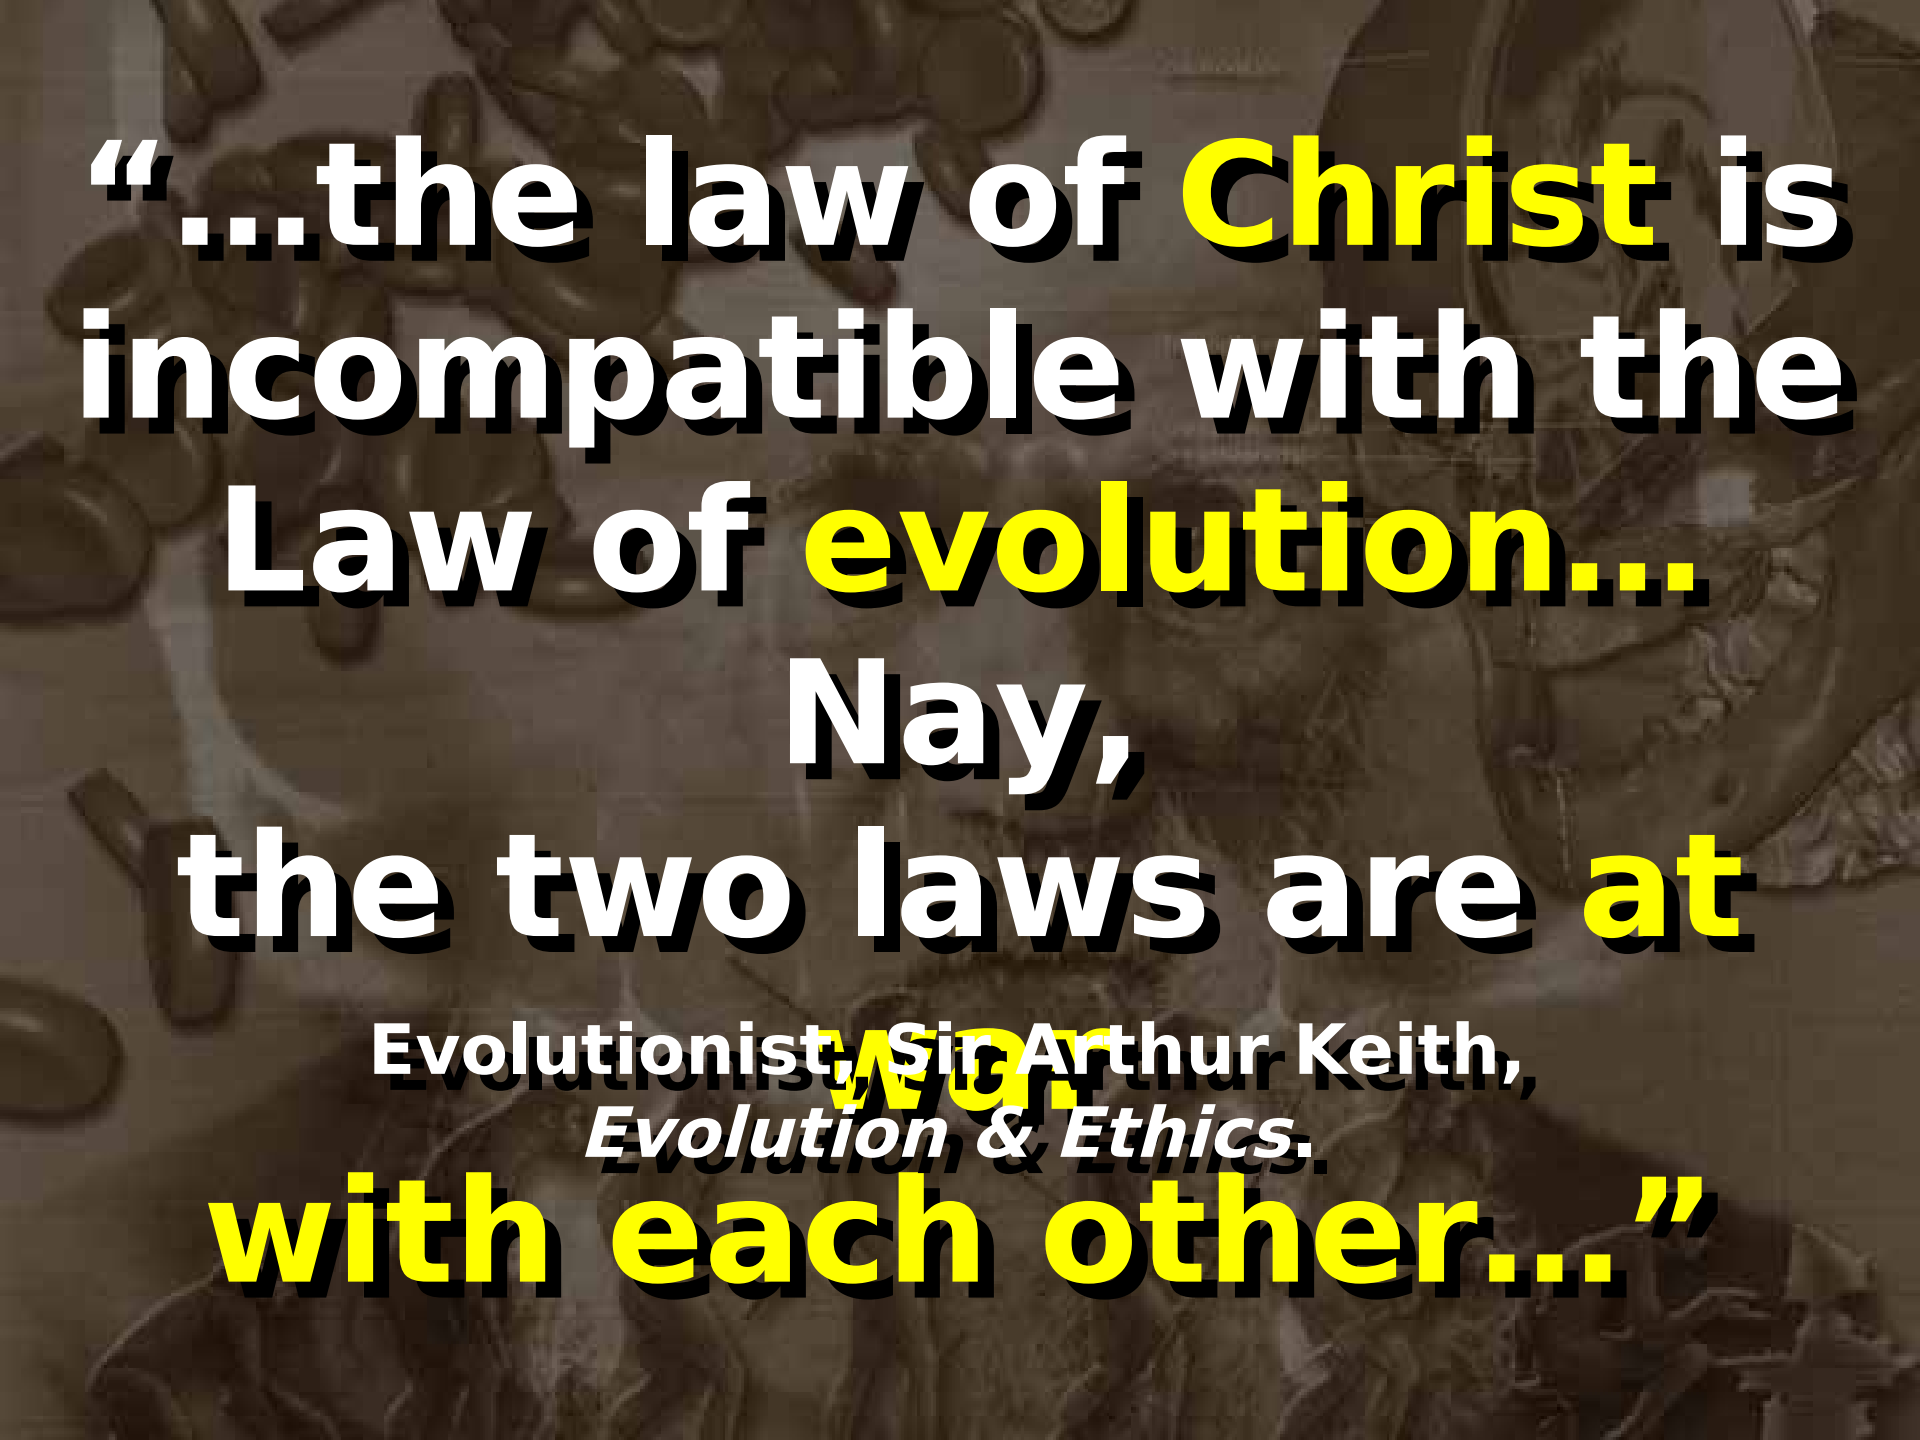

Humanist world-view based on evolution:
Man is god and answers to no one.

“Incredible design! There must be a smart designer.”

Creationist world-view:
God is God and

“…the law of Christ is incompatible with the Law of evolution…
Nay,
the two laws are at war
with each other…”
Evolutionist, Sir Arthur Keith,
Evolution & Ethics.

Four Great Questions

1. **Who** am I (and what am I worth?)
2. **Where** did I come from?
3. **Why** am I here?
4. **Where** am I going when I die?

In the beginning God created the heaven and the earth.

Genesis 1:1

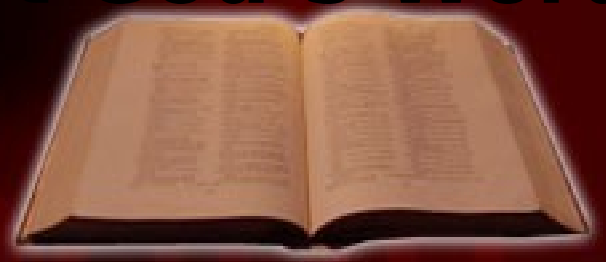

Now the serpent was more subtil than any beast of the field which the LORD God had made. And he said unto the woman, **Yea, hath God said,** Ye shall not eat of every tree of the garden?

(Doubt God's Word)

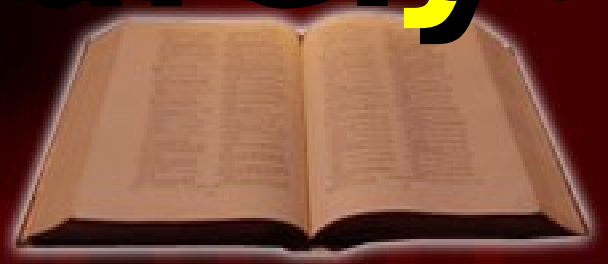

Confusion over Bible versions helps further the doubts. See Sem. 7

Genesis 3:1

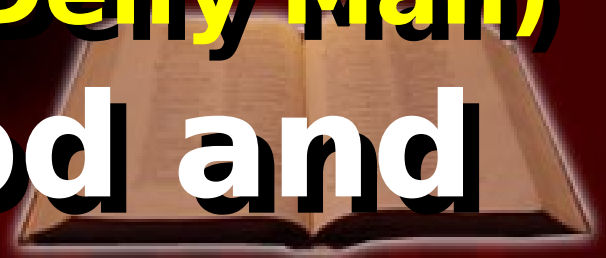

And the serpent said unto the woman, Ye shall not surely die:

(Deny God's Word)

Genesis 3:4

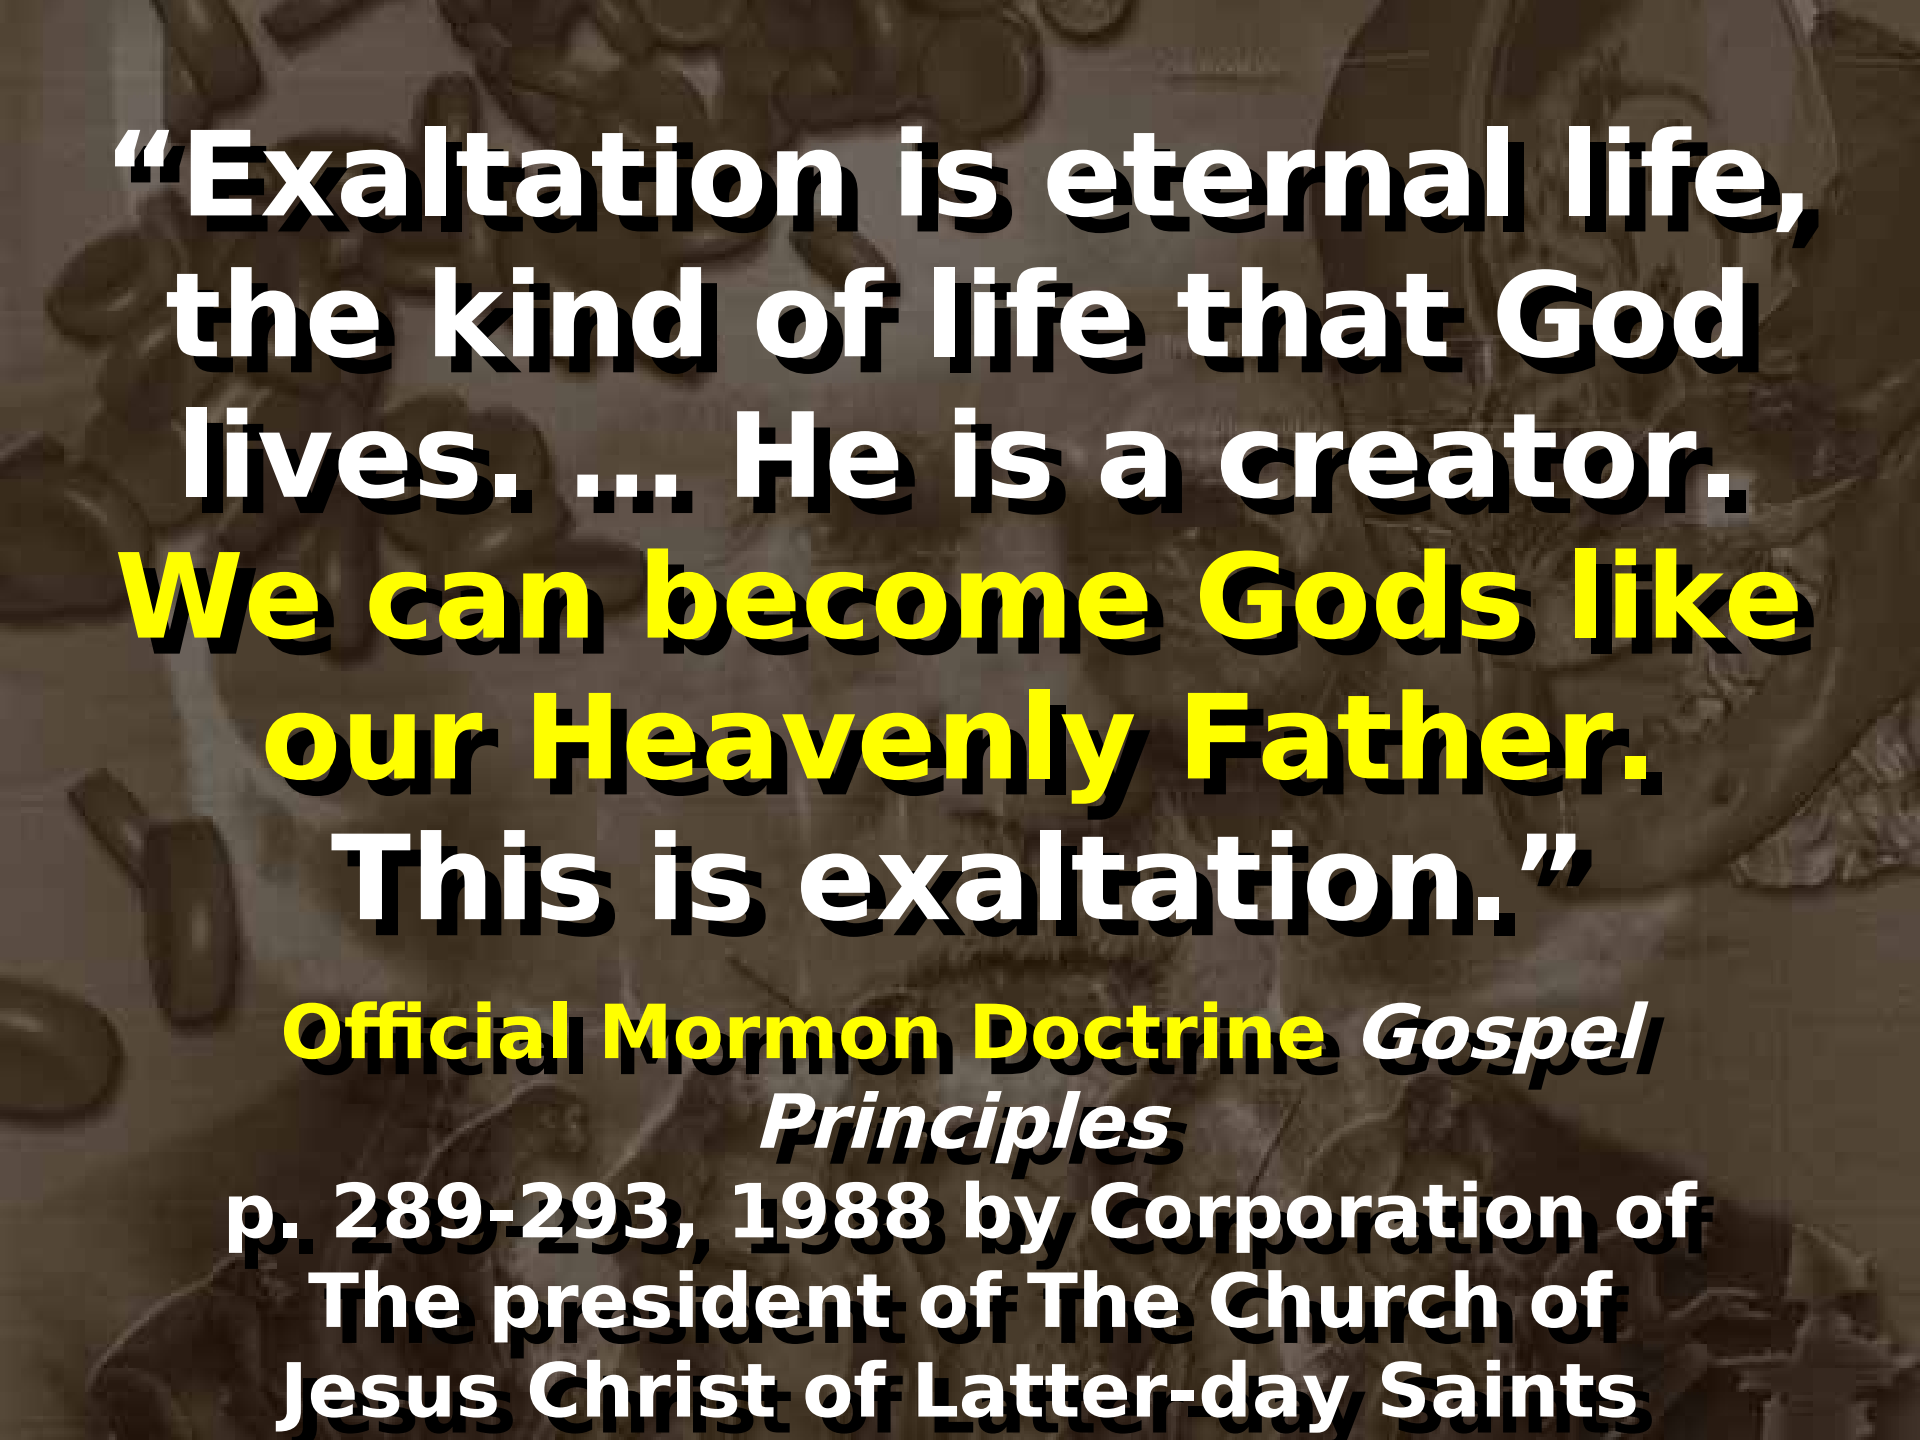

For God doth know that in the day ye eat thereof, then your eyes shall be opened, and **ye shall be as gods,** **(Deify Man)** knowing good and evil.

Genesis 3:5

"Exaltation is eternal life, the kind of life that God lives. ... He is a creator. **We can become Gods like our Heavenly Father.** This is exaltation."

Chapter Three

Life Long Ago

Time Allotment: Allow twelve 15-minute science periods to complete this chapter.

Chapter Overview

Earth has changed much since its formation 4.5 billion years ago. Some life on Earth has adapted to these changes. Other life, such as the dinosaurs, was not able to adapt and survive changes in environments.

Many different dinosaurs are discussed and illustrated in this chapter. Students will be able to compare and contrast the size, shape, diet, habitat, and mode of locomotion of many of these reptiles that roamed Earth millions of years ago.

The concept of extinction is presented and discussed. Extinctions have taken place throughout Earth's history. The extinctions at the close of the Mesozoic Era, however, affected numerous land and marine plants and animals. Hypotheses to explain extinction encompass biological, climatic, and physical changes on Earth.

Major Concepts

1. Earth and its life forms have changed over time.
2. Dinosaurs were reptiles that differed in size, shape, diet, habitat, and mode of locomotion.
3. Dinosaurs, along with many other life forms, became extinct at the end of the

The word “Evolution” has many meanings,
only one of which is scientific.

1. **Cosmic Evolution:** the origin of time, space and matter, i.e. **Big Bang.**

The word “Evolution” has many meanings,
only one of which is scientific.

1. Cosmic Evolution: the origin of time, space and matter, i.e. Big Bang.
2. Chemical Evolution- the origin of higher elements from hydrogen.

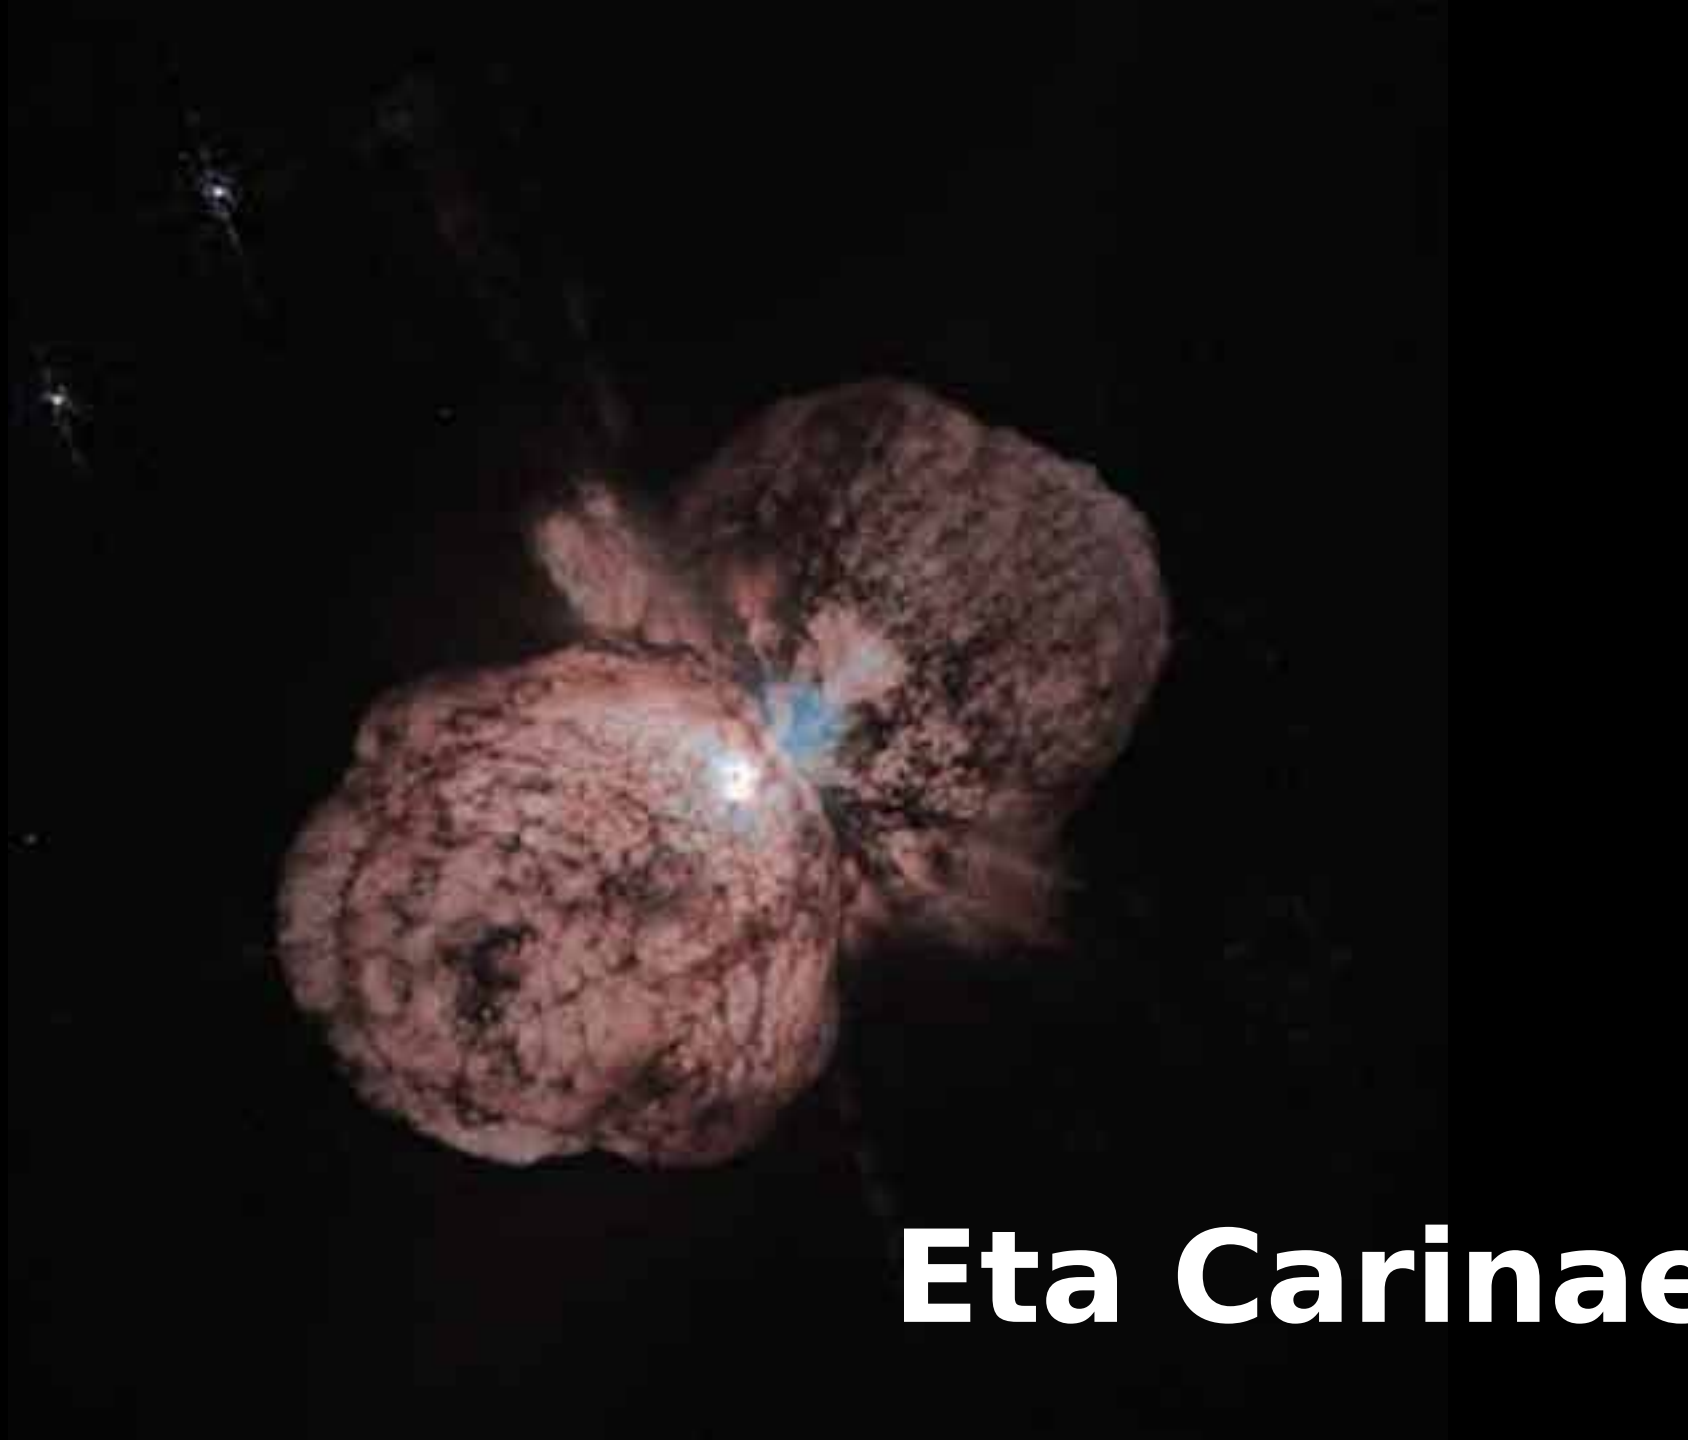

If the “Big Bang” produced hydrogen and some helium, how did the other 105 elements evolve?

The word “Evolution” has many meanings,
only one of which is scientific.

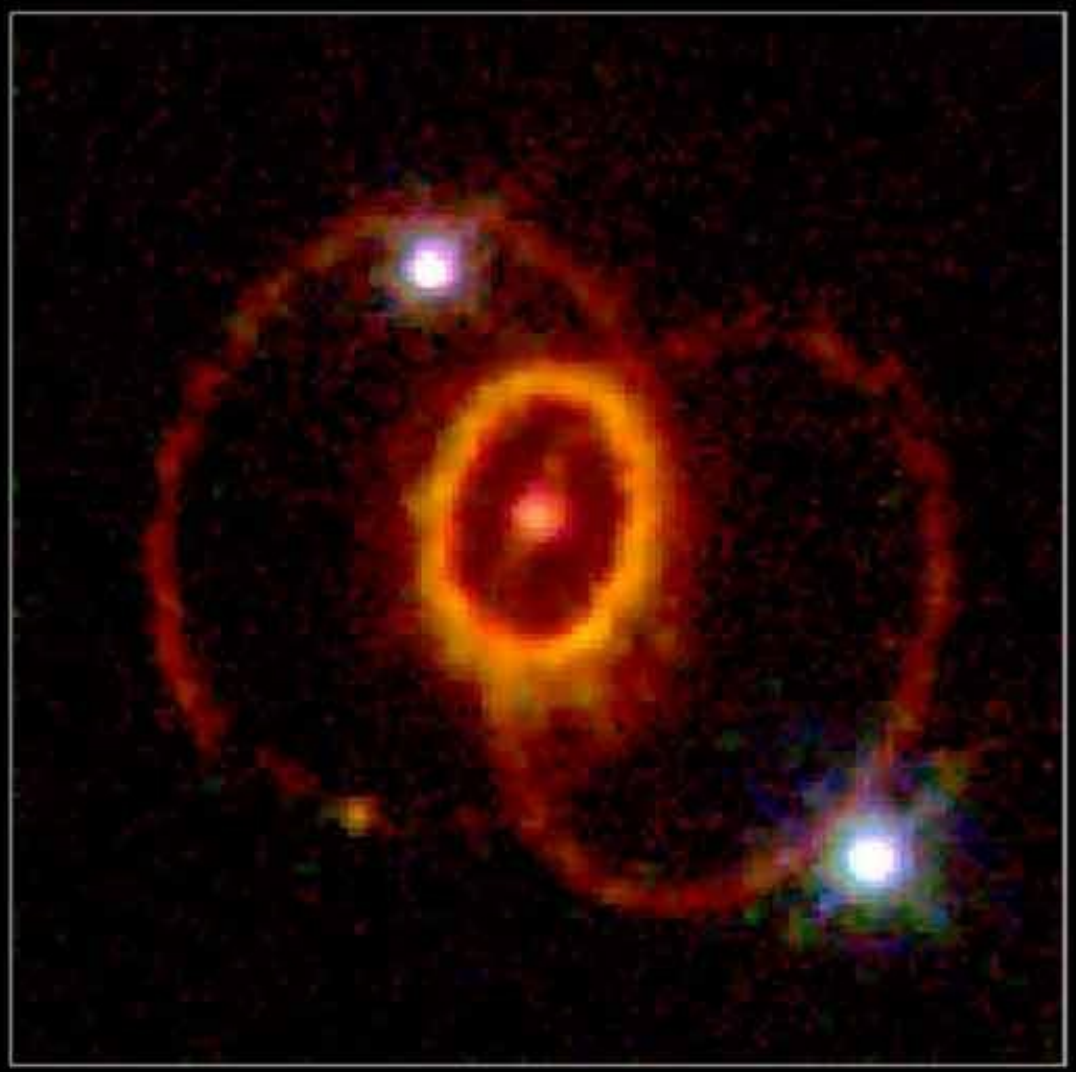

1. Cosmic Evolution: the origin of time, space and matter, i.e. Big Bang.
2. Chemical Evolution- the origin of higher elements from hydrogen.
3. **Stellar and Planetary evolution.**
   Origin of stars and planets. No one has ever seen a star form.

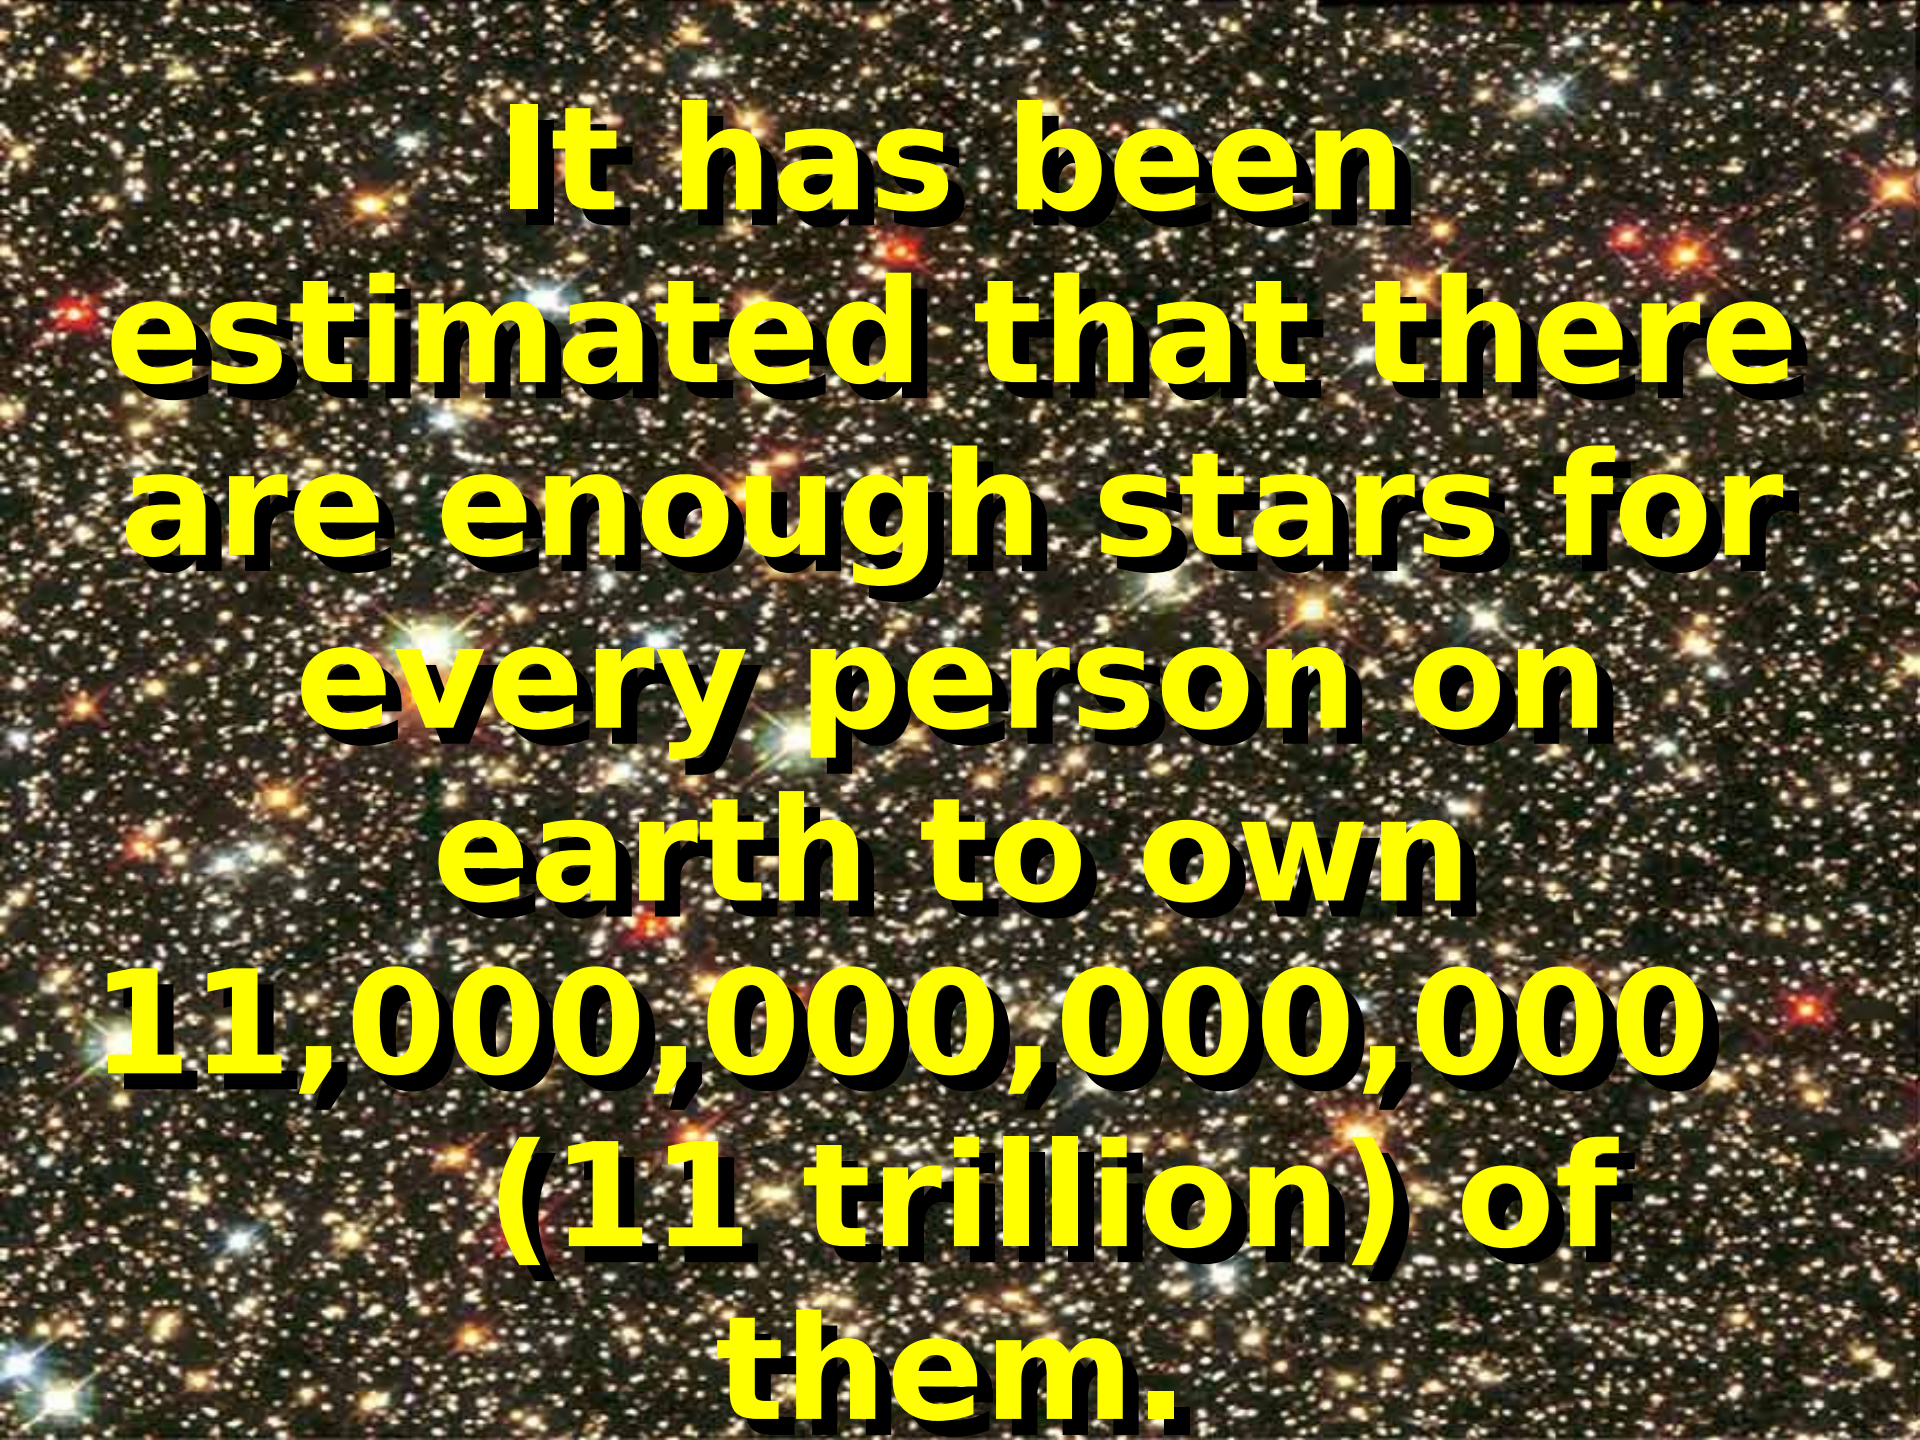

“The silent embarrassment of modern astrophysics is that we do not know how even a single one of these stars managed to form.”

Martin Harwit, *Science*, vol. 231, 7 March 1986,
p. 1201-1202

Eta Carinae

About every 30 years a star is observed exploding. This is called a **nova or supernova**.

It has been estimated that there are enough stars for every person on earth to own 11,000,000,000,000 (11 trillion) of them.

$$\frac{0,000,000,000,000,000,000,000 \text{ stars}}{20,000,000,000 \text{ years}}$$

$$\frac{3,500,000,000,000}{1 \text{ year}}$$

$$\frac{6,655,000}{1 \text{ minute}}$$

We should see 6 ½ million new stars forming every minute for 20 billion years to make what we can see

In the beginning God created the heaven and the earth.

Genesis 1:1

people as a complete break with the past. While this age does owe a vast debt to traditional religions, it is none the less obvious that any religion that can hope to be a synthesizing and dynamic force for today must be shaped for the needs of this age. To establish such a religion is a major necessity of the present. It is a responsibility which rests upon this generation. We therefore affirm the following:

First: Religious humanists regard the universe as self-existing and not created.

Second: Humanism believes that man is a part of nature and that he has emerged as the result of a continuous process.

"Humanists regard the universe as self existing and not created."

Humanist Manifesto 1 (1933) Tenent #1

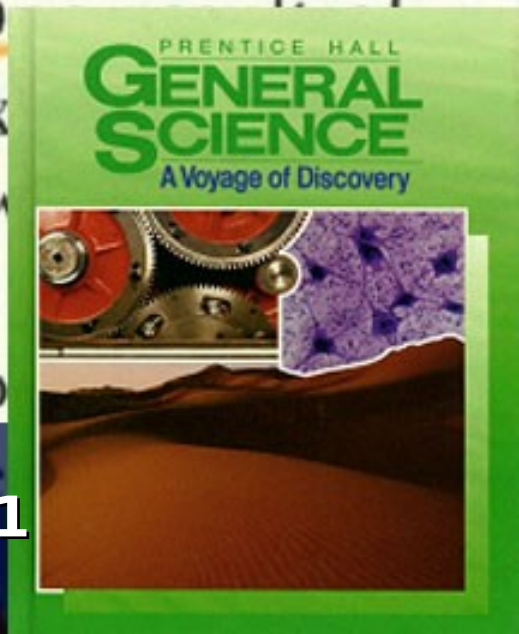

Textbooks often have the "U" capitalized to deify universe.

Big Bang!

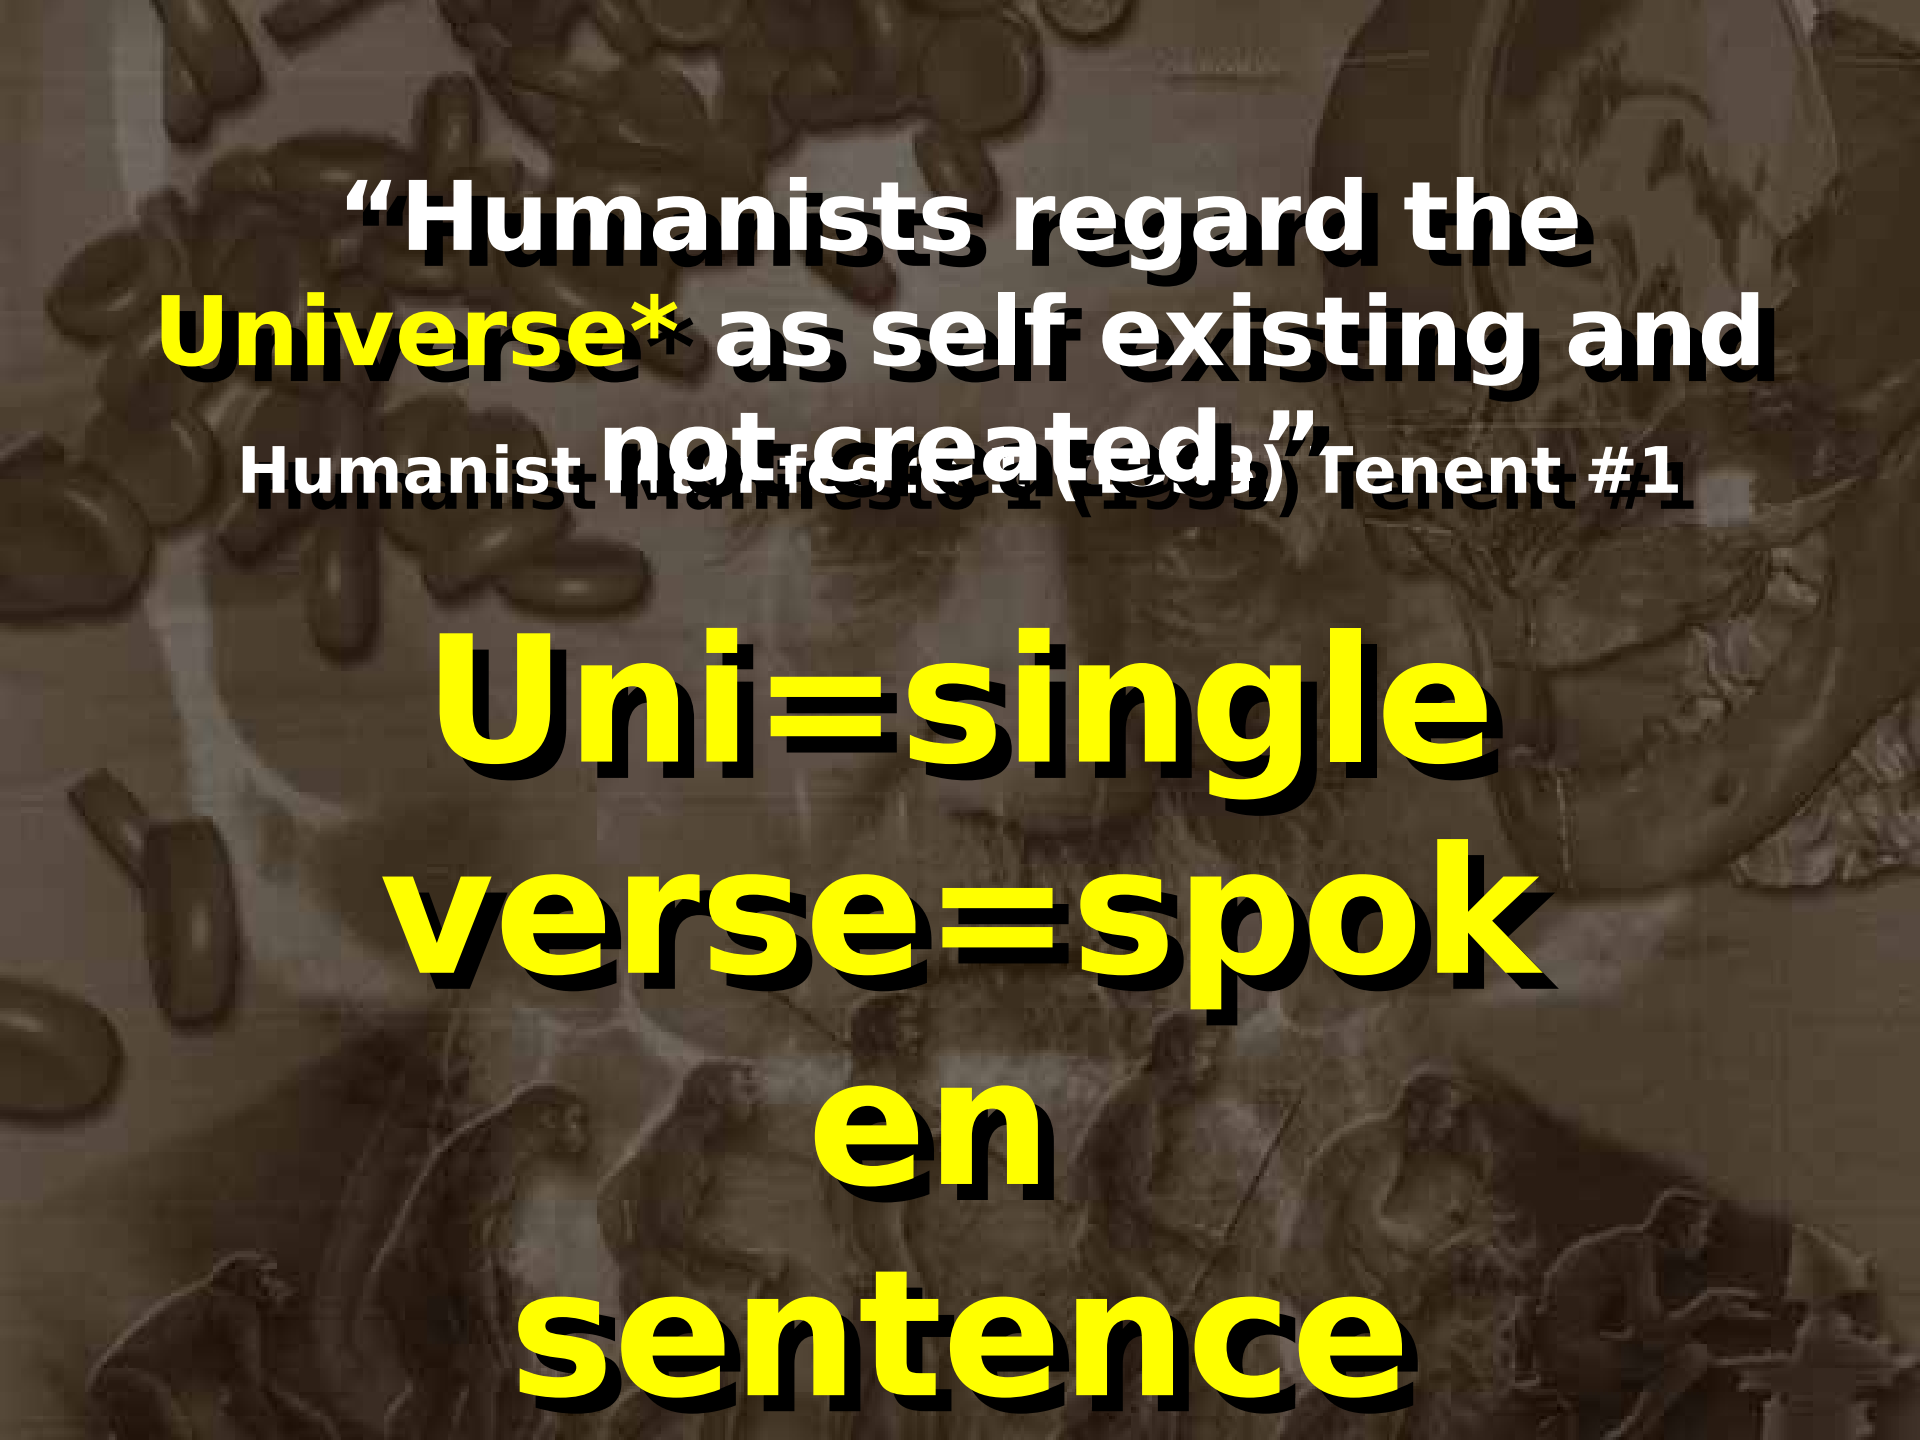

The Birth and Death of the Universe

How was the universe born and how will it end? Most astronomers believe that about 18 to 20 billion years ago all the matter in the universe was concentrated into one very dense, very hot region that may have been much smaller than a period on this page. For some unknown reason, this region exploded. This explosion is called the **big bang.** O
the big bang was the formation of galax

a halt. Then gravity will begin to pull the back toward the center of the universe. is happens, every galaxy will begin to show ift in its spectrum. Recall that a blue shift at a galaxy is moving toward the Earth. e galaxies race back toward the center of rse, the matter and energy will again come closer and closer to the central area. After many billions of years, all the matter and energy will once again be packed into a small area. This area may be no larger than the period at the end of this sentence. Then another big bang will occur. The formation of a universe will begin all over again. A universe that periodically expands and then contracts back on itself is called a closed universe. In a closed universe, a big bang may occur once every 80 to 100 billion years.

17.6 The Origin of the Universe

If the universe is expanding, then it must have once been much smaller. If you could run the life of the universe in reverse, like a film, you would see the universe contracting until it disappeared in a flash of light, leaving nothing.

In the realm of the universe, *nothing* really means *nothing*. Not only matter and energy would disappear, but also space and time. However, physicists theorize that from this state of nothingness the universe began in a gigantic explosion about 16.5 billion years ago. This theory of the origin of the universe is called the **Big Bang theory**. The Big Bang theory does not exp[lain] the universe began. The theory only explains existing universe could have developed.

HBJ *General Science*, 1989, p. 362

The big bang idea began with a Belgian astronomer, Georges Edward Lemaitre (1894-1966).
According to Isaac Asimov, Lemaitre conceived
this mass to be “no more than a few light-years
in diameter.” At the very least, that would be
two light-years or about twelve trillion miles.
by 1965 that figure was reduced
to 275 million miles,
by 1972 to 71 million miles,
by 1974 to 54 thousand miles,

matter in the nebula toward its center. As the nebula shrank, it spun faster and faster. Gradually, the spinning nebula flattened into a huge disk almost 10 billion kilometers across. At the center of the disk a growing protosun, or new sun, began to take shape.

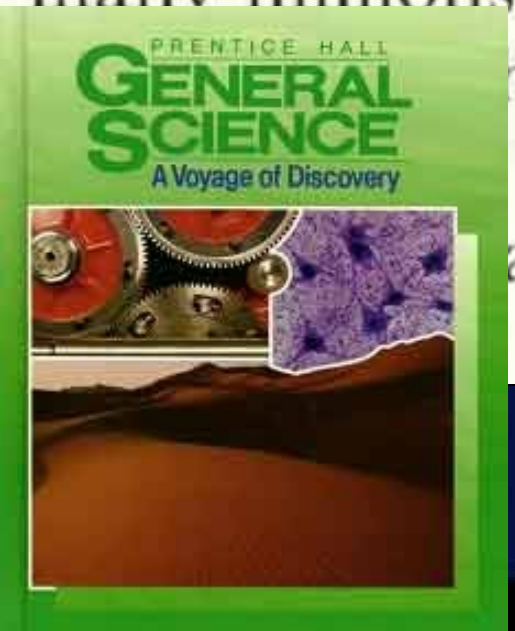

As the gas cloud continued to collapse toward its center, the protosun grew more and more massive. It became denser as well. In time, perhaps after many millions of years, gravitational forces caused the atoms of hydrogen in the protosun to fuse and form helium. This fusion gave off energy in the form of heat and light. A star—our sun—was born.

Figure 3-2 *The nebular theory suggests how our solar system may have begun. In this theory, shock waves from a supernova pass through a nearby nebula, or gas cloud* (left). *The nebula begins to rotate, and gravity pulls more and more matter in a central disk* (center). *That disk will become the sun. Clumps of gas and dust form around the central disk, producing protoplanets and other objects that will make up the solar system* (right).

"The nebula begins to rotate."

matter in the nebula toward its center. As the nebula shrank, it spun faster and faster. Gradually, the spinning nebula flattened into a huge disk almost 10 billion kilometers across. At the center of the disk a growing protosun, or new sun, began to take shape.

As the gas cloud continued to collapse toward its center, the protosun grew more and more massive. It became denser as well. Religious and scientific leaders debate evolution

Roger O'Dell is a good neighbor. This man of God loves El Paso and has served tirelessly to make it a better place for all of us.

One of Roger's passions is the creation vs. evolution debate. He believes the opening sentence of the Bible is true: "In the beginning God created the heavens and the earth." (Genesis 1:1) What do you think? What do your neighbors believe?

Now's our chance to learn more about this important is-

Year of the Neighbor

nservation of Angular Momentu

Conservation of Angular Momentu

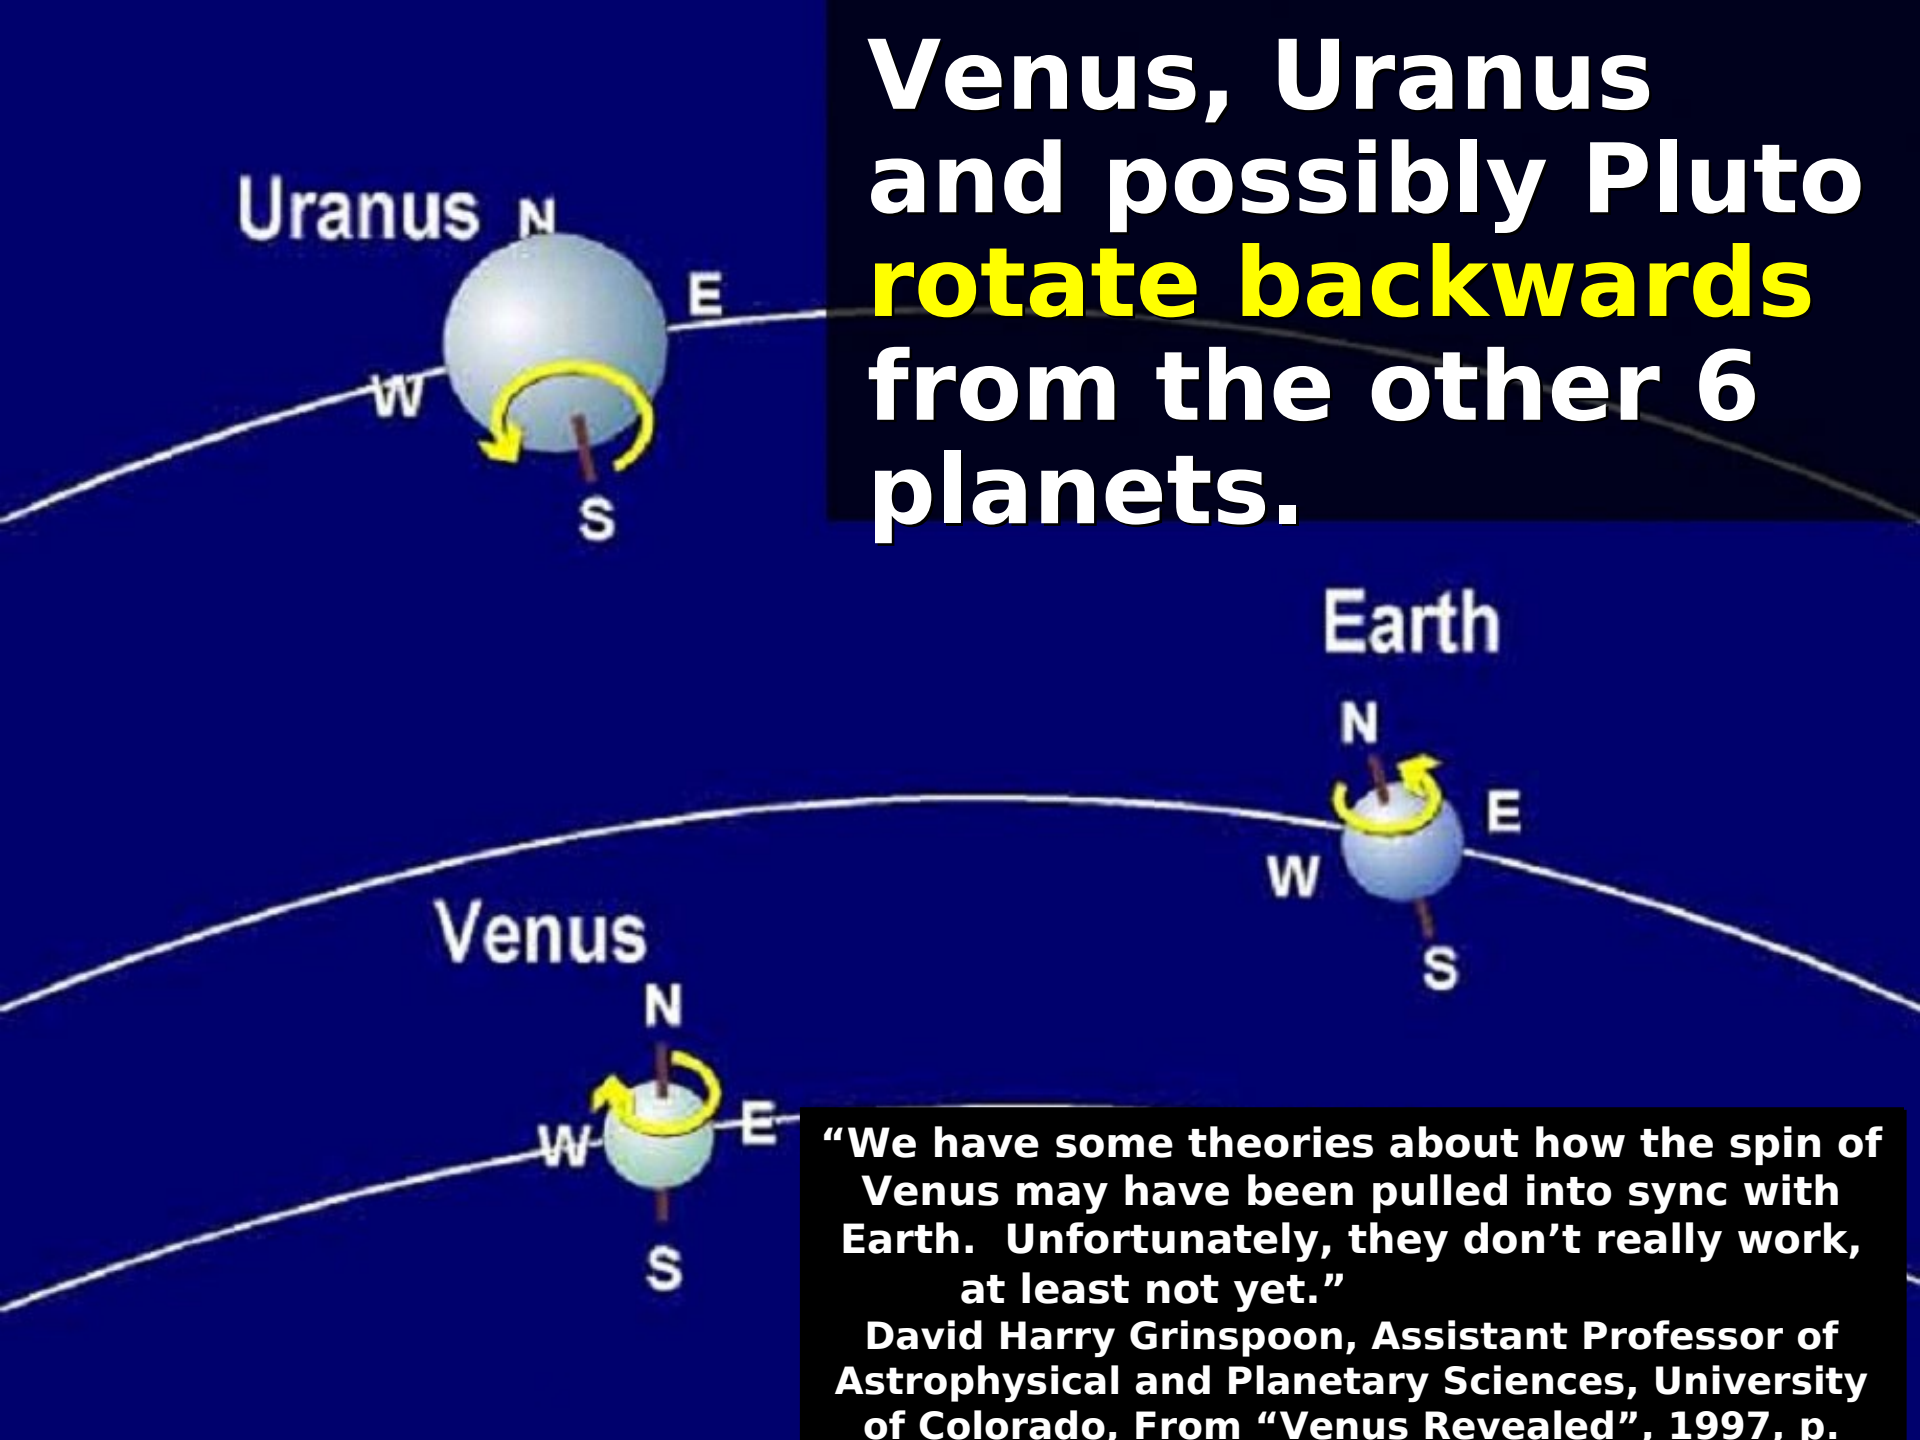

“This (Angular Momentum) would have caused the sun to spin very rapidly. Actually, our sun spins very slowly, while the planets move very rapidly around the sun. In fact, although the sun has over 99% of the mass of the solar system, it has only 2% of the angular momentum. This pattern is directly opposite to the pattern predicted for the nebular hypothesis.”
Dr. H. Reeves The Origin of the Solar System, in *The Origin of the Solar System, Dermott, S.F. Ed. John Wiley & Sons, New York p. 9, 1978.*

“The ultimate origin of the solar system’s angular momentum remains obscure.” Well-known solar-system Evolutionist scientist, Dr. Stuart Ross Taylor, *Solar System Evolution: A New Perspective,* Cambridge University Press, p. 53, 1992.

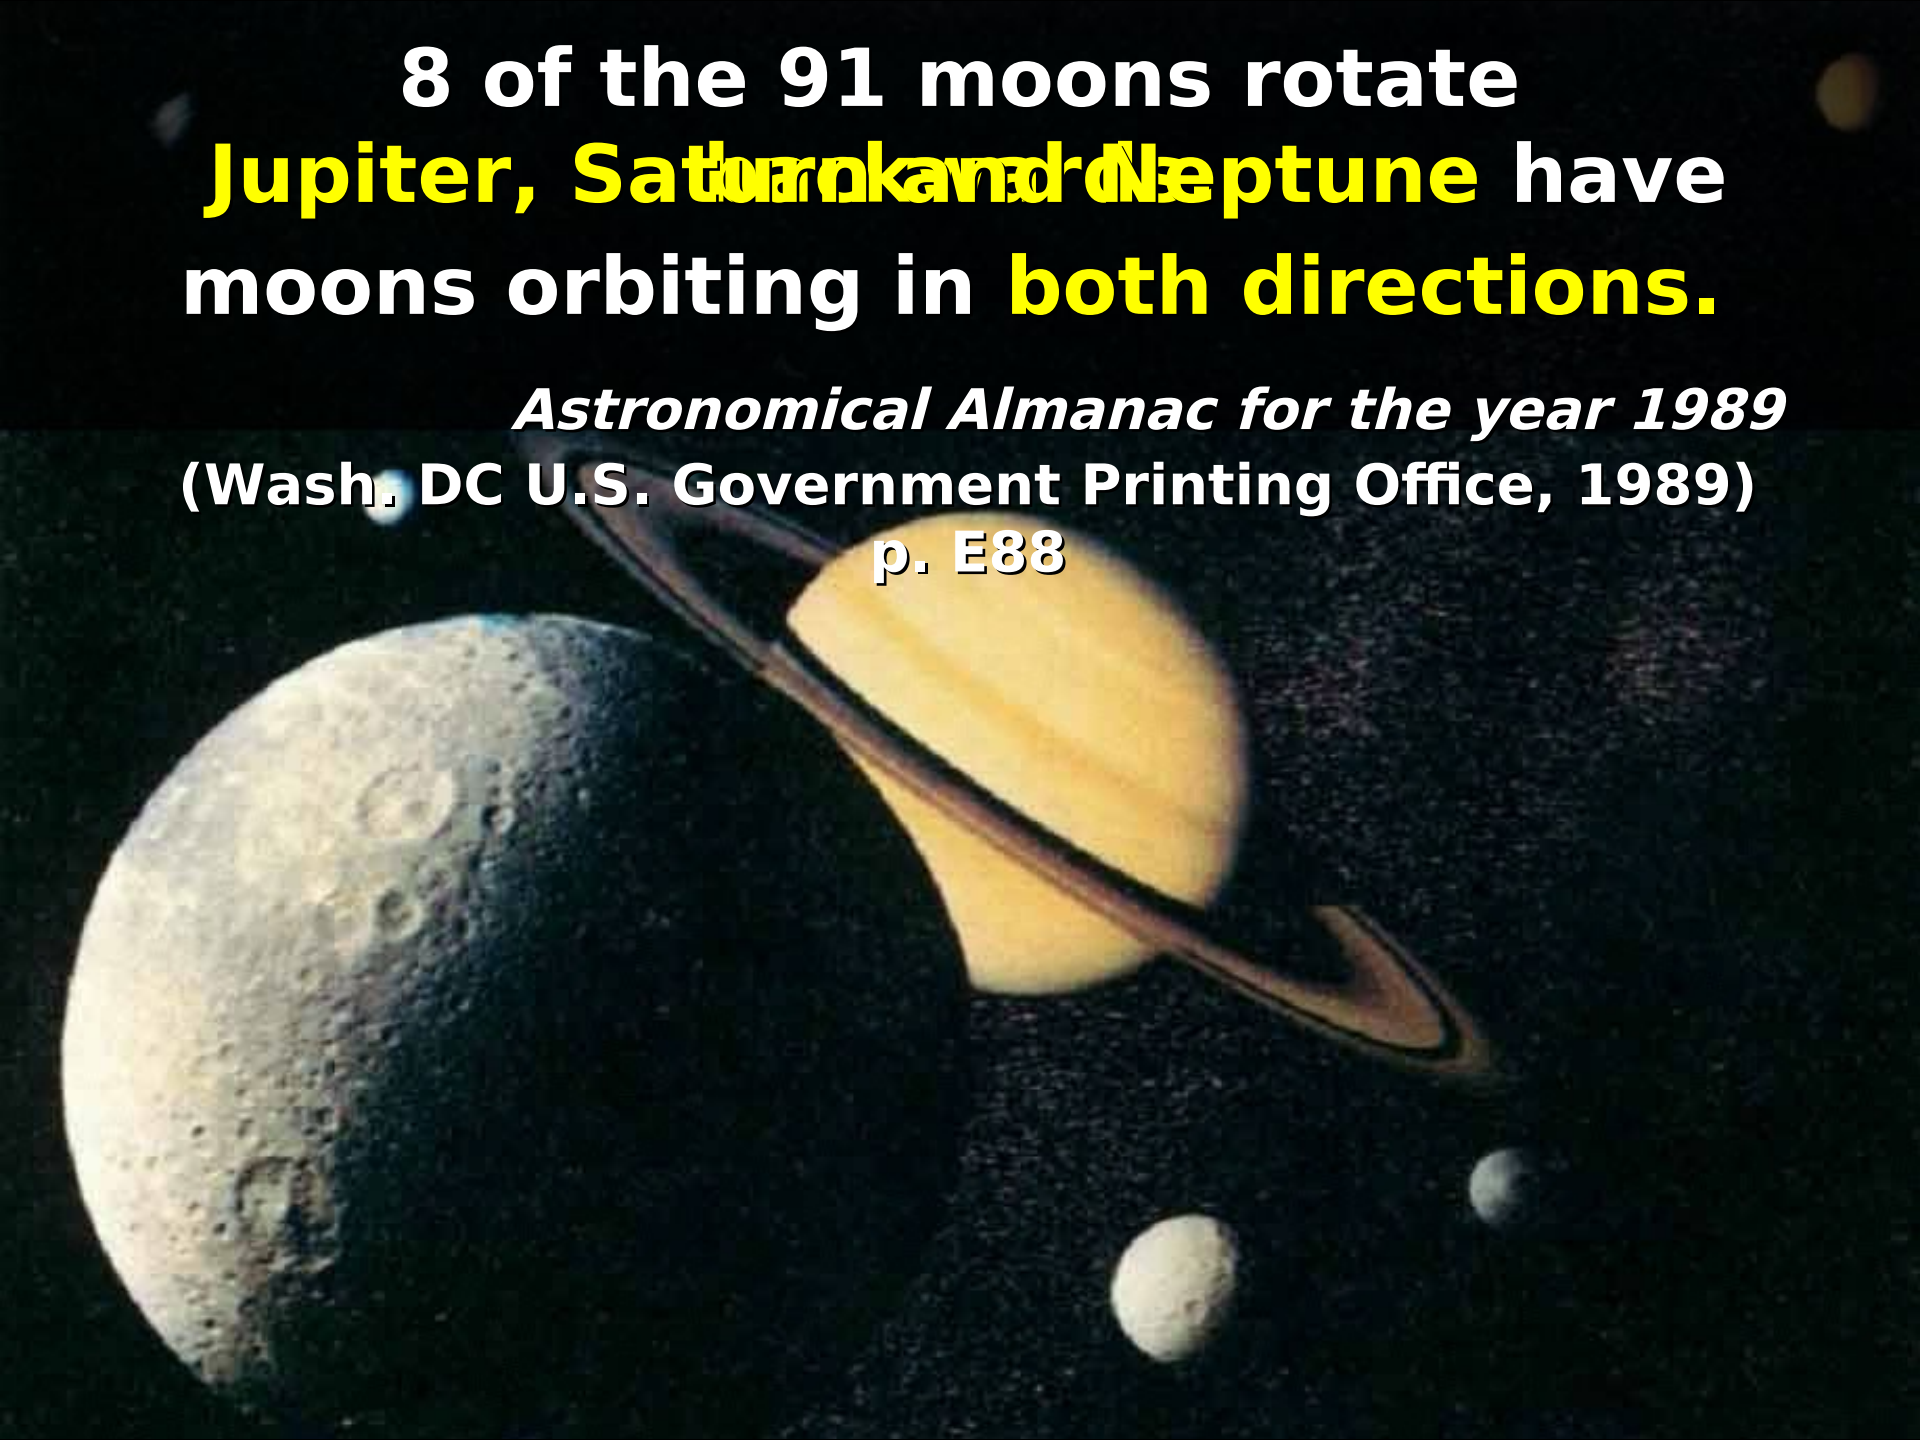

“One of the detailed problems is then to explain how the Sun itself acquires nearly 99.9% of the mass of the solar system but only 2% of its angular momentum.”
Frank D. Stacey, “Physics of the Earth”, 1969, p. 4

Venus, Uranus and possibly Pluto rotate backwards from the other 6 planets.

"We have some theories about how the spin of Venus may have been pulled into sync with Earth. Unfortunately, they don't really work, at least not yet."

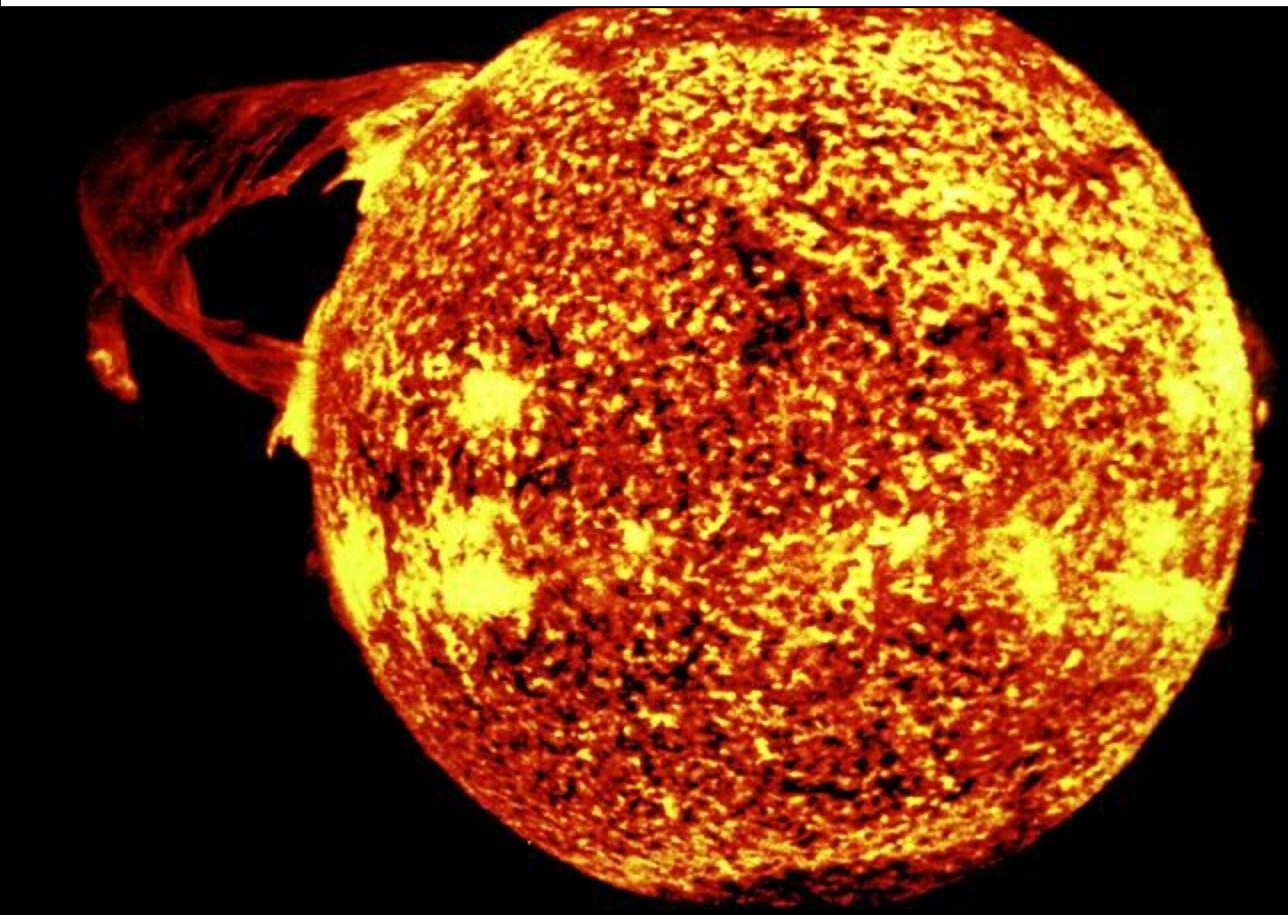

David Harry Grinspoon, Assistant Professor of Astrophysical and Planetary Sciences, University of Colorado, From "Venus Revealed", 1997, p.

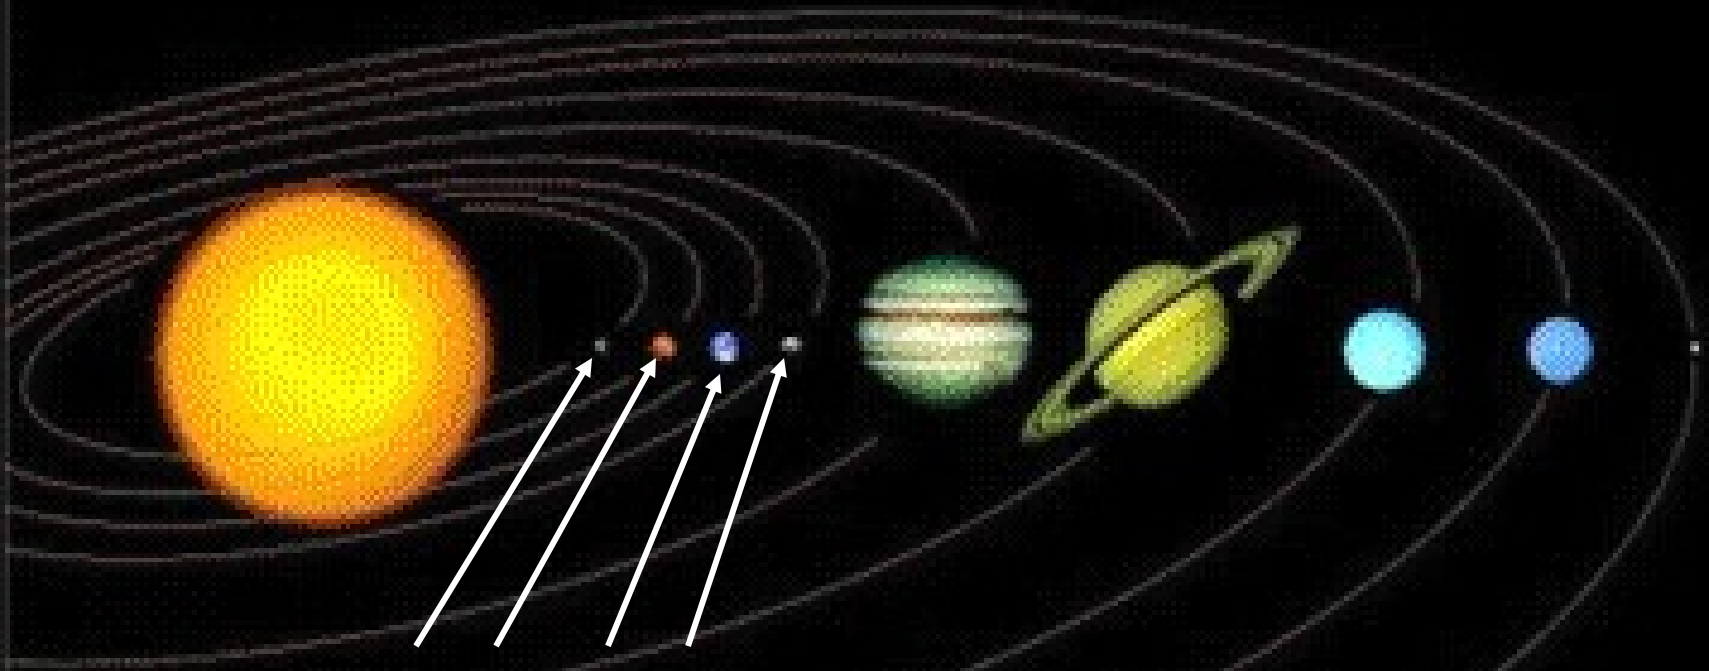

8 of the 91 moons rotate

Goofy galaxy spins in wrong direction

February 11, 2002 Posted: 8:18 AM EST (1318 GMT)

NGC 4622 is more than 100 million light-years from Earth.

By Richard Stenger
CNN Sci-Tech

(CNN) -- A galaxy captured by the camera of the Hubble Space Telescope seems to be rotating in the direction opposite of what it should, astonished astronomers announced this week.

Most spiral galaxies have arms of gas and stars that trail behind as they turn. But this galaxy, known as NGC 4266, has two leading outer arms that point toward the direction of the galaxy's rotation, according to Hubble researchers.

"NGC 4622 suggests that maybe people do not know all that there is know about spiral structure yet. Our study may lead to a new understanding of spiral arm production in galaxies," scientists Ron Buta and Gene Byrd said in an e-mail to CNN. A Hubble observatory photo shoot indicated which edge of the galaxy tilts closer to the Earth, allowing the astronomers to determine the spin of the galactic oddball.

"I believe this kind of structure is rare, if not unique, among the relatively small

In the beginning God created the heaven and the earth.

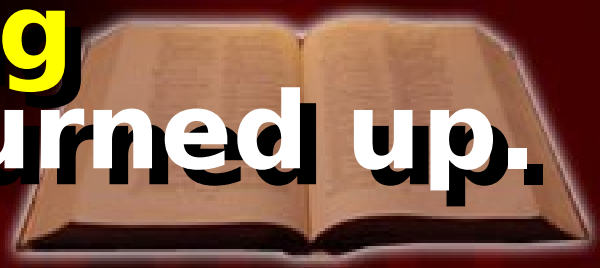

Genesis 1:1

But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise,* and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

2 Peter 3:10

*Big Bang

For God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life.

Why would God send His son to die for a world that was created by a big bang and evolved by natural causes?

John 3:16

If the big bang theory were true the matter would be **evenly distributed.**

Instead it is **"lumpy."** There are clusters of stars then great "voids."

The **"big bang" is a "big dud."**

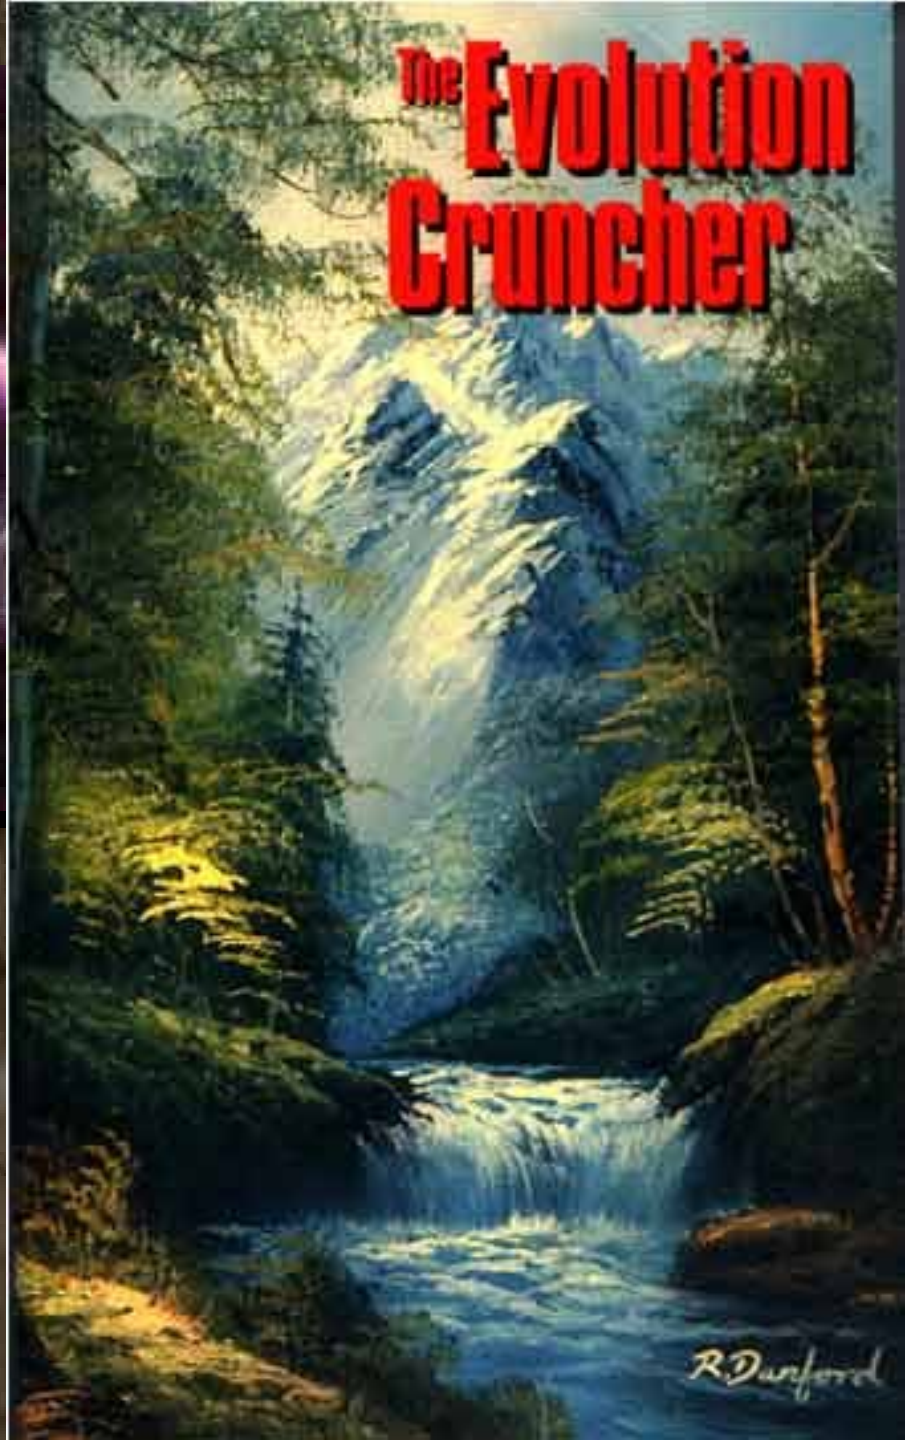

See Creation Ex Nihilo Dec. 99, p. 8

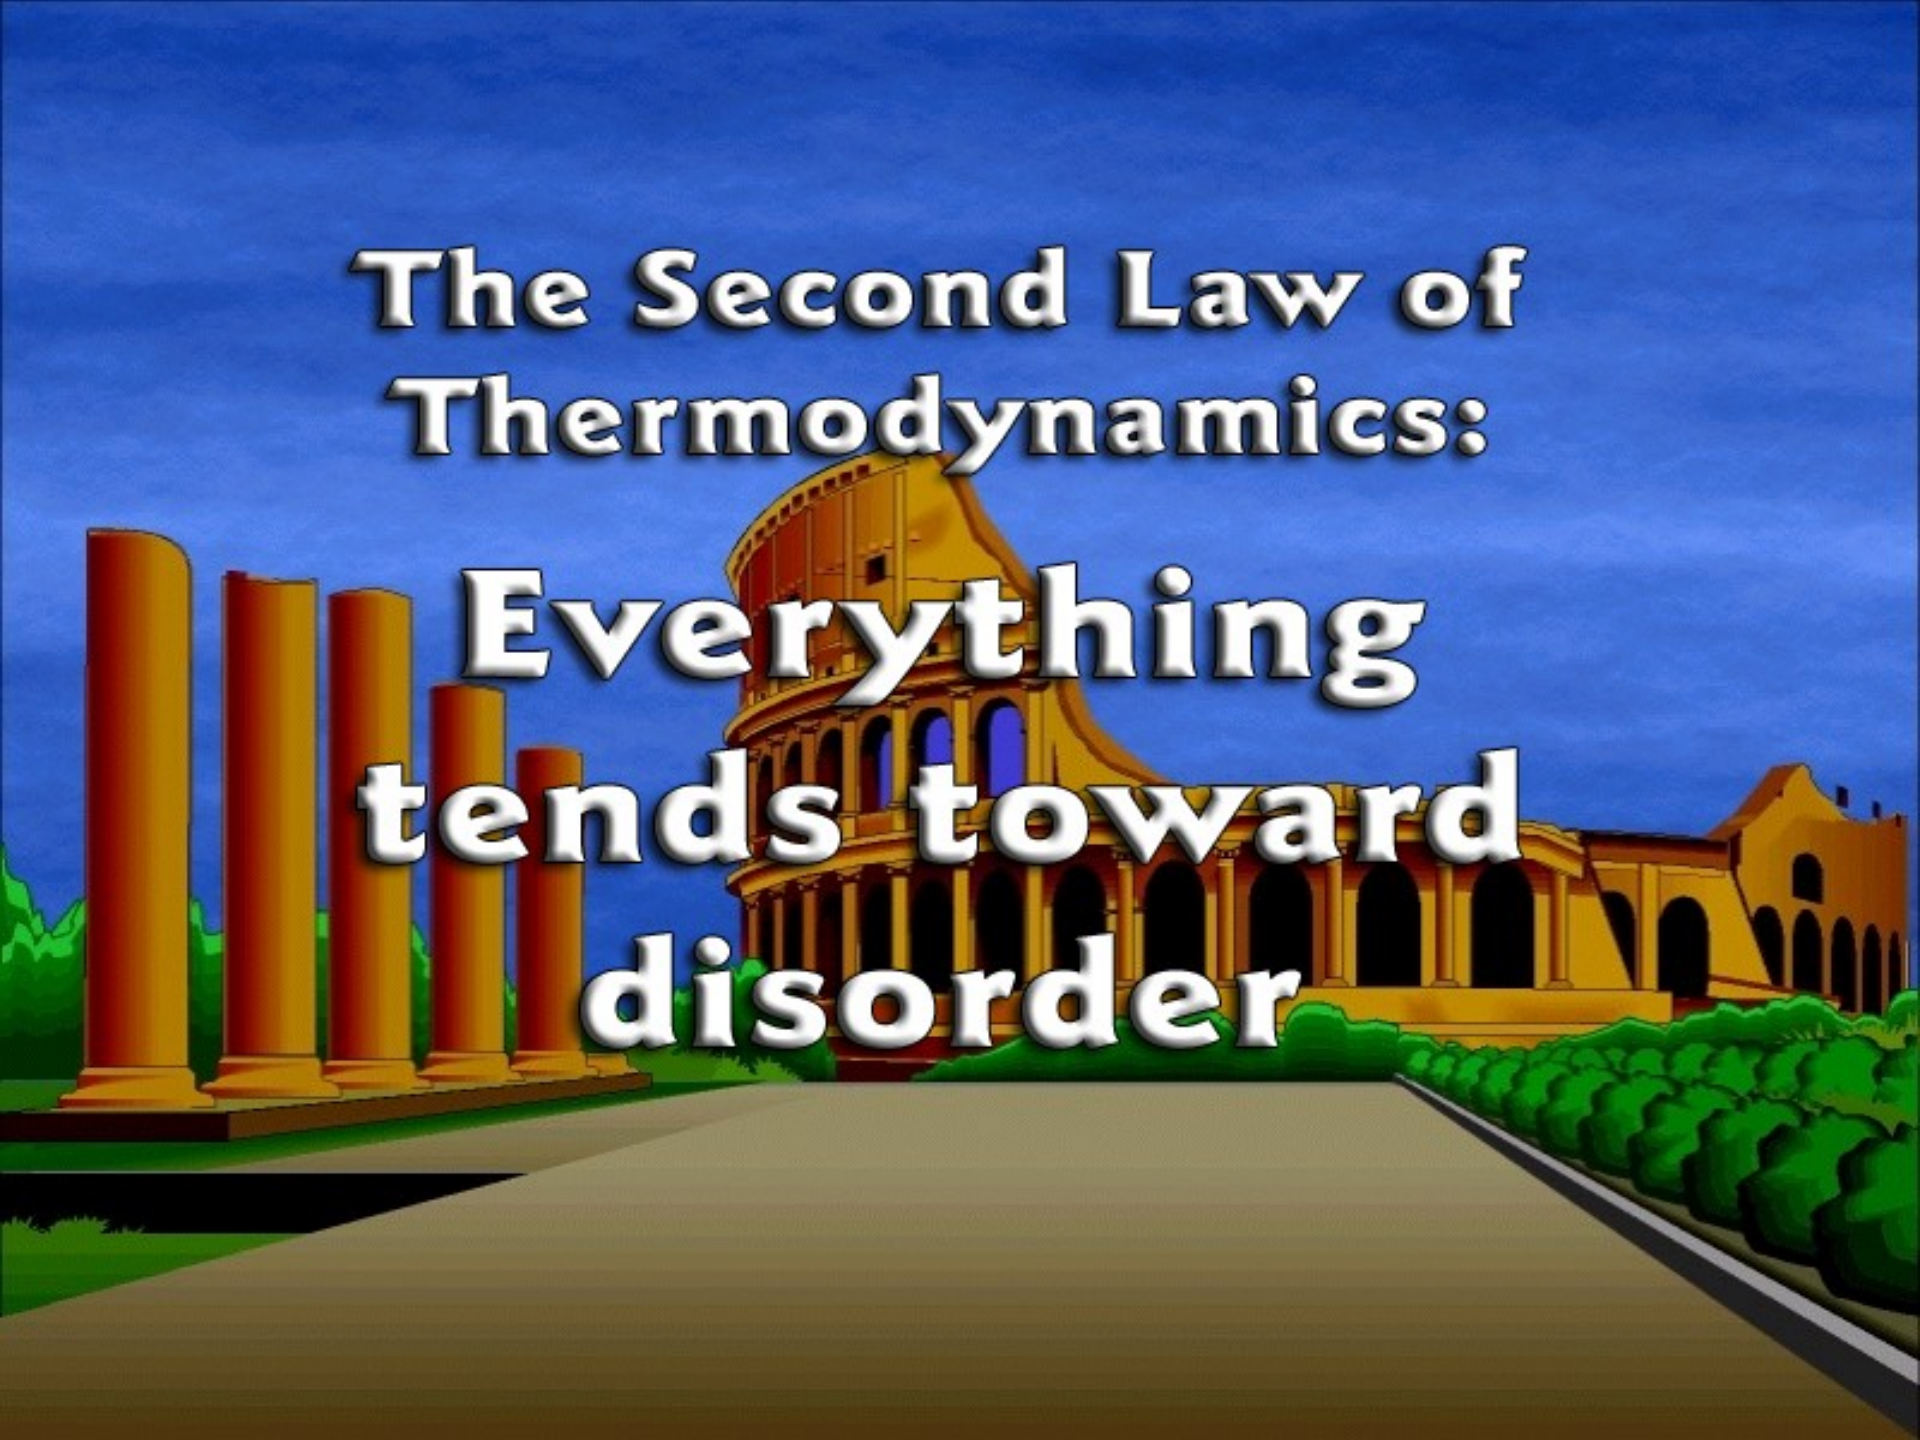

“I have little hesitation in saying that a sickly pall now hangs over the big bang theory”,

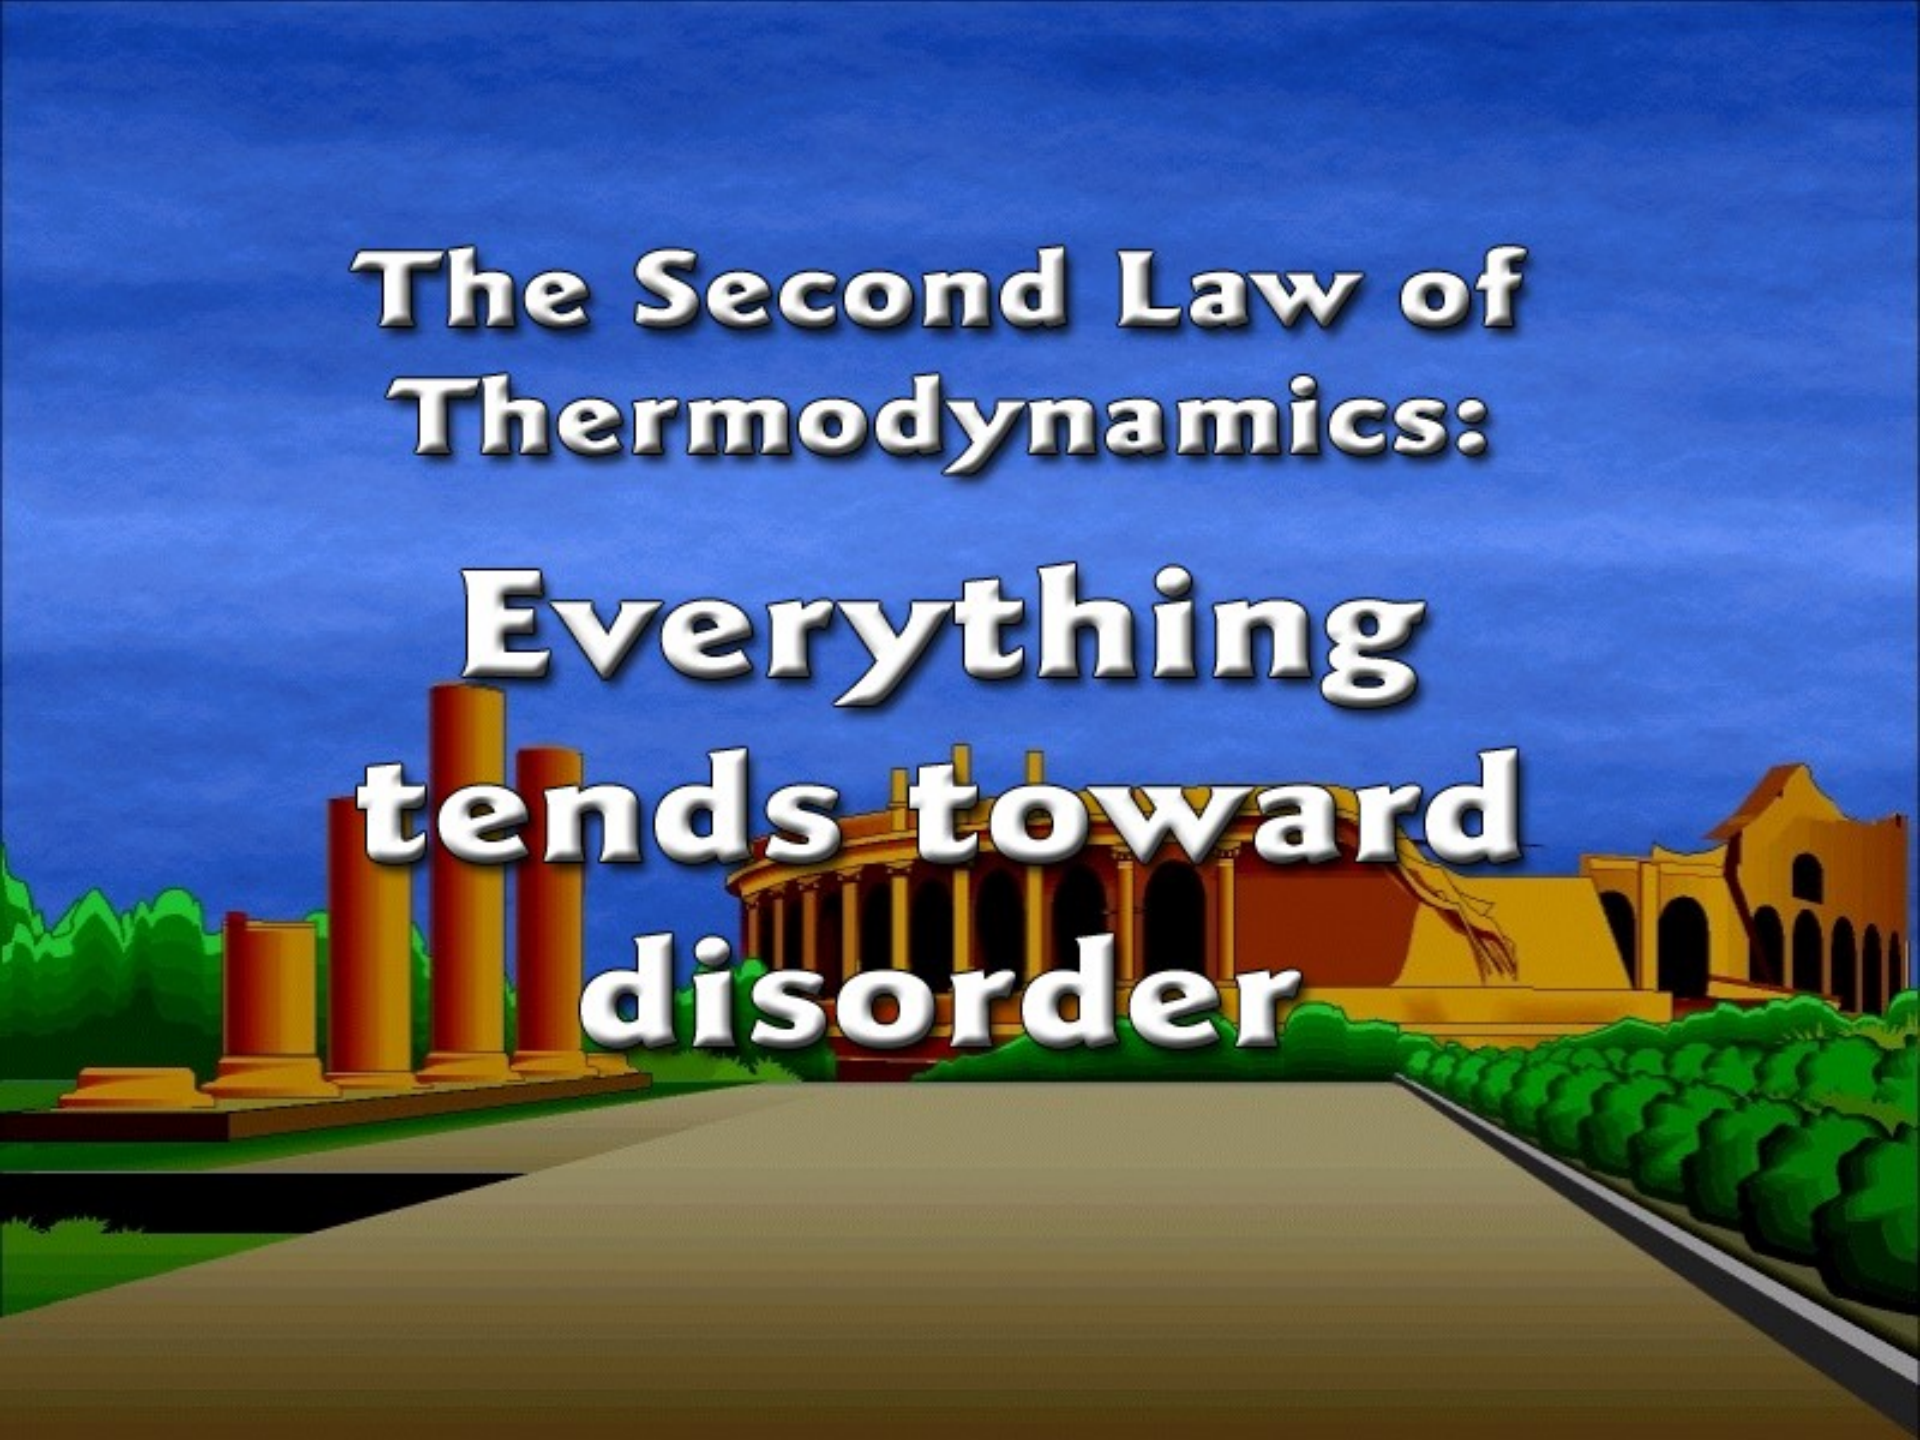

Sir Fred Hoyle, astronomer, cosmologist, and mathematician, Cambridge University, “The Big Bang Theory Under Attack”, Science Digest, Vol. 92 May 1984, p. 84

Total Disorder !

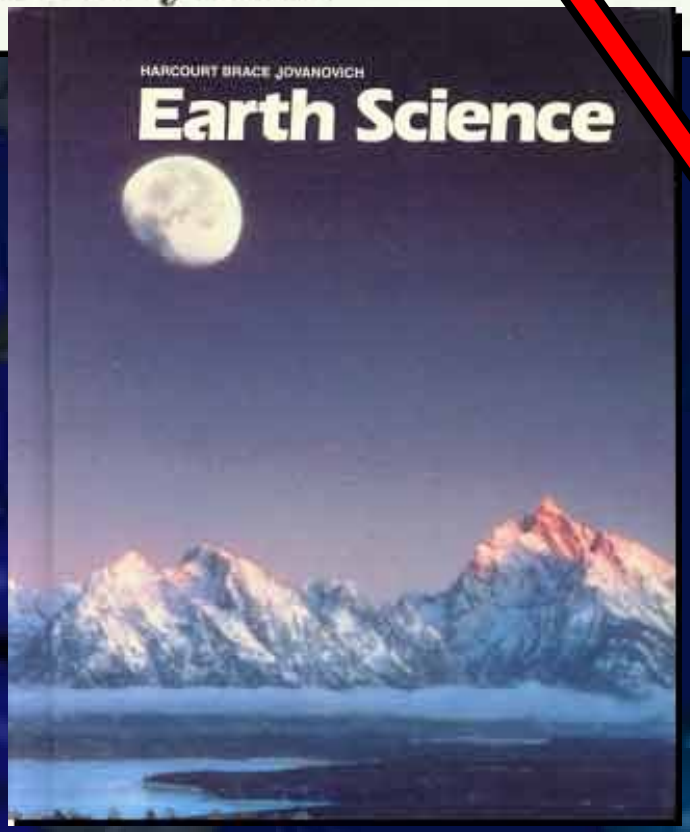

"Another way of stating the second law is, 'The universe is constantly getting more disorderly.' Viewed that way we can see the second law all about us. We have to work hard to straighten out a room, but left to itself it becomes a mess again very quickly and very easily. Even if we never enter it, it becomes dusty and musty. How difficult to maintain houses, and machinery, and our own bodies in perfect working order; how easy to let them deteriorate. **In fact, *all we have to do is nothing, and everything deteriorates, collapses, breaks down, wears out, all by itself*-and that is what the second law is all about.**

Heat loss from building

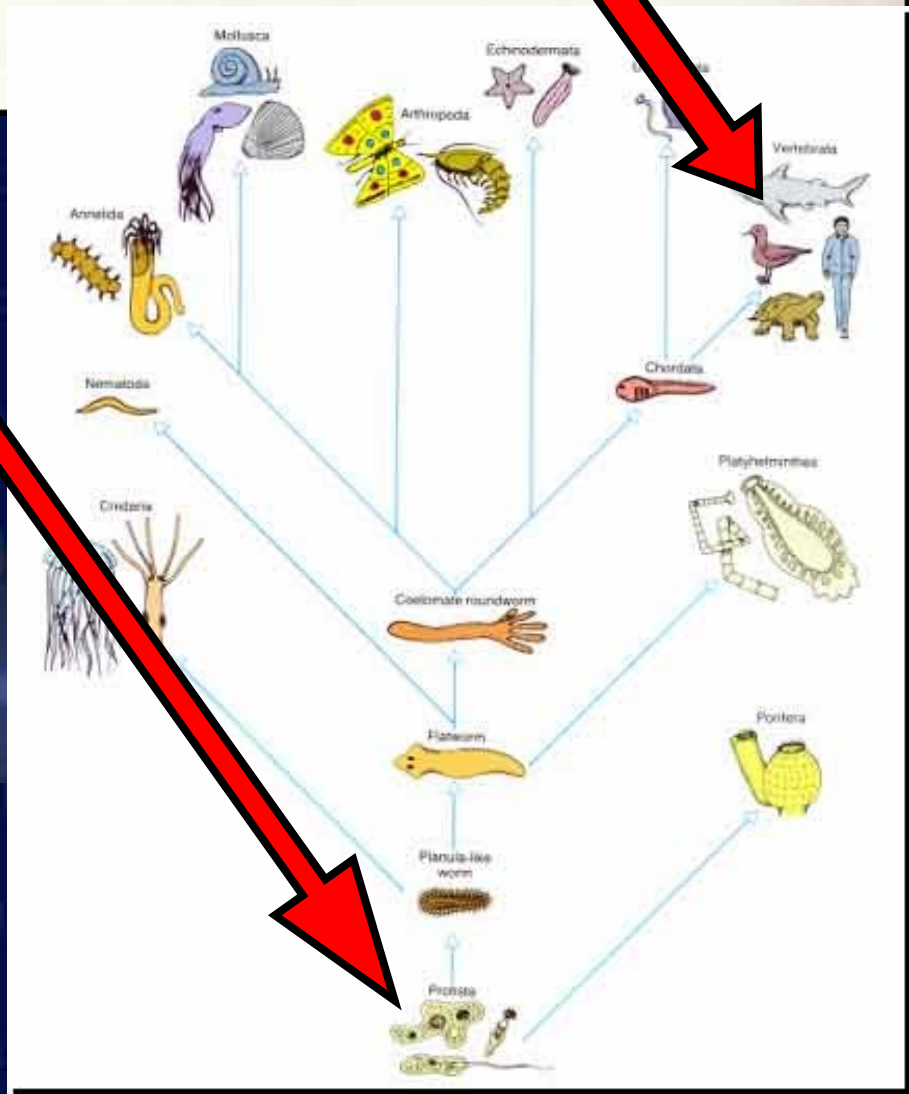

again become plentiful. H.B.J. EARTH SCI. 1989 P. 356

Humans are an important part of the earth environment. Together with every other living organism, humans probably evolved from bacteria that lived more than 4 billion years ago. What kinds of organisms do you think will evolve over the next 4 billion years?

HBJ Earth Science, 1989 p. 356

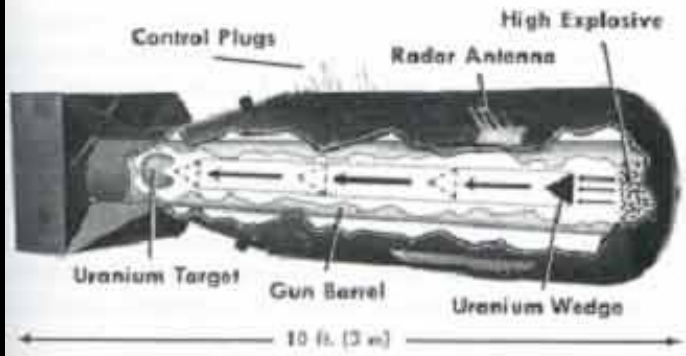

Evolutionists assume that **adding energy** (open system) will overcome the 2nd law of thermodynamics.

1. The universe is a closed system.
2. Adding **energy is destructive** without a complex mechanism to harness the energy.

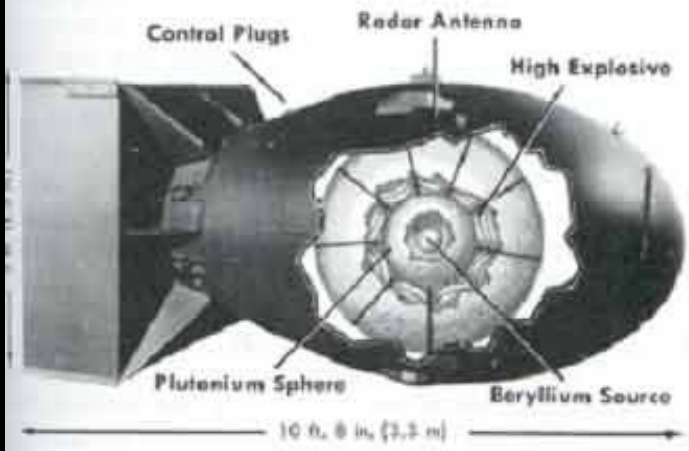

The Japanese added lots of energy to Pearl Harbor in 1941 and did not organize anything!

We added **lots of energy** to Japan to end WW II and **did not organize anything !**

The "Little Boy" Atomic Bomb Destroyed Hiroshima, Japan, Aug. 6, 1945. Over 92,000 persons were dead or missing. The bombardier set the control plugs to arm the 9,000-pound (4,100-kilogram) bomb just before it was dropped from a B-29 bomber. When the bomb reached 1,850 feet (564 meters), a radar echo set off an ordinary explosive inside. This drove a wedge of U^{235} into a larger piece of U^{235}, setting off a blast with the force of 13,000 short tons (11,800 metric tons) of TNT.

Adapted from artwork by Van Dyke, Dec. 28, 1960, *Newsweek*; photographs by Los Alamos Scientific Lab.

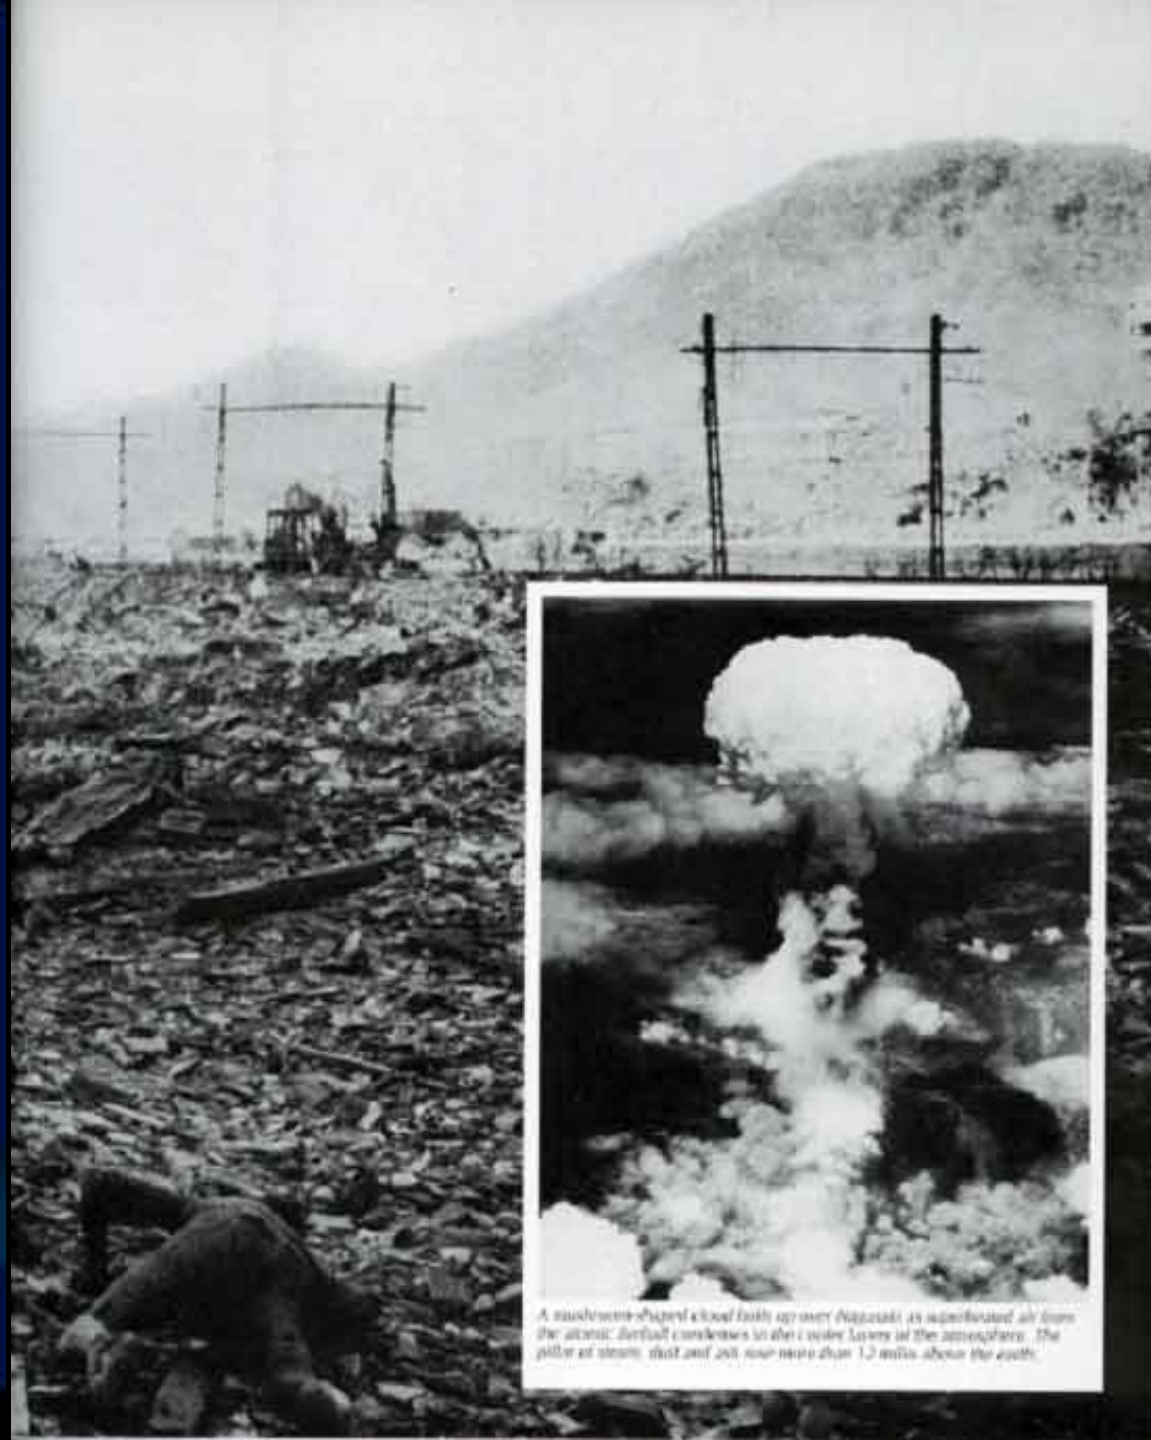

The "Fat Man" Atomic Bomb Destroyed Nagasaki, Japan, Aug. 9, 1945. At least 40,000 persons were dead or missing. Control plugs and a radar antenna on this bomb served the same purpose as those on the "Little Boy" bomb. But the 10,000-pound (4,500-kilogram) "Fat Man" bomb used a more advanced nuclear principle. An ordinary explosive crushed a hollow sphere of plutonium into a beryllium-polonium core, setting off the reaction.

BY JACK McCLINTOCK PHOTOGRAPHY BY RICHARD BARNES

THIS IS YOUR ANCESTOR

When microbiologist Mitchell Sogin decided to trace human evolution to its roots, he had no idea he might find sponges

DRAW A LINE BACK THROUGH TIME from today's person, panda, porpoise, pelican, or perch and it ought to end with their earliest progenitor. In the mists of the ancient past, a single organism must have given rise to us all. But that raises an interesting question: Where did this animal come from? What did it look like? And what are its nearest living relatives?

To understand what the first animals looked like, Mitchell Sogin, an evolutionary microbiologist at the Marine Biological Laboratory in Woods Hole, Massachusetts, used advanced automated DNA technology and computing power to trace the molecular evolution of dozens of today's oldest known species—jellyfish, sea anemones, sponges, mollusks, starfish—back to their common point of origin. When he grouped the species in the precise order of their appearance on Earth, from less complex to more complex, he landed on sponges.

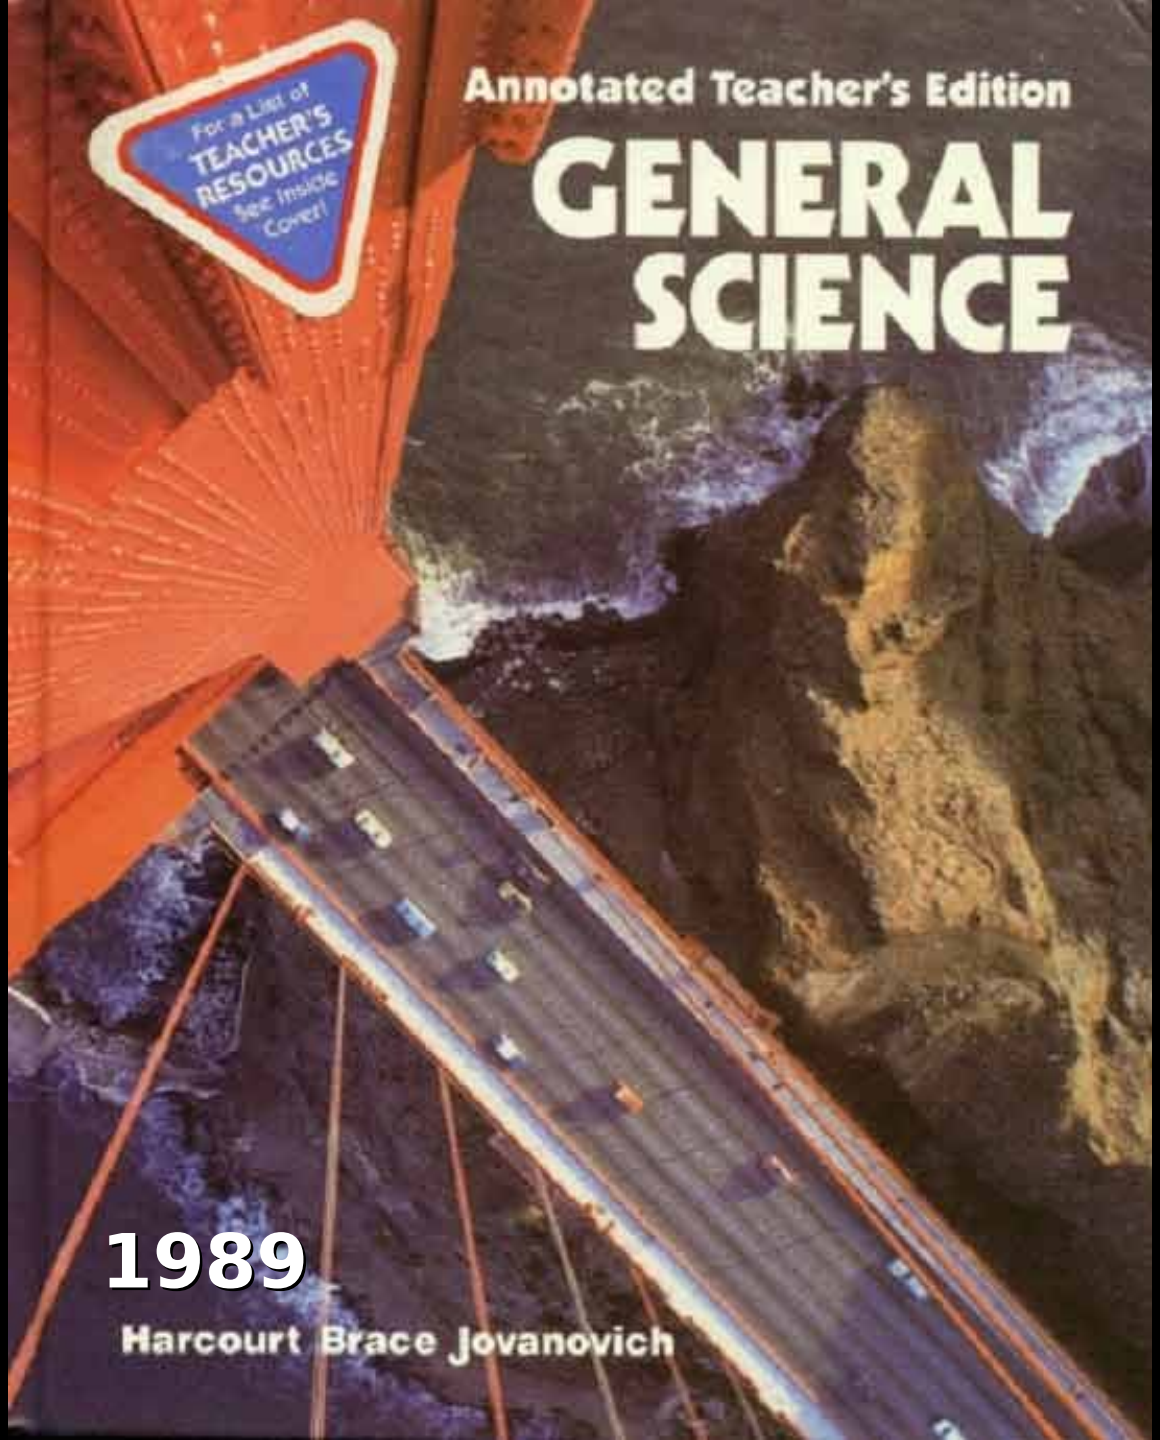

Even Sogin was taken aback. "Sponges didn't seem like animals—they didn't go seeking prey, didn't have 4 legs—or 10 legs. Show Joe Blow a sponge and it looks like cauliflower. But it's not. It's an animal."

Not bad for a Chicago kid who "never expected to become a scientist" and in fact had "no driving career ambitions" when he went to school. Now, sitting in his cluttered Woods Hole office, the soft-spoken biologist says, "It seems to be the big questions that appeal to me." He opened his lab in 1989 with 5 people (now 10) and eight years later founded the Josephine Bay Paul Center for Comparative Molecular Biology, which he directs. Both are funded by the National Institutes of Health, the National Science Foundation, and NASA. He gazes out the window at icy Eel Pond and Buzzard's Bay beyond it, then throws a wistful glance at a photo of Woods Hole in summer, when he sails his wife's 41-foot Beneteau sloop, *Origins*.

Sogin and his colleagues are examining basic questions not only in linear molecular evolution but also in molecular ecology, molecular biodiversity, the evolution of genomes, and parasitology. Questions posed decades ago by Carl Woese, his mentor at the University of Illinois, and other scientists—such as how the essential unit of life, the cell, came into being—are still unanswered. Sogin says, "I'm obsessed with finding our origins—where we come

Your kids go ape in school? Here's why

Don't be surprised if our little d... lings go ape or get up to mor... shines when they return to c...

Misbehavior tops the list of w... parents and teachers worry about... d that's exactly where such concerns ...long, considering what kids are not ...g taught in school.

In most schools, Johnetta and Johnny are being taught evolution, that humankind evolved from apes.

The issue came to the forefront recently because a school district near San Diego had the good sense to adopt a policy of teaching creationism — much to the dismay of critics, including USA Today's editorial page.

It is amazing that media institutions that virtually worship the First Amendment are the first to toss it when it comes to religious free speech. When both creationism and evolution are taught side by side, you don't have the establishment of a religion, which the Constitution prohibits, but an opportunity to be protected from one-sided, narrow thinking, which the Constitution encourages.

Prohibiting the teaching of creationism in favor of evolution creates an atheistic, belligerent tone that might explain why our kids sometimes perform like Godzilla instead of children made in the image of God.

BARBARA REYNOLDS

While evolution teaches that we are accidents or freaks of nature, creationism shows humankind as the offspring of a divine creator. There are rules to follow which govern not only our time on earth, but also our afterlife.

One philosophy preaches happenstance with mayhem as a conclusion; the other, divine order. One suggests the survival of the fittest; the other, a commitment to serve the weakest and sickest among us.

To me, there is no contest. Teaching evolution makes about as much sense as teaching our kids that humankind was grown in a cabbage patch or raised by wolves.

Even in the dullest mind, a light bulb should go off: Who created the cabbage, and who made the wolves?

Under the rules of evolution, teachers are forced to answer to King Kong rather than to the King of Kings.

We are not human animals. We have written speech and higher intellect, but more important, we have souls fueled by a spirit of right or wrong.

Human action is determined by core beliefs. Creationism teaches that humans are wonderfully made with the promise of high expectations.

If evolution is forced on our kids, we shouldn't be perplexed when they beat on their chests or, worse yet, beat on each other and their teachers.

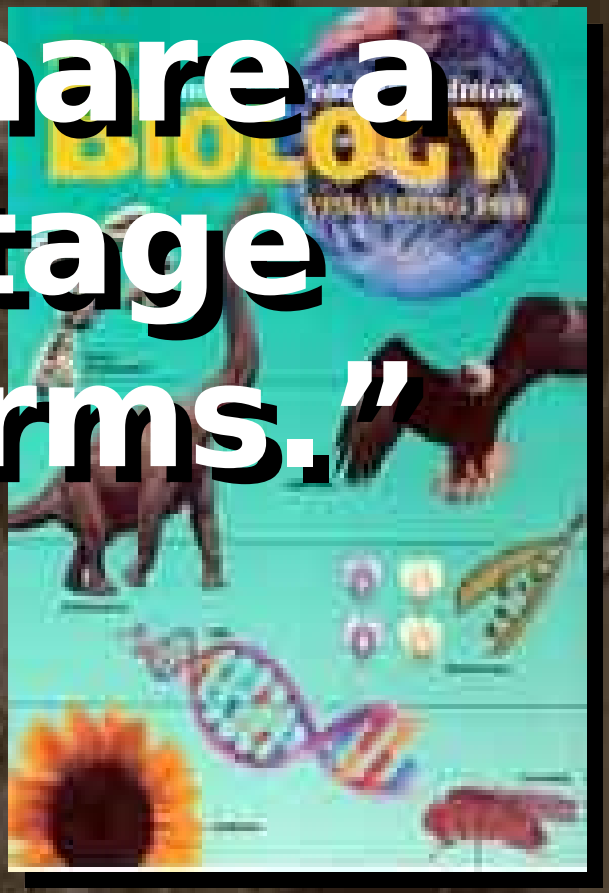

Barbara Reynolds is a columnist for Gannett News Service.

Misbehavior tops the list of what parents and teachers worry about. And that's exactly where such concerns belong, considering what kids are not being taught in school.

In most schools, Johnetta and Johnny are **being taught evolution,** that humankind evolved from apes.

The issue came to the forefront recently because a school district near San Diego had the good sense to adopt a policy of **teaching creationism** — much to the dismay of critics, including USA Today's editorial page.

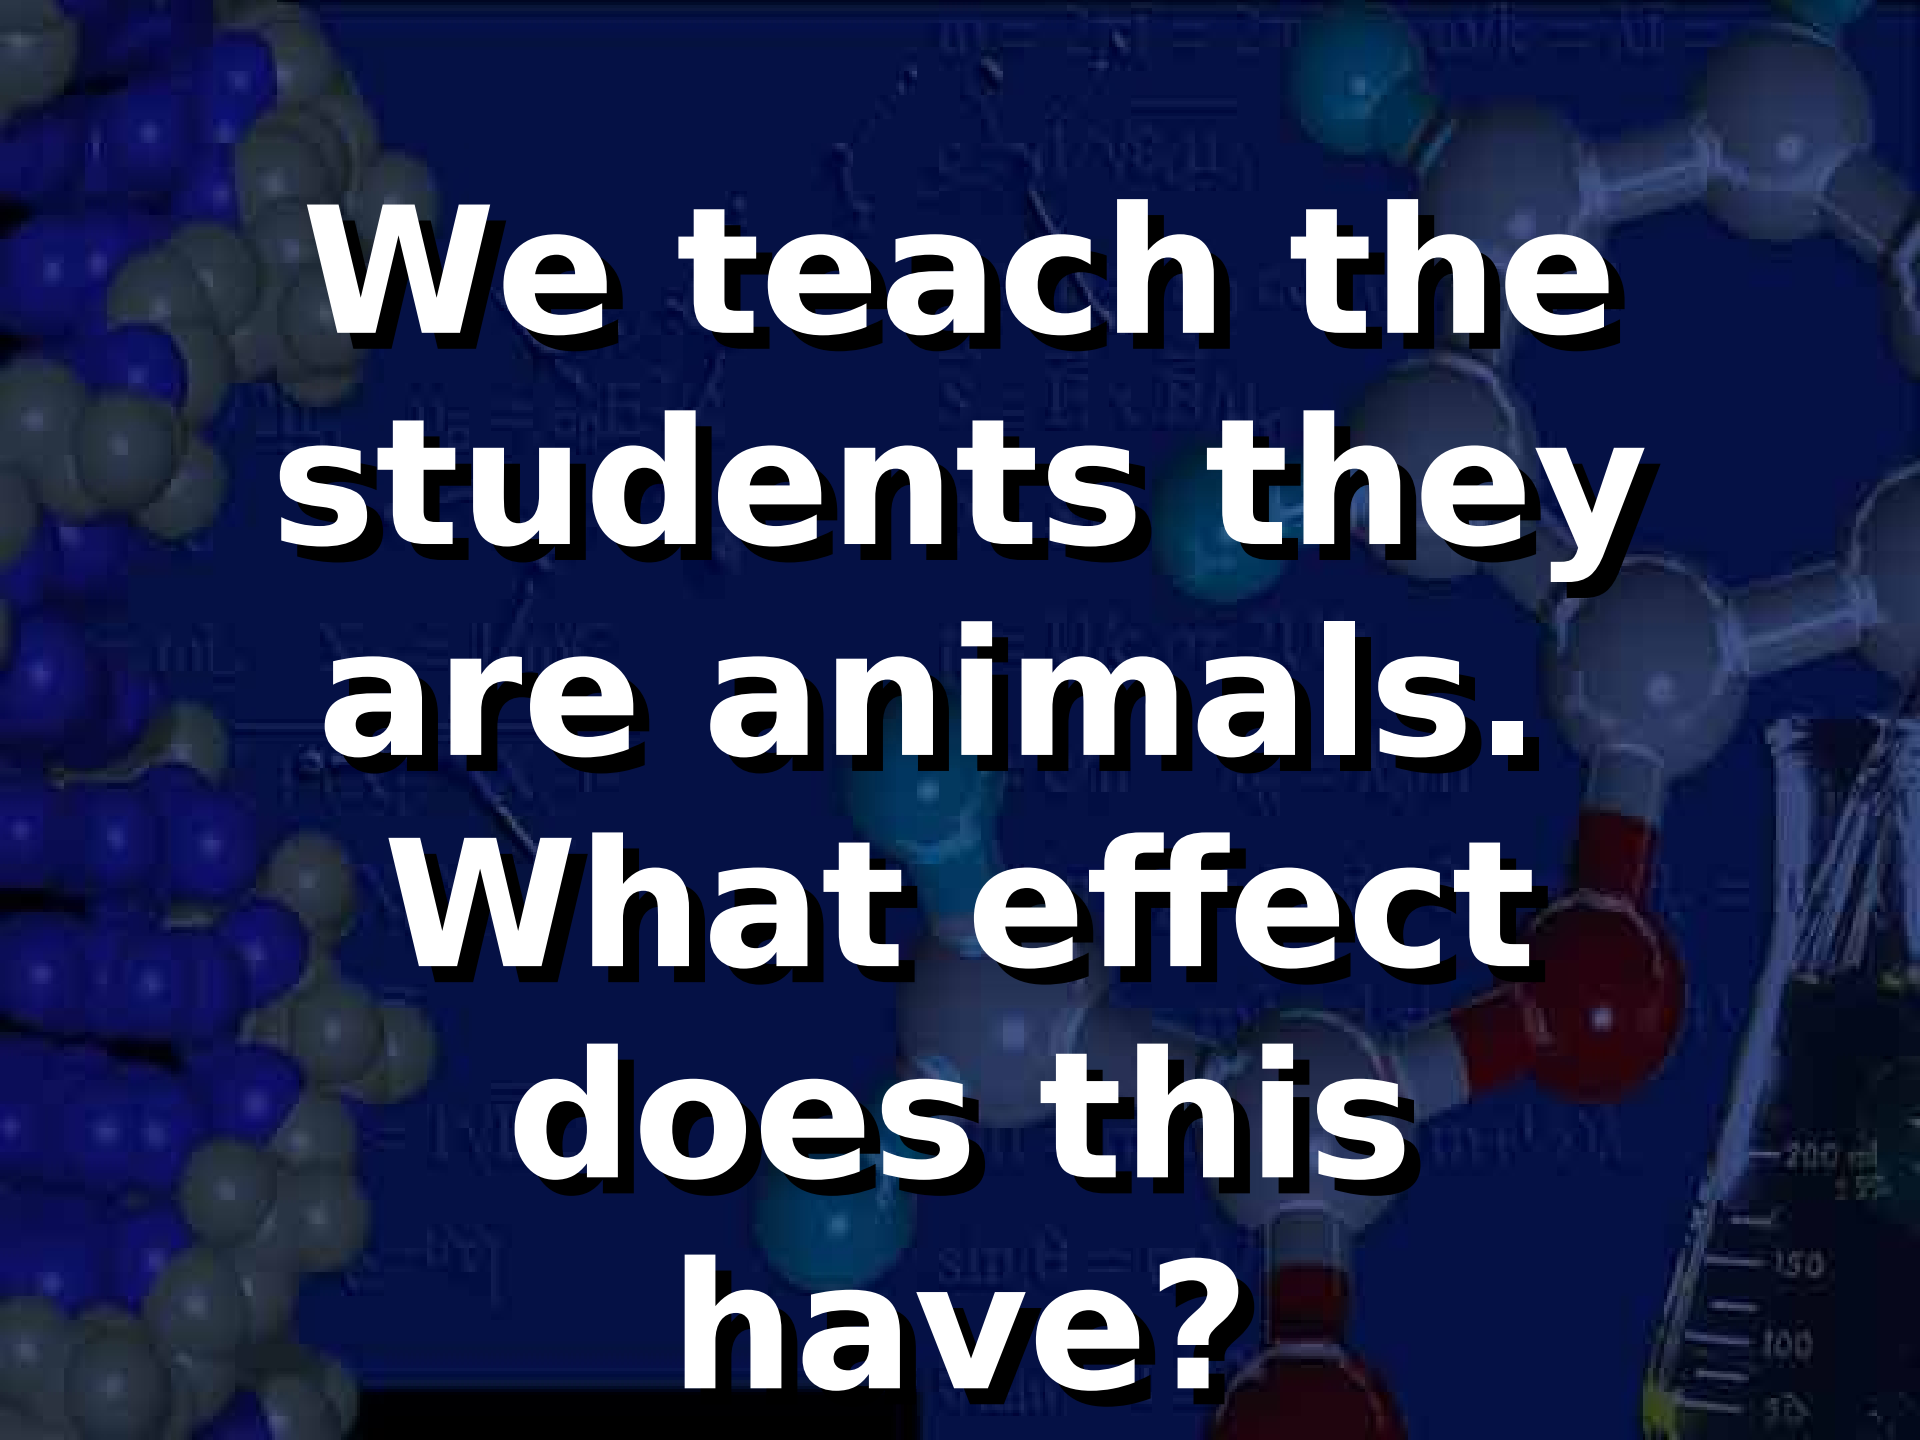

“You are an animal and share a common heritage with earthworms.”

Biology: Visualizing Life, Holt, 1994

But he that sinneth against me wrongeth his own soul; all they that hate me love death.

- Proverbs 8:36

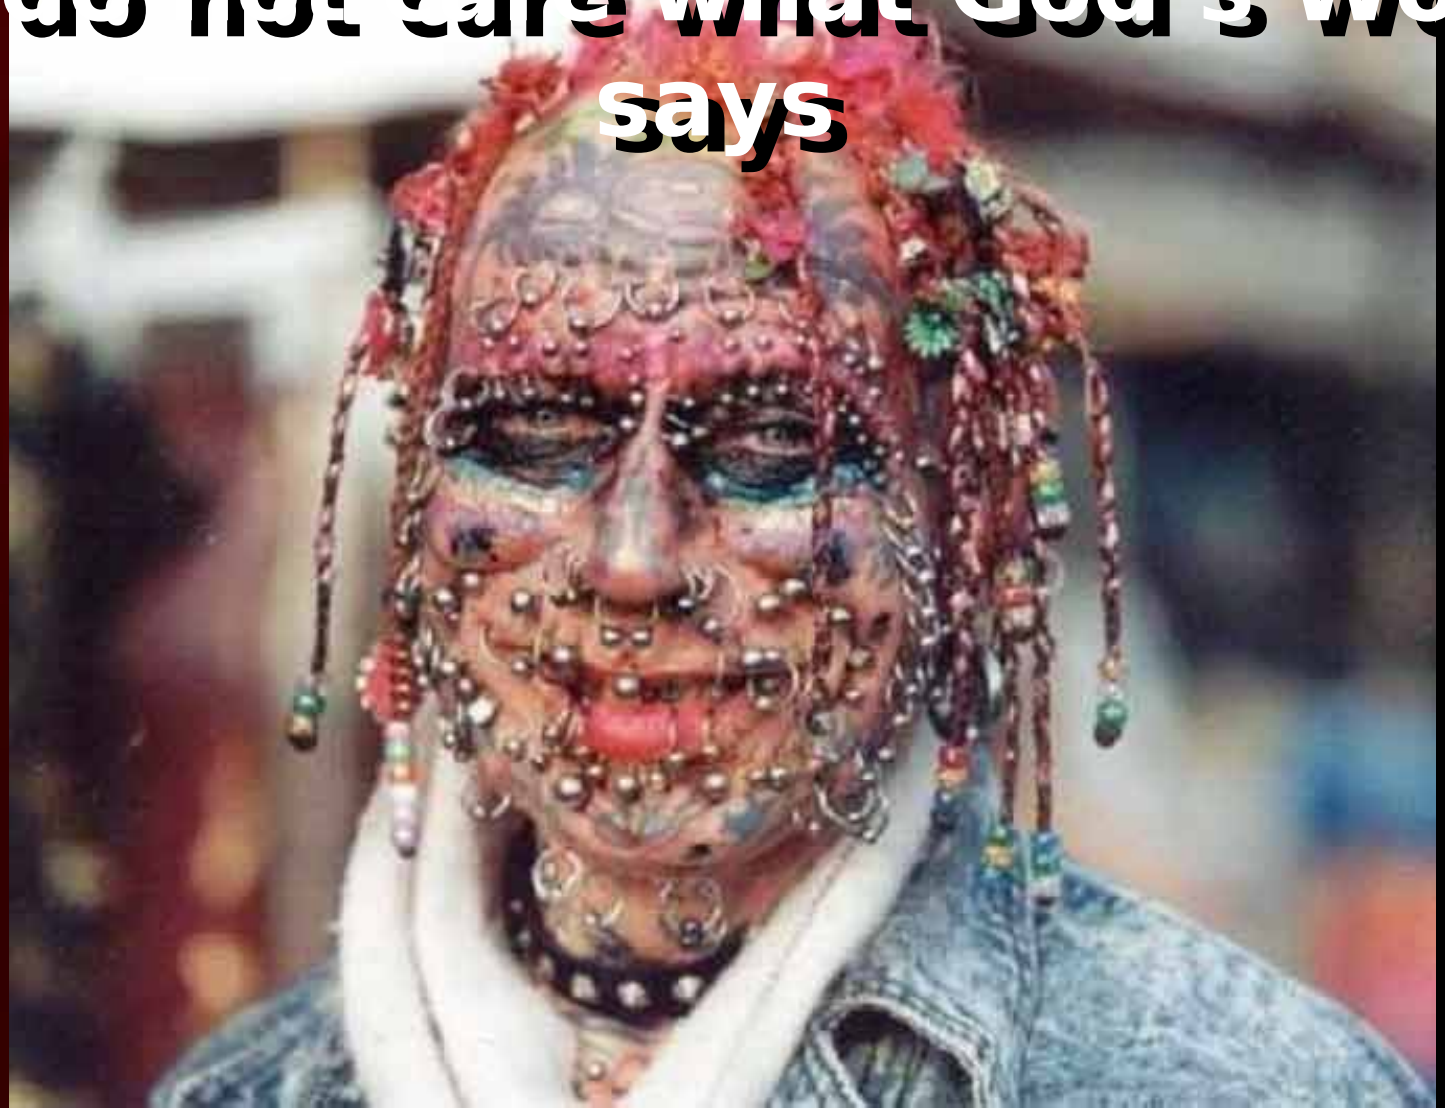

Kids are being taught that there are no absolutes

Thus saith the Lord...
That is absolute!
413 times in Bible

Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you:
Leviticus 19:28
I am the LORD.

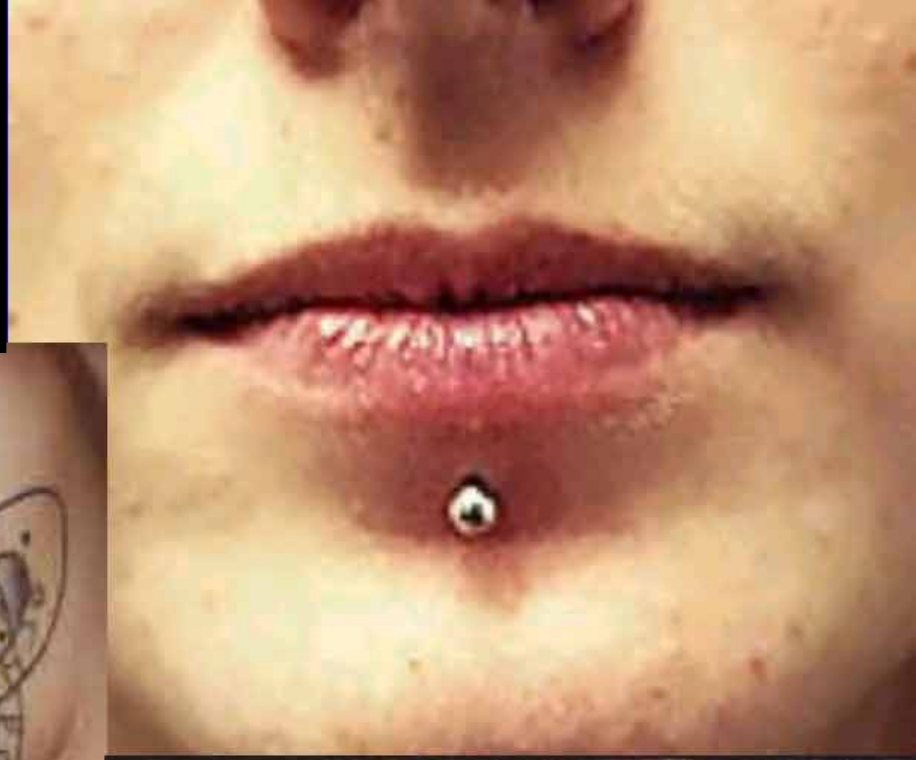

Many people do not seem to know,
or do not care what God's Word says

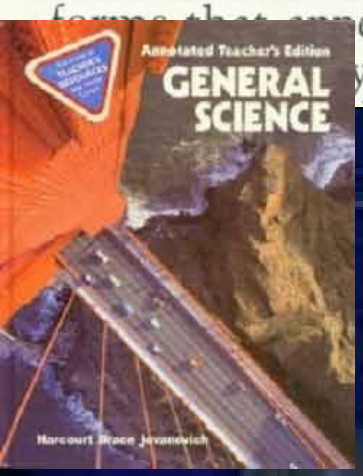

metric dating was able to add absolute dates to the time chart.

- Introduce the concept of one million of something, and then expand to one billion. (See "Motivating Your Students") Stress that the earth is thought to be at least 4.5 billion years old; thus it is necessary to divide up time into manageable units called eras.
- As the geologic eras represented in the chart on page 382 are discussed, have students locate them and identify the subdivisions and life-forms that appear. Stress that the organisms y representative of the groups.

Holt *General Science* Teacher's Edition, 1988, p. 381

Many teachers blindly follow the textbook never realizing they can teach creation if they wish.

"VITAL ARTICLES ON SCIENCE/CREATION"

impact

October 1989

No. 196—TEACHERS *CAN* TEACH CREATION SCIENCE IN THE CLASSROOM

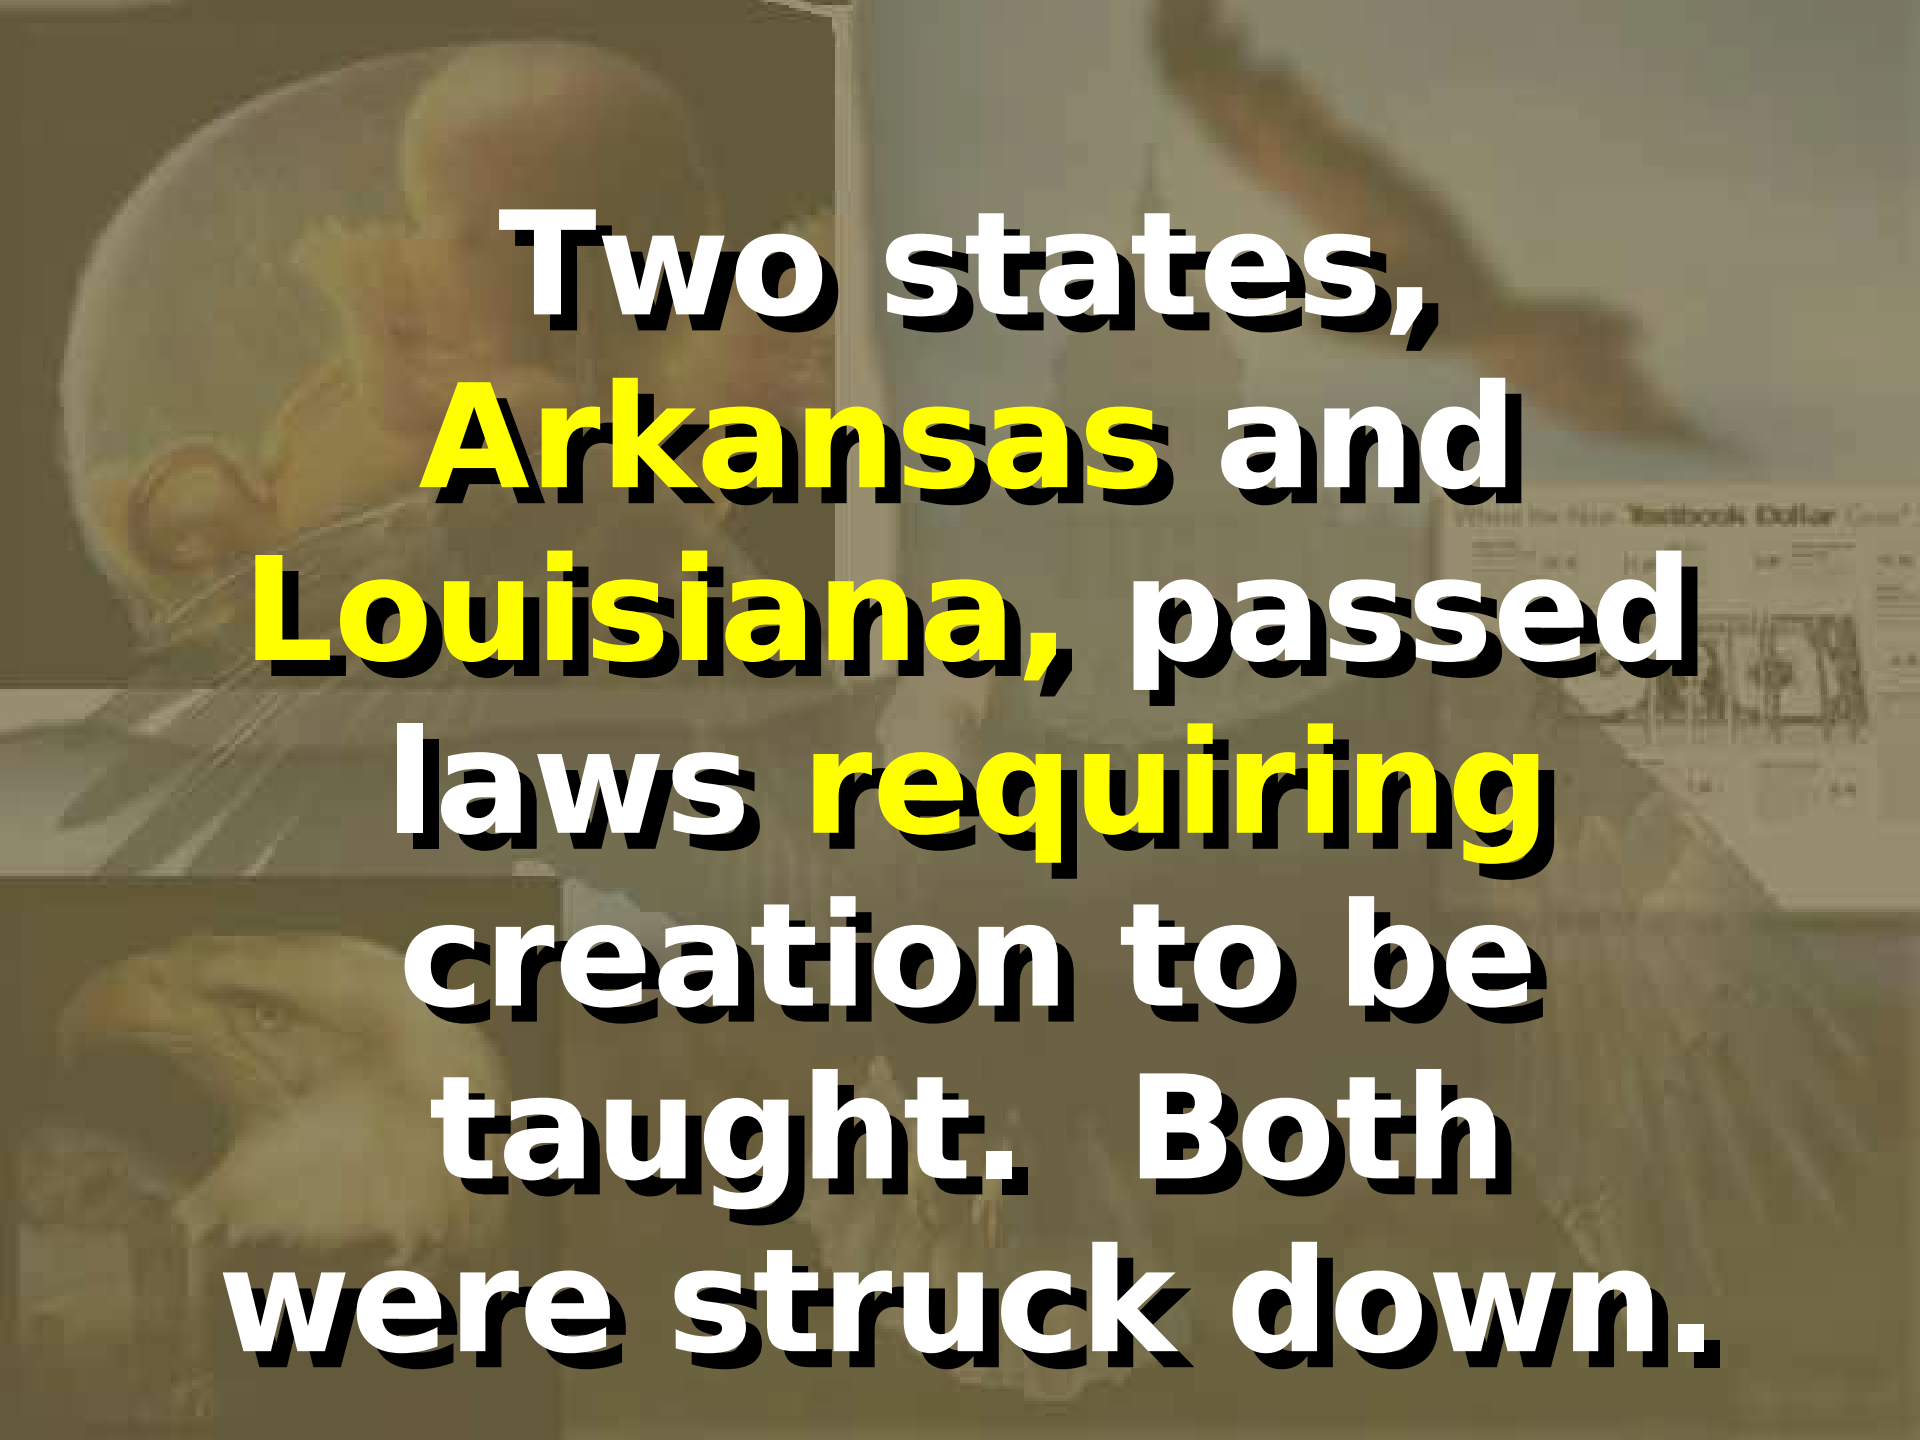

by Robert L. Simonds, Th.D.*

Today, many in public education are attempting to use the government to censor scientific evidence that refutes evolution and advances the concept of special creation. It is widely believed that scientific creation-ism

- **1957**
  The Soviet Union launches Sputnik, the first satellite into space.

Americans were taught that the Soviets were ahead of us in science because they taught evolution. Americans panicked and built bomb shelters.

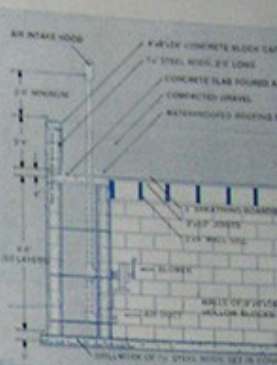

A Double—walled Bunker for Safety above Ground

In rocky or watery areas where you cannot dig down far enough to sink a metal shelter, the shelter shown here provides a good solution. It is put together from double walls of concrete blocks built on a footing of reinforced concrete. The gap between the walls is filled with well-tamped earth or gravel. The roof supports a 28-inch pile of bank-run gravel which should be packed down tight and can be topped off with a layer of grass. Sheets of roofing felt, set in tar, line the top and walls of the roof, turning it into a pan which will catch water and drain it off at the corners through small pipes.

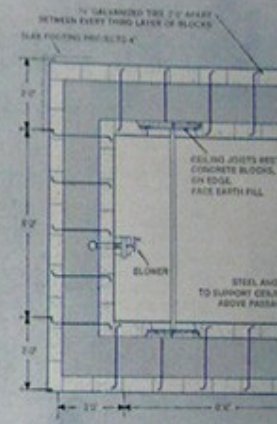

Here again a baffle wall forms a corridor between the outer entrance of the shelter and the safe inner sanctum. The outside corridor is stocked with some of the family's needs—closed cans of drinking water, emergency tools and tightly sealed pails for garbage and human waste. Extra concrete blocks should be stacked up in the corridor to help block the outside door against radiation. A blower mounted near the commissary shelves sucks in fresh air, and a pipe jutting up at the far right serves as an outlet.

Except for the concrete floor, the shelter could be built by any enterprising do-it-yourself family. The blocks can be hollow to save effort in laying them. But the cores should be filled with mortar, sand or plain dirt to add to the shielding. There are a few other tricks to know. The blocks should be laid two or three layers at a time to make it easier for you to tamp down the earth which fills them. Steel ties should be placed between the two walls at regular intervals while the mortar is still soft to hold them together. Take care when tamping the earth or gravel that you do not crack the mortar. You should tamp the fill down about four inches at a time. If you use gravel fill, tamp it down in 8-inch layers. In cold climates, where fill might freeze and crack walls, make entire wall from blocks.

The materials needed for this shelter, which provides almost complete protection against fallout, run to about $700. Contractor's fees would run the cost higher if you decide not to build it yourself. One contractor in Florida, for example, is building a similar model, complete with bunks, shelves, a blower and a chemical toilet for a total of $2,195.

SATs get dumber

CHICAGO TRIBUNE 4-9-95

New scores will be higher, but standards lower

By Ron Grossman

High school students who took their SAT tests April 1 received an unprecedented bonus, which may be nice for them but also pounds another nail in the coffin of American education.

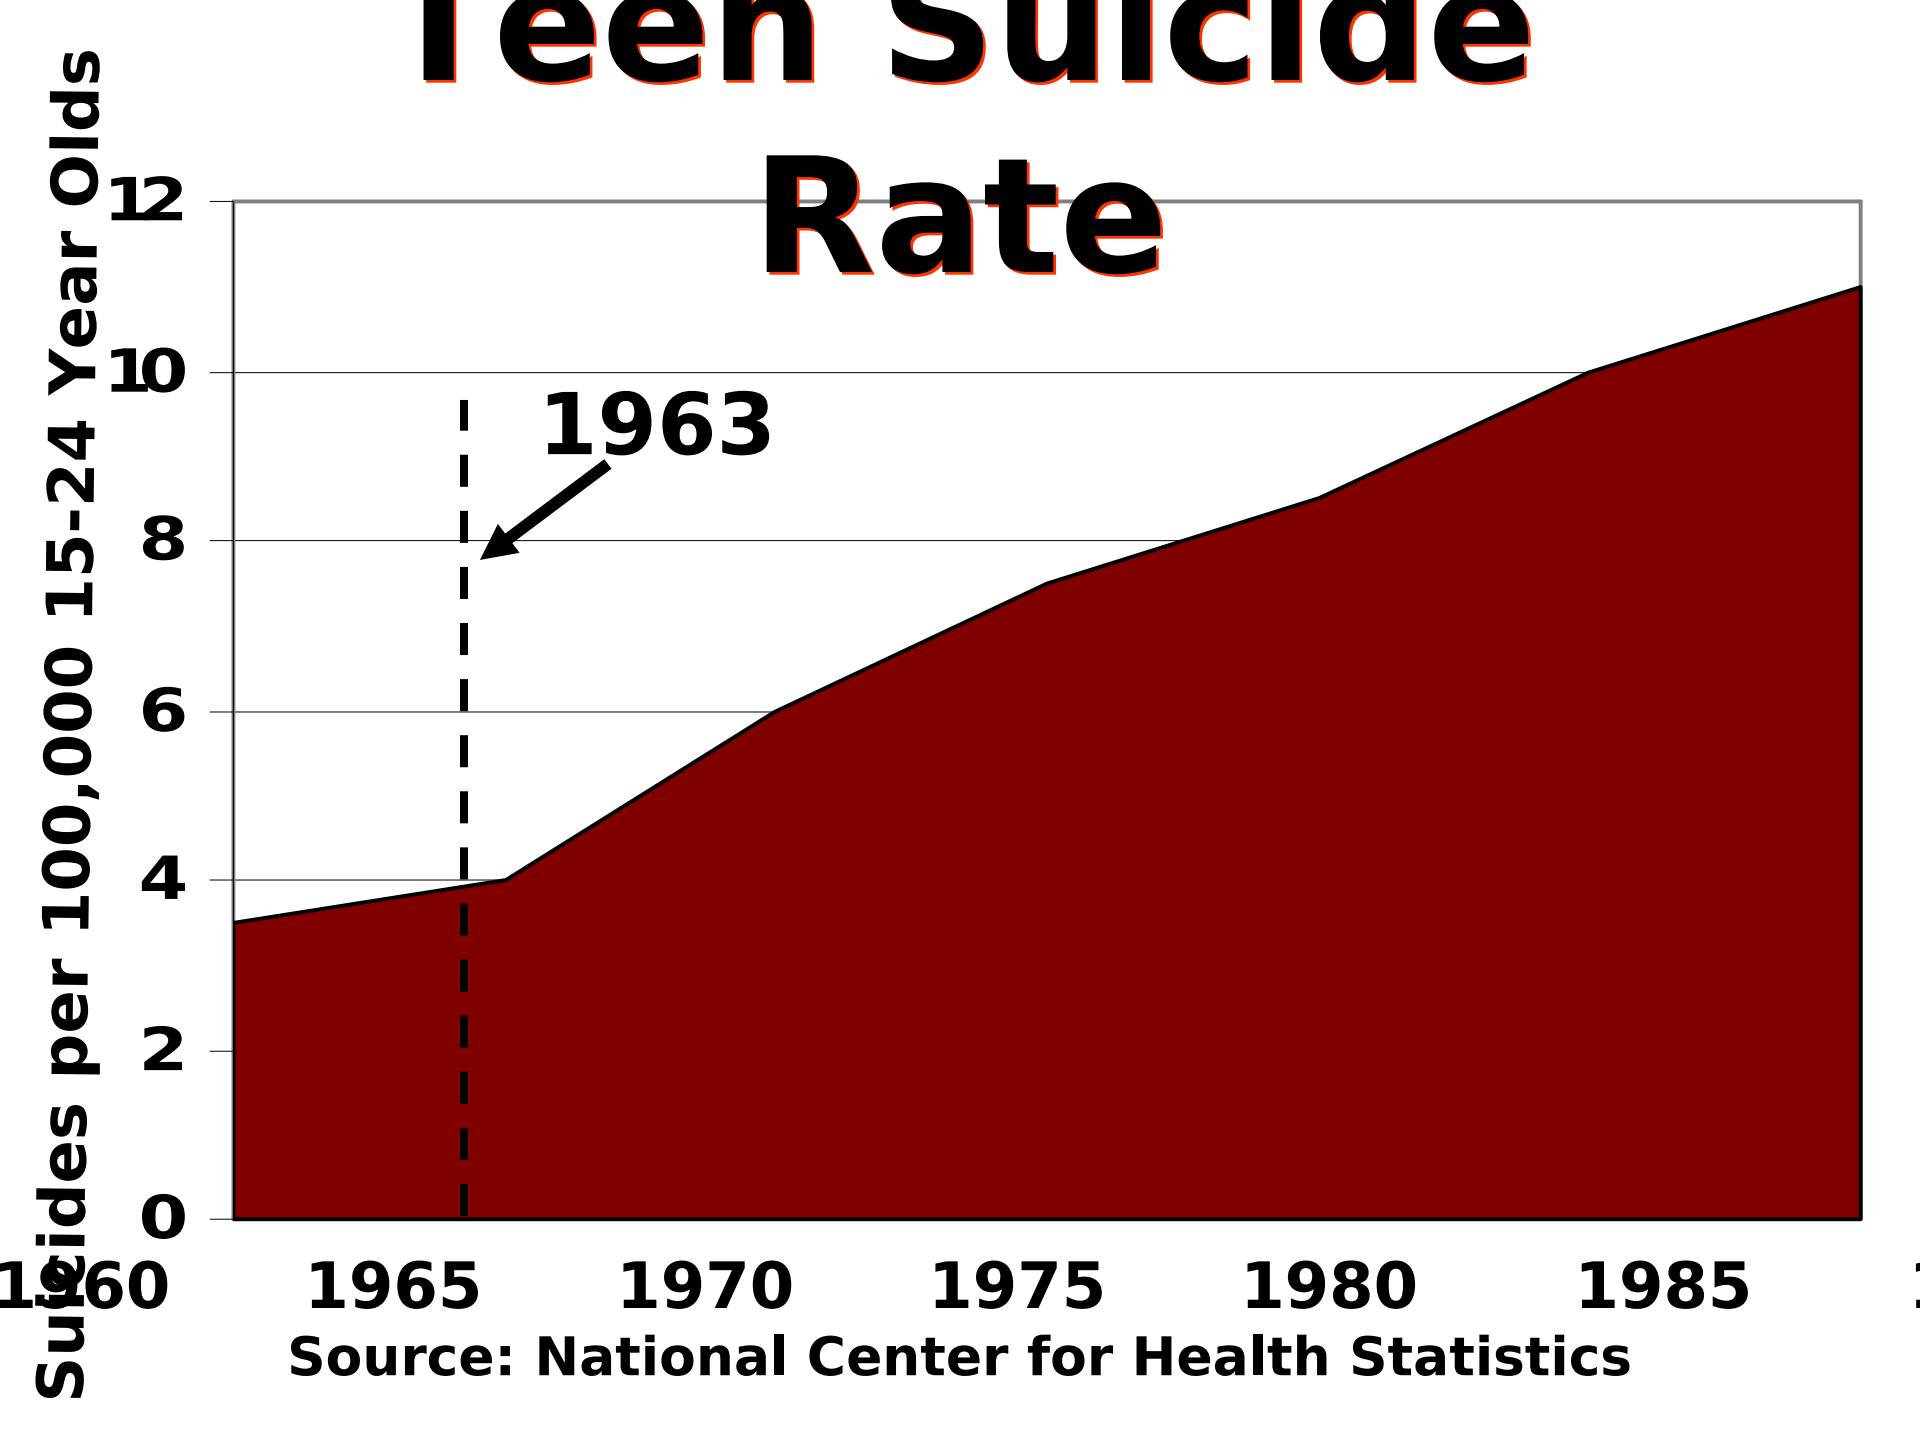

For no additional cost or effort, this spring's crop of college hopefuls were awarded 75 more points, on average, for their performance on the verbal section of the exam, 30 more points for the math portion, than they would have received had they taken the test earlier. The gift is permanent, to be enjoyed by all students who subsequently choose to take the Scholastic Assessment Test, the most widely used college-entrance examination.

With a flip of the graph paper, decades of declining SAT scores are now to be reversed: [illegible] will again be ranked at the

The Birth and Death of the Universe

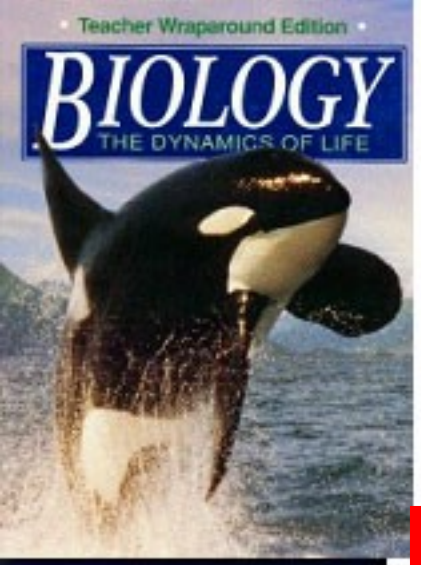

Prentice Hall "18 to 20 billion"

How was the universe born and how will it end? Most astronomers believe that about 18 to 20 billion years ago all the matter in the universe was concentrated into one very dense, very hot region that may have been much smaller than a period on this page. For some unknown reason, this region exploded. This explosion is called the **big bang.** O... the big bang was the formation of galax... away from one another. This explains w... verse is still expanding.

Will the universe keep expanding fo...

Early History of Earth

Step into your imaginary time machine, punch a few buttons, and get ready to explore a place to which you'll probably never want to return—primitive Earth.

Early Earth was an inhospitable place

Earth is thought to have formed about 4.6 billion years ago. It was very different from today's Earth. *Figure 17.1* illustrates what it may have looked like. Scientists theorize that Earth began as a hot ball of rock. Meteorites bombarded its surface, and volcanoes formed by the high temperatures inside Earth constantly shook the planet, shooting out gases that formed an atmosphere. Earth was much too hot for life to exist.

About 3.9 billion years ago, Earth had cooled enough for water vapor to condense, and Earth was, for the first time, experiencing violent rainstorms. Eventually, the accumulated rainfall formed Earth's oceans. It is in these oceans, about 3.5 billion years ago, that scientists believe the first living organisms appeared.

7.1

tions on early Earth were not suitable owever, geological events, such as ctivity, set up conditions that would jor role in the evolution of life.

Glenco *Biology* 1995 p. 398

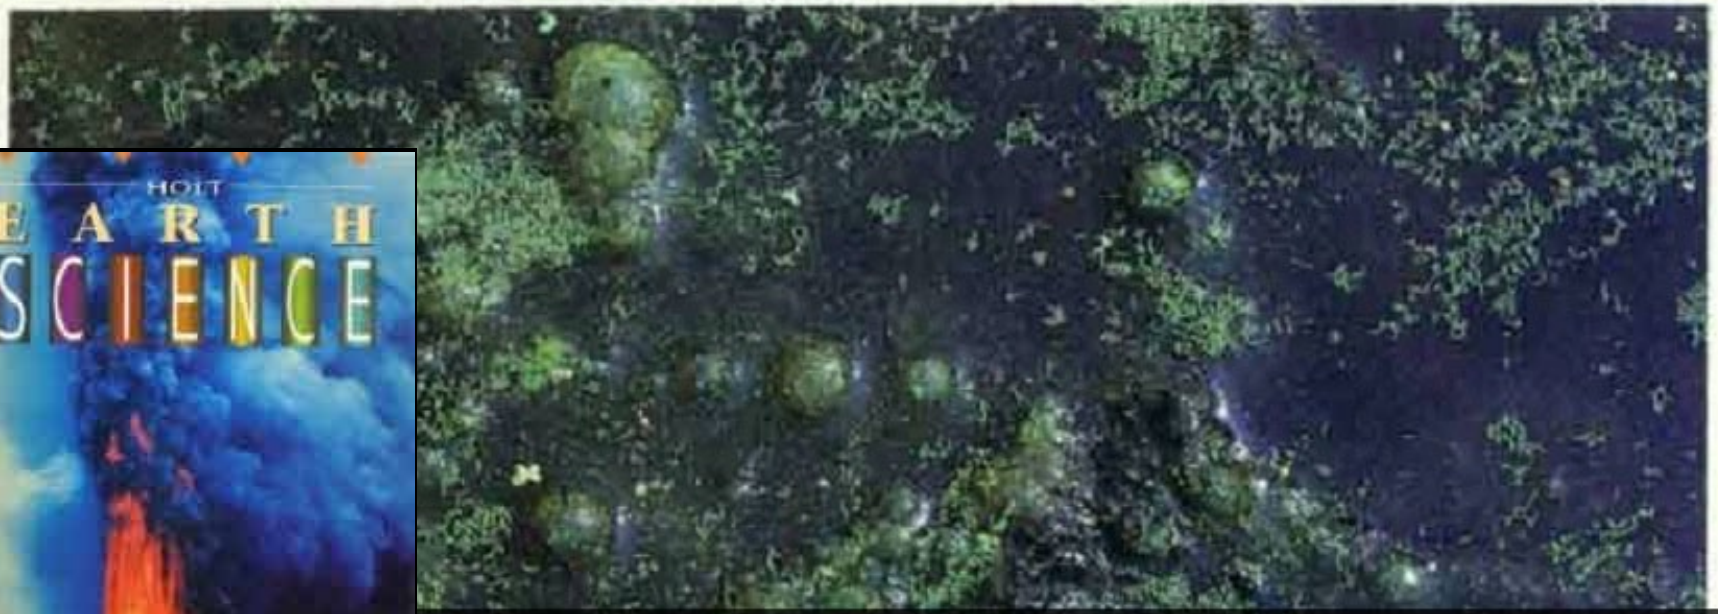

Millions of years of torrential rains created great oceans.

Holt *Earth Science* 1994 p. 281

Origin of Life

On an earth-history calendar, it is now sometime in April. There is still no life, but swirling in the waters of the oceans is a bubbling broth of complex chemicals. Some of them are carbohydrates, proteins, and nucleic acids—the chemicals of life. However, the progress from a complex chemical soup to a living organism is very slow.

Volcanic activity is one proof that
Earth is constantly changing. 1989

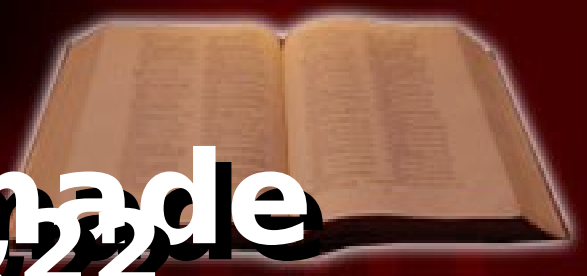

This teaching clearly puts death before sin. The question is simple: did man bring death into the world or did death bring man into the world? Much more on that heresy on

Nevertheless death reigned from Adam to Moses,

Romans 5:14

For since by man came death, by man came also the resurrection of the dead. For as in Adam all die, even so in Christ shall all be made alive

1 Corinthians 15:21 &22

Who cares about the age of the earth

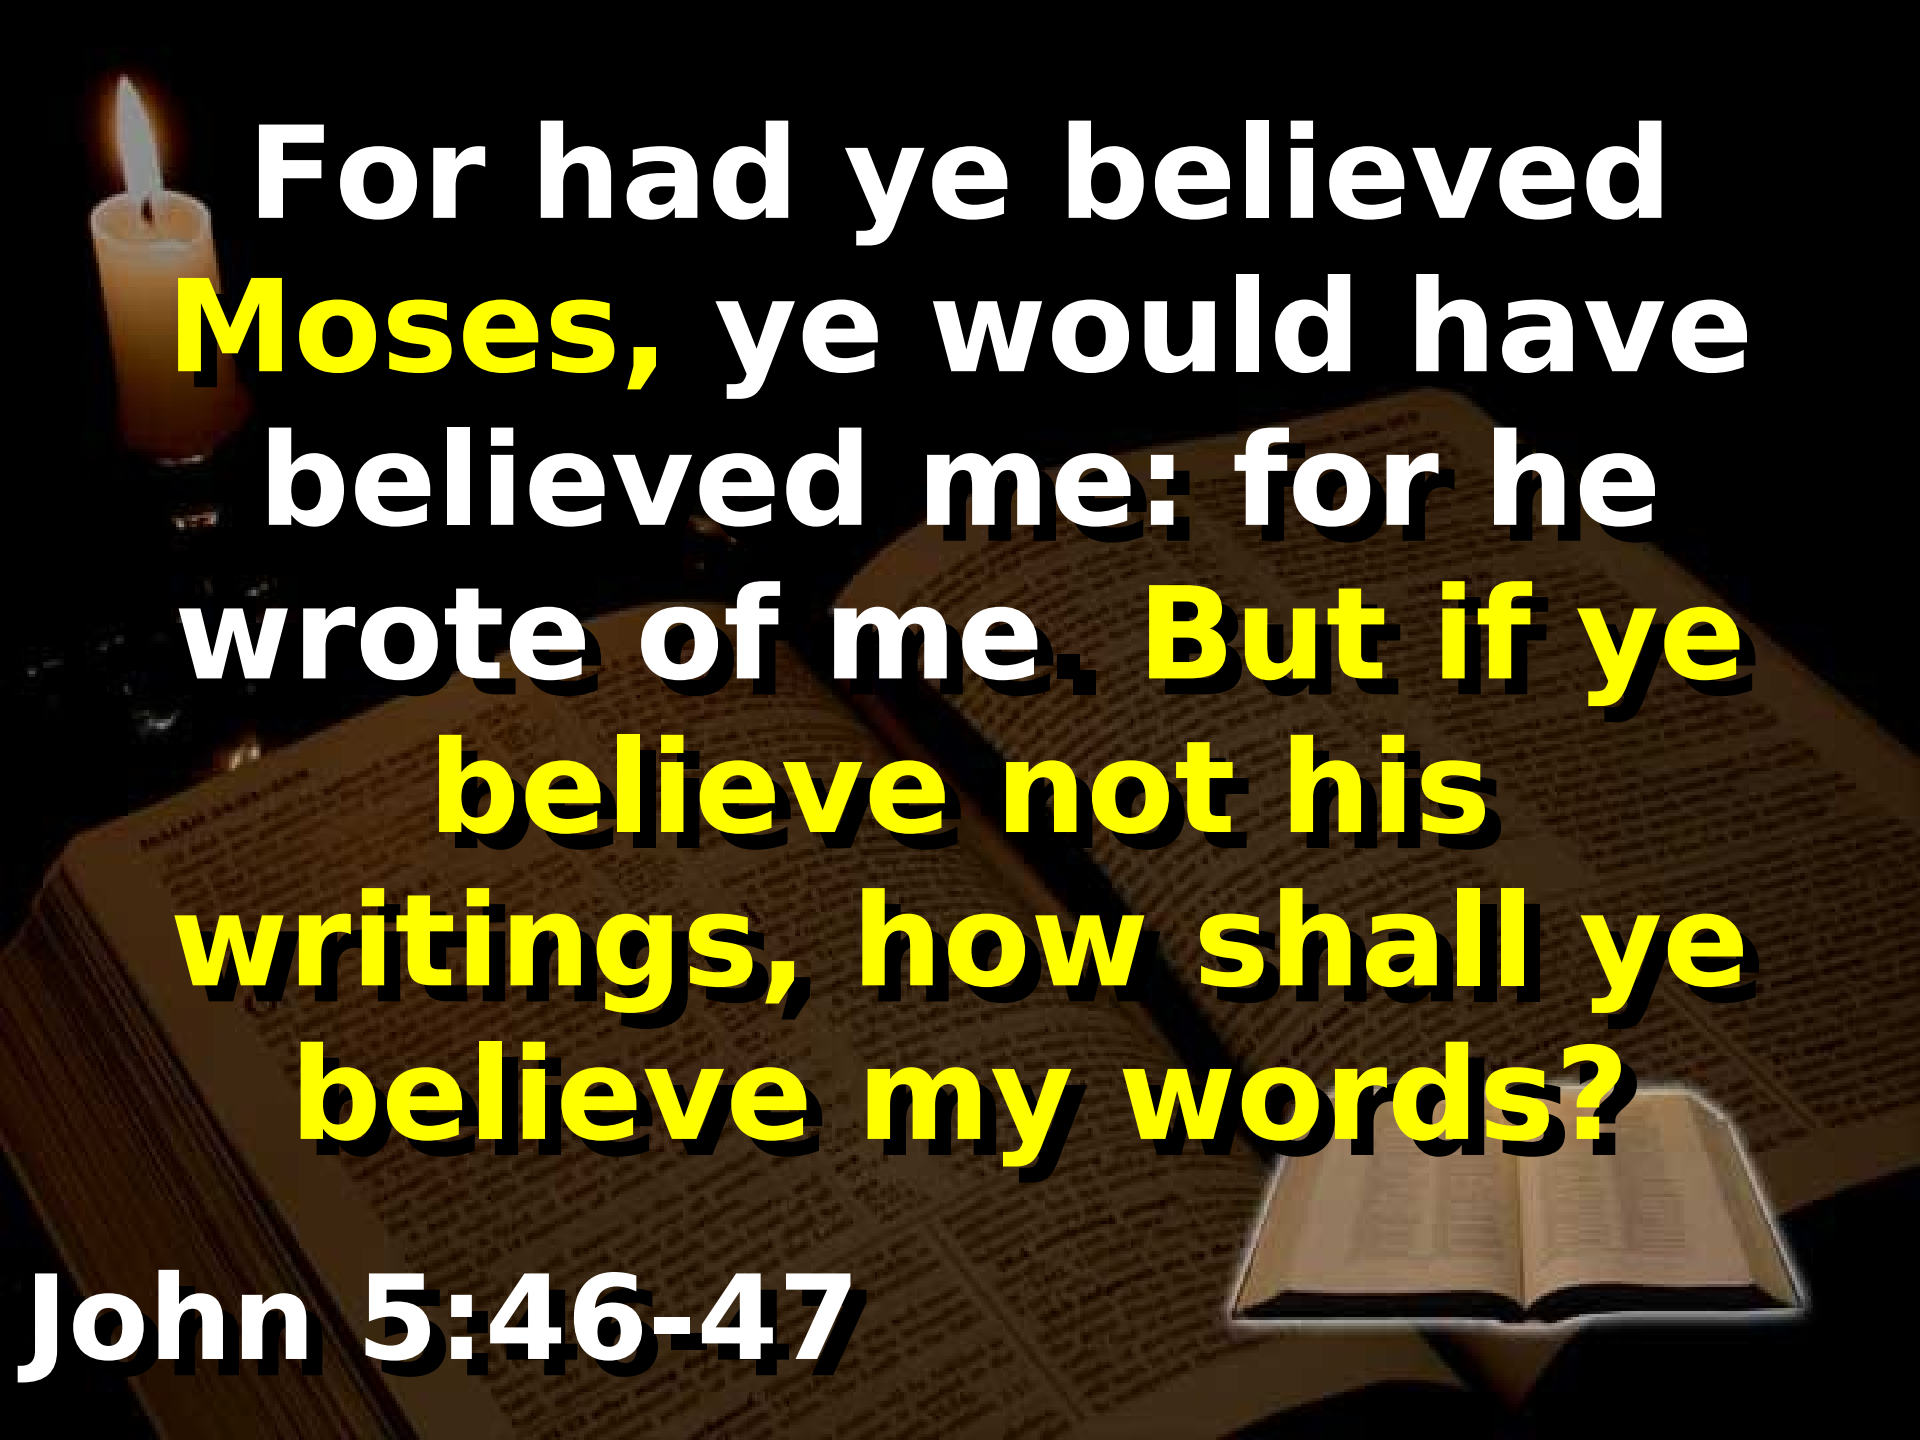

1. The credibility of the book of Genesis is at stake.

Can the average person read it and understand or do we need a Guru to lead us?

2. The credibility of Jesus is at stake. (Jesus cited Genesis 25 times –see Defender's Bible p. 1556)

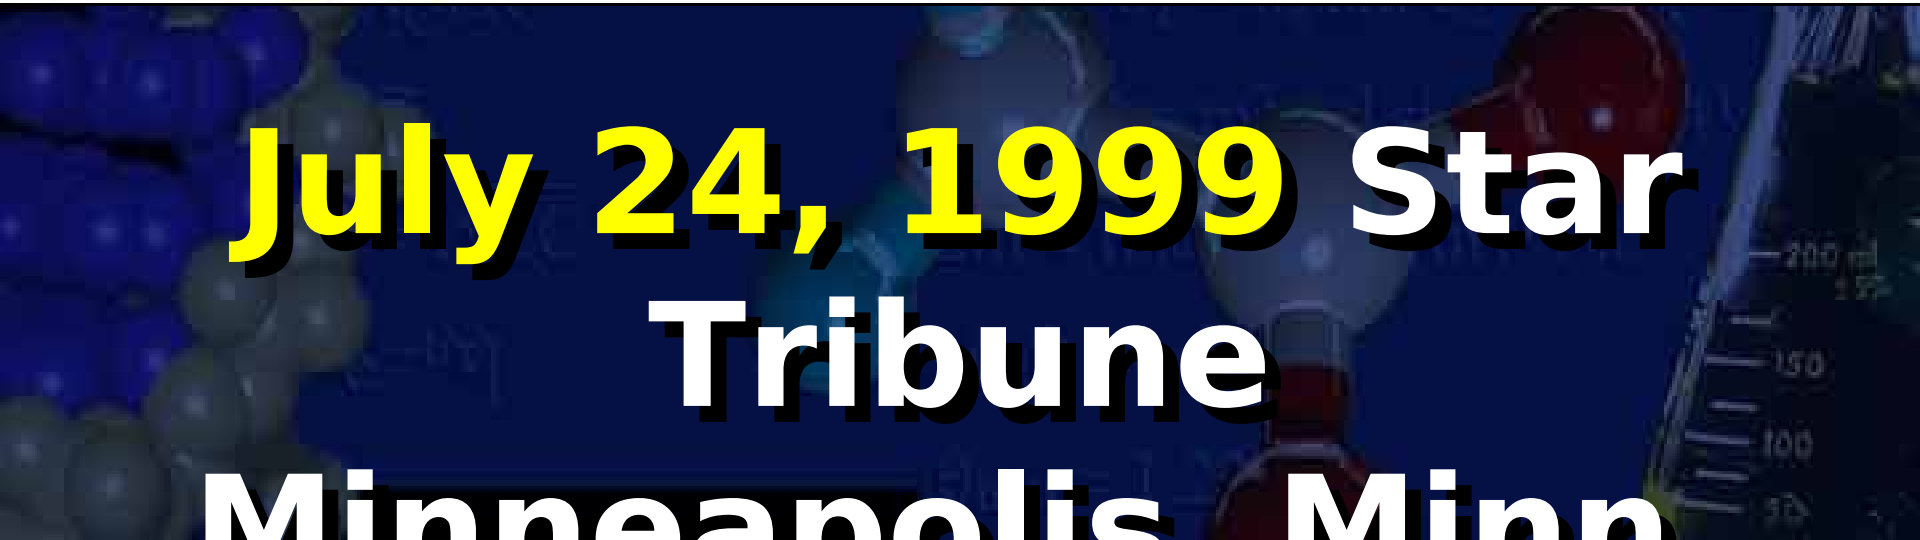

3. Nearly every other book in the Bible refers to Genesis. 200x in New Testament alone –see Defender's Bible p. 1545-1556.

4. The evolutionists care. Their entire theory looks silly without

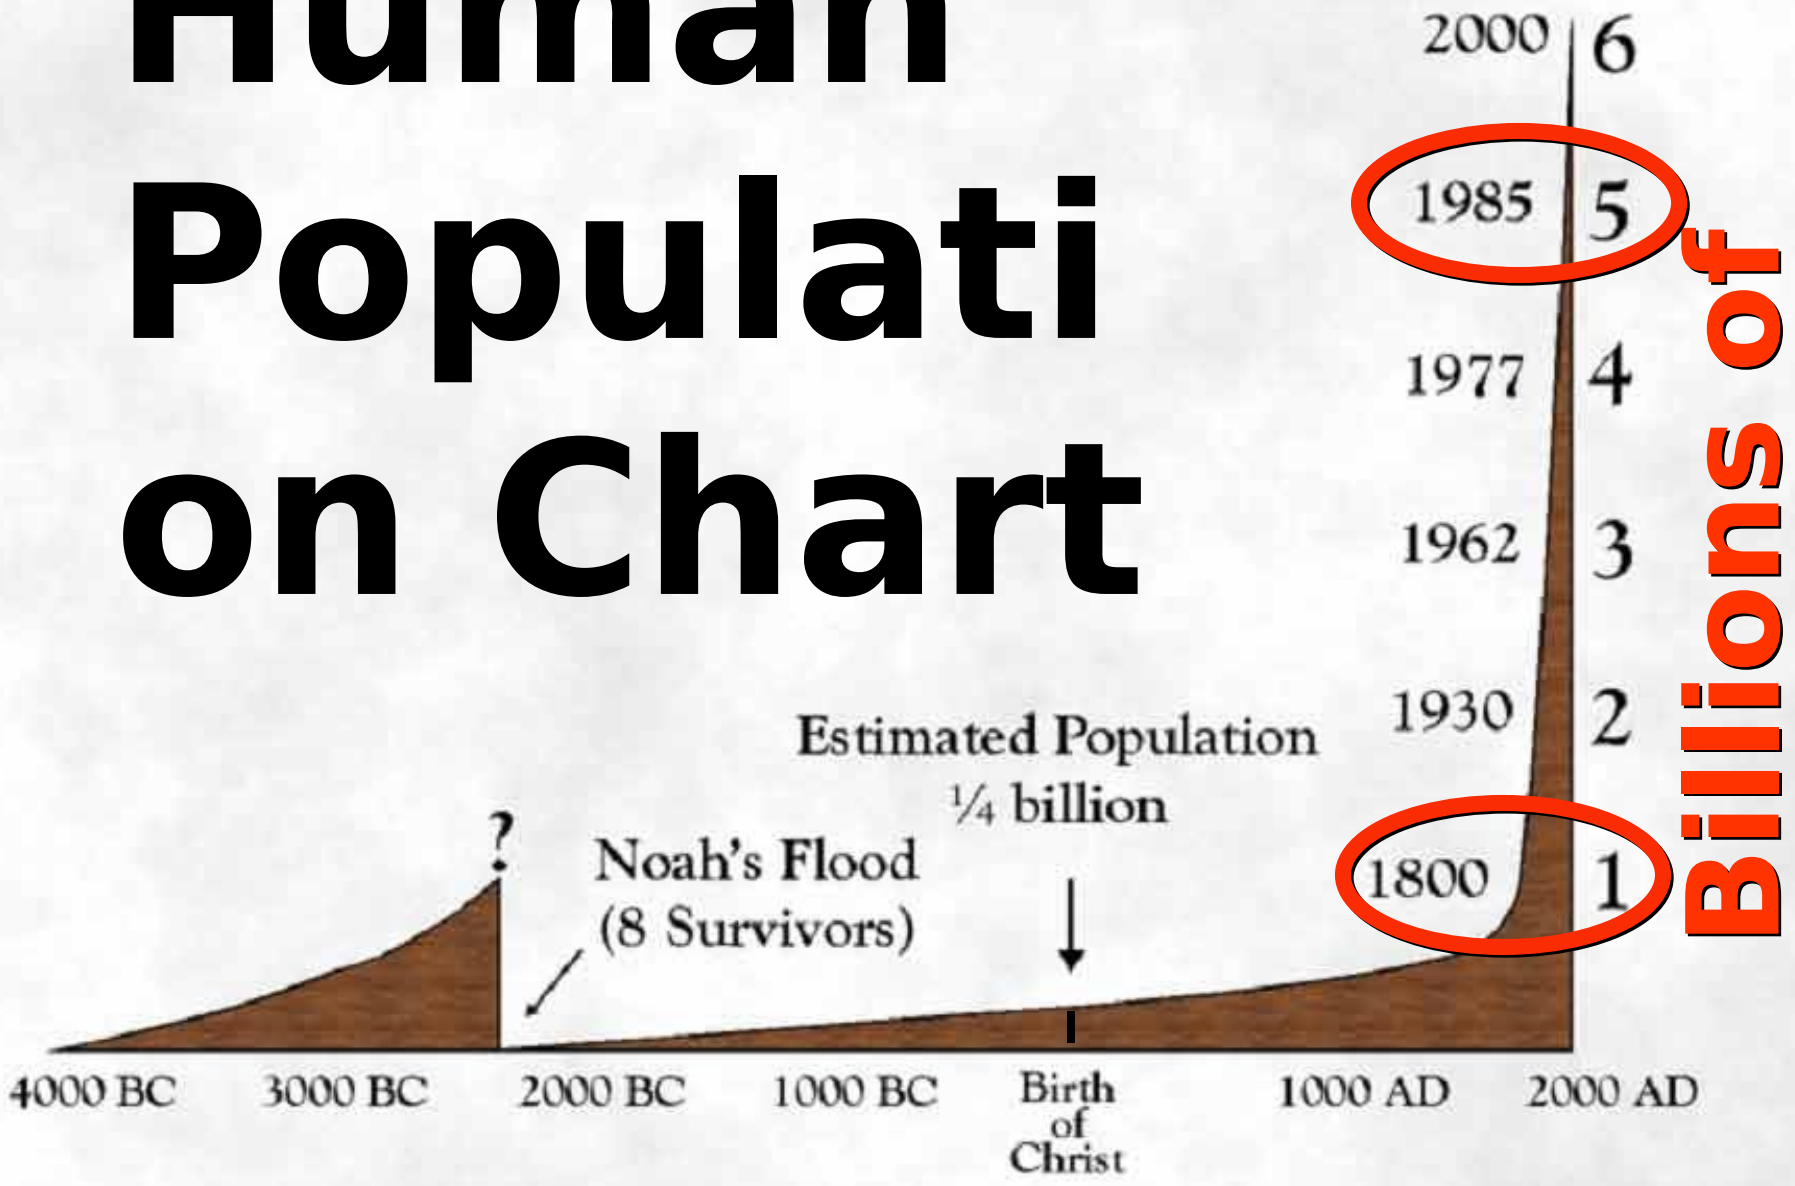

For had ye believed Moses, ye would have believed me: for he wrote of me. But if ye believe not his writings, how shall ye believe my words?
John 5:46-47

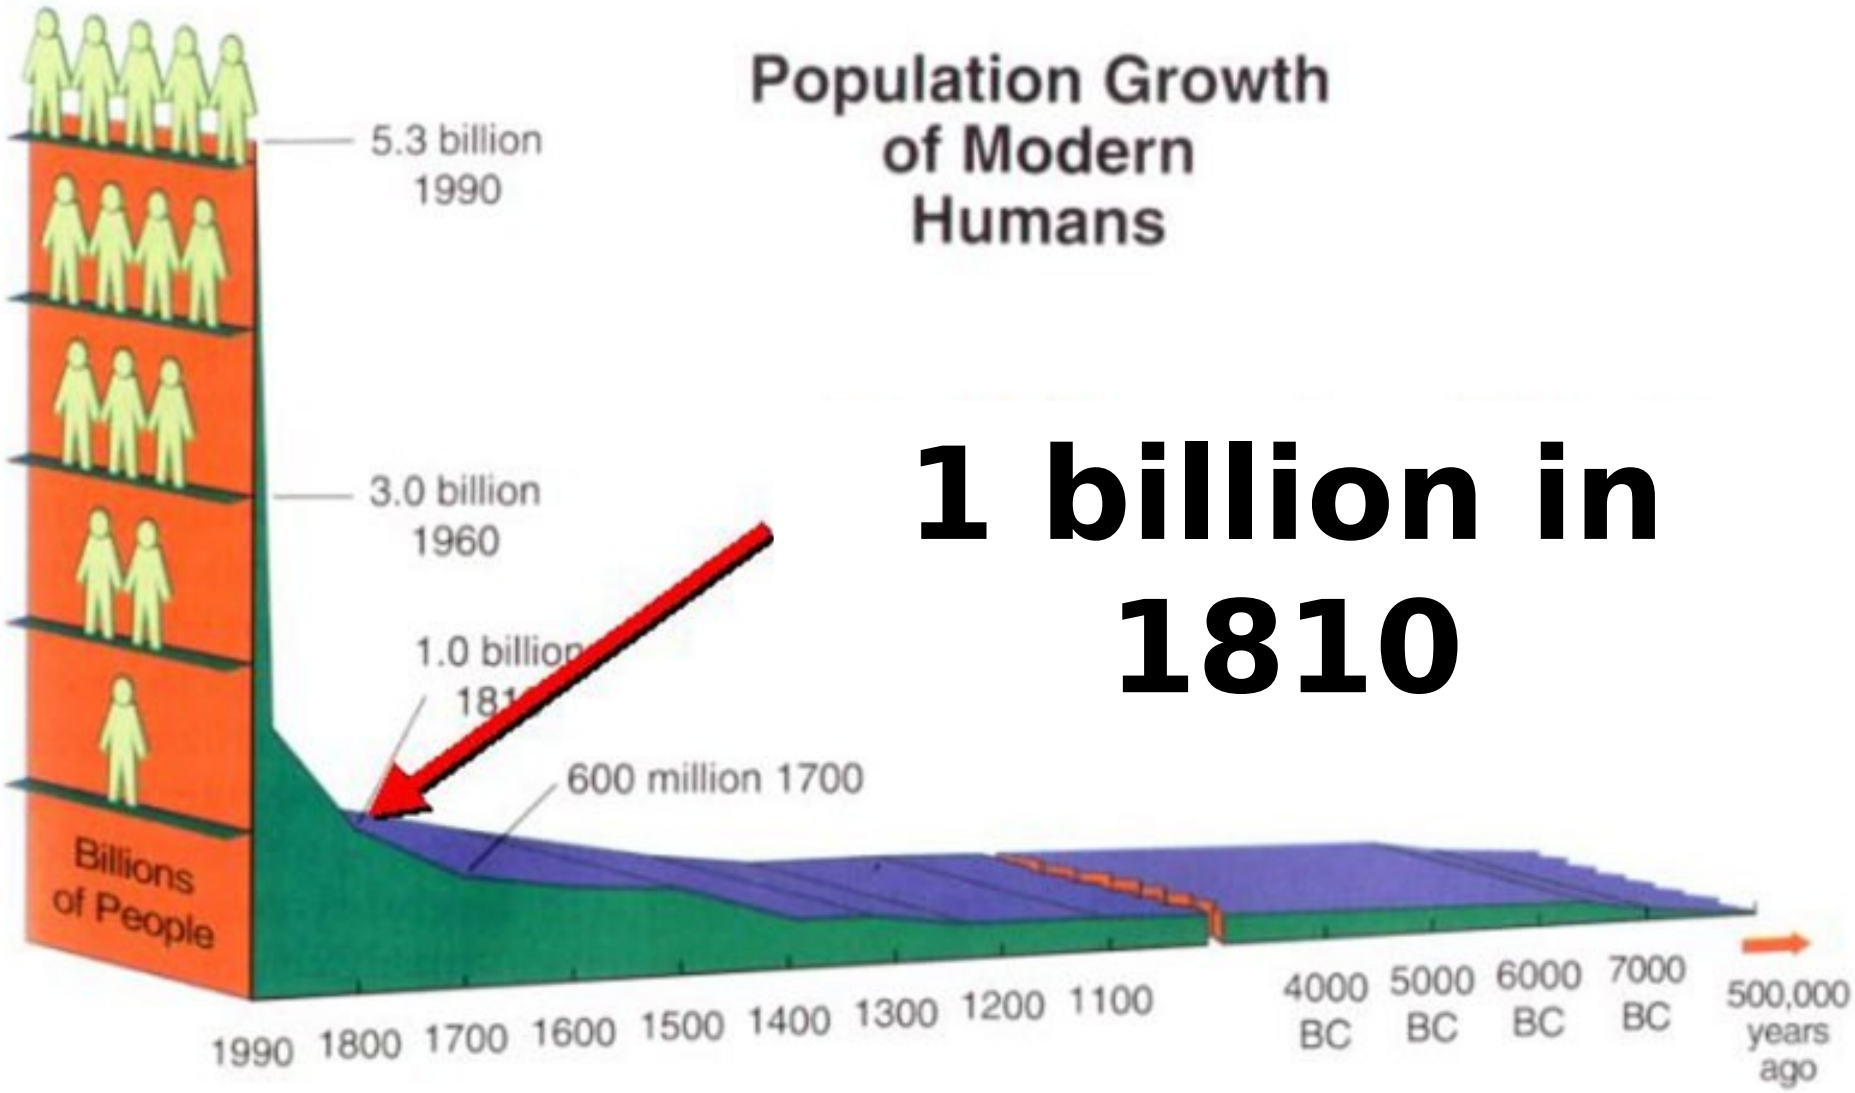

There are numerous scientific ways to show the universe is not billions of years old

Last weekend the world's population topped 6 billion.

Human Populati on Chart

1 billion in 1810

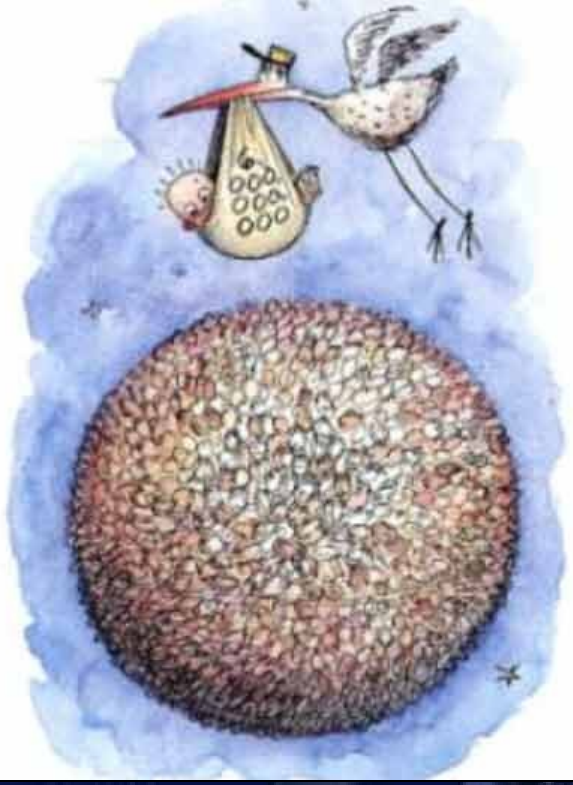

Merrill Earth Science 1993

Global Population Reaches a Milestone

Take a look around on October 12, because it may seem a bit more crowded. On that day, or thereabouts, Earth's population will reach six billion. Although no one knows exactly when baby number six billion will arrive, the United Nations picked October 12 to mark the event, which is almost certain to occur before the end of 1999.

"Six billion is a benchmark," says Carl Haub, senior demographer at the Population Reference Bureau in Washington, D.C. The 20th century began with world population under two billion. "We've added the last billion people in only 12 years. That's phenomenal."

Most of the increase these days takes place in the developing world. "Birthrates have stabilized at low levels in Europe and North America," says Haub. "In the developing world the overall rate of increase

Major investor in ADM- Majority % of world food distribution.

See how Monsanto and other companies have tried to corner the market on food production w/GM foods that have been **banned in Europe.**

70% of US processed foods contains GM foods.

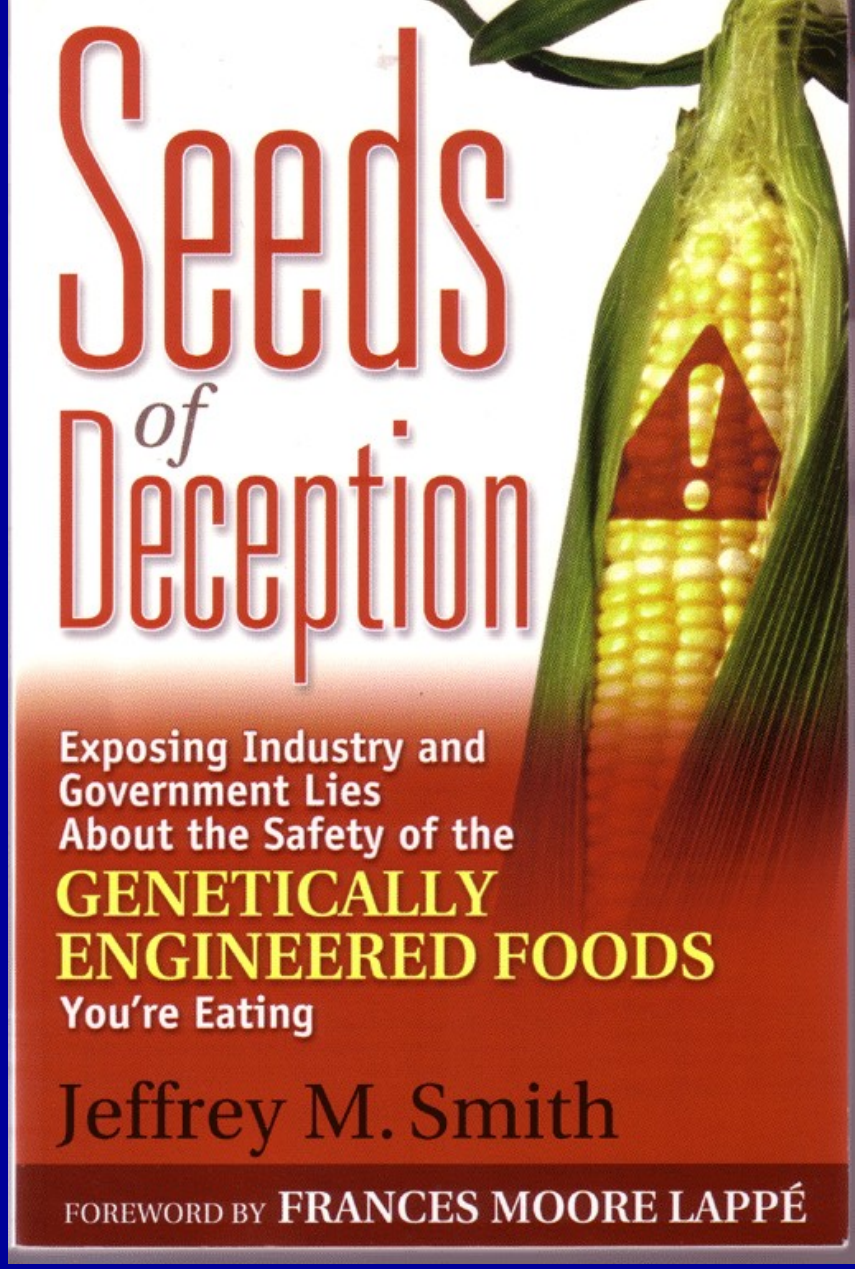

Introduction

On May 23, 2003, President Bush proposed an Initiative to End Hunger in Africa using genetically modified (GM) foods. He also blamed Europe's "unfounded, unscientific fears" of these foods for hindering efforts to end hunger. Bush was convinced that GM foods held the key to greater yields, expanded U.S. exports, and a better world. His rhetoric was not new. It had been passed down from president to president, and delivered to the American people through regular news reports and industry advertisements.

The message was part of a master plan that had been crafted by corporations determined to control the world's food supply. This was made clear at a biotech industry conference in January 1999, where a representative from Arthur Anderson Consulting Group explained how his company had helped Monsanto create that plan. First, they asked Monsanto what their ideal future looked like in fifteen to twenty years. Monsanto executives described a world with 100 percent of all commercial seeds genetically modified and patented. Anderson Consulting then worked backward from that goal, and developed the strategy and tactics to achieve it. They presented Monsanto with the steps and procedures needed to obtain a place of industry dominance in a world in which natural seeds were virtually extinct.

Integral to the plan was Monsanto's influence in government, whose role was to promote the technology worldwide and to help get the foods into the marketplace quickly, before resistance could get in the way. A biotech consultant later said, "The hope of the industry is that over time, the market is so flooded that there's nothing you can do about it. You just sort of surrender."[1]

PLANETARY SCIENCE

Cosmic Misfits Elude Star-Formation Theories

NEWS OF THE WEEK

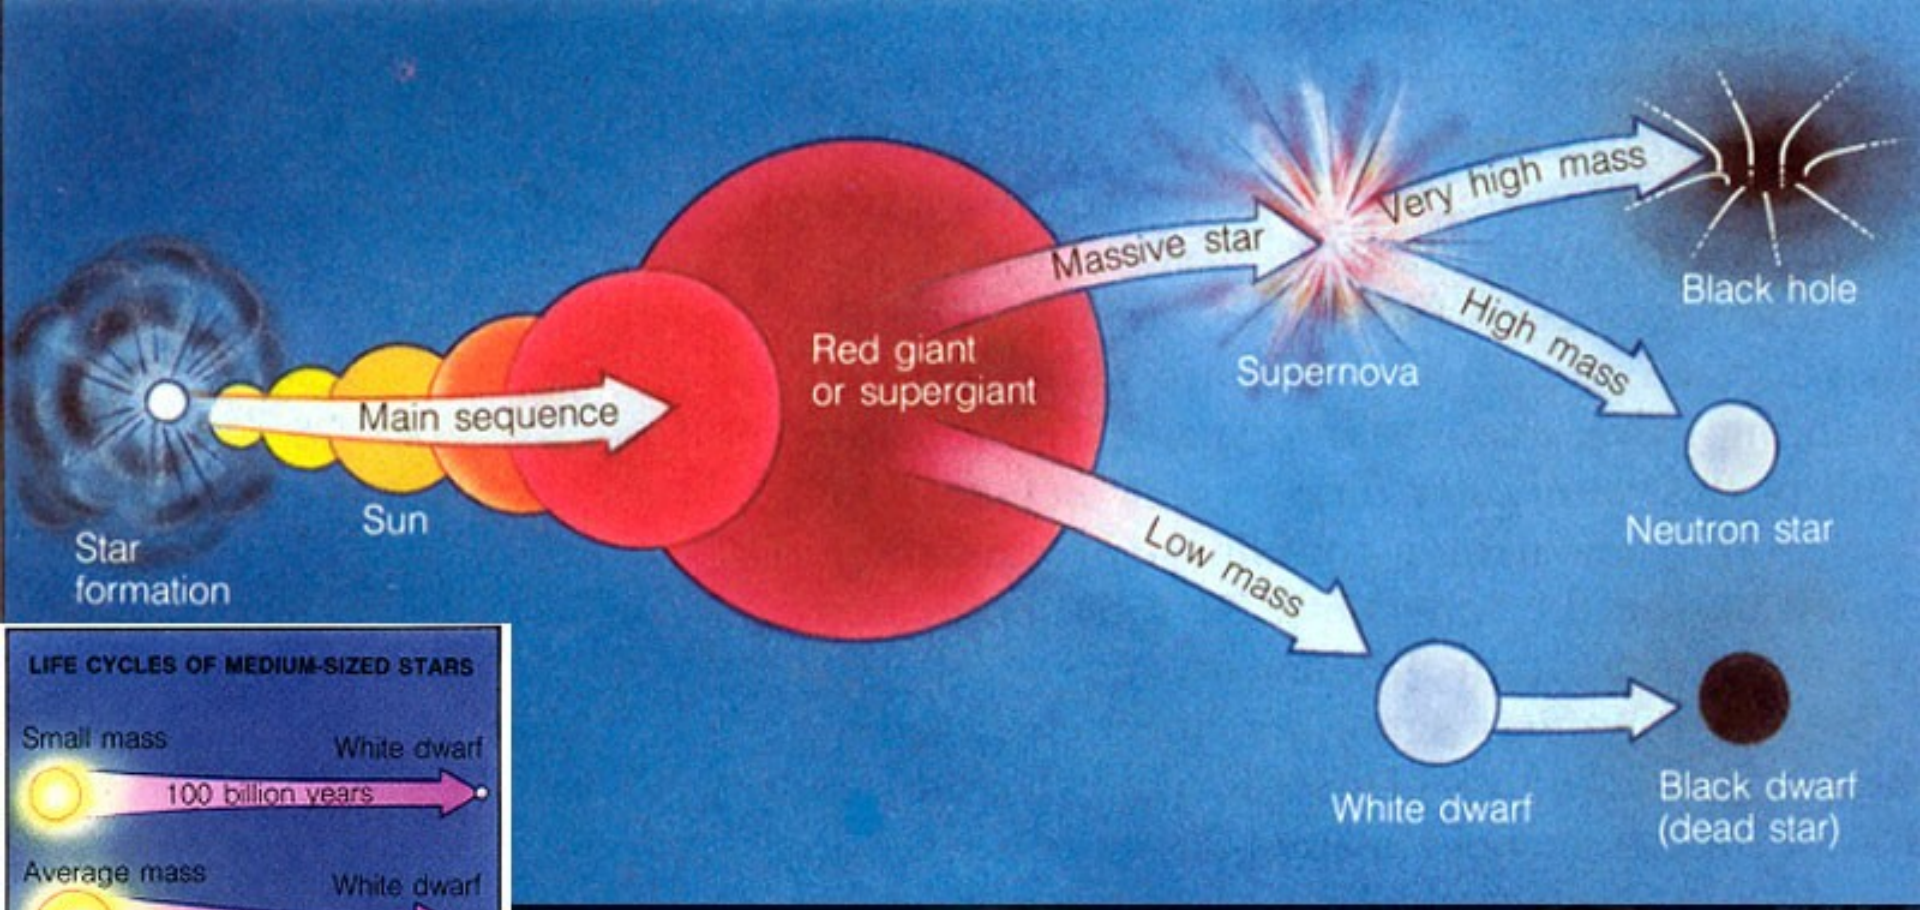

TOKYO—Astronomers have become increasingly perplexed over the last few years by a strange new class of celestial body. Too small to fit conventional definitions of brown dwarfs, they nonetheless move through star-forming regions in a manner that separates them from planets orbiting a star. Once seen as anomalies, their growing numbers are forcing astronomers to sit up and take notice (*Science*, 6 October 2000, p. 26). On 14 February, a Japanese team raised the stakes by reporting its discovery of more than 100 of these objects in a star-forming region known as IC 348. "This poses a big challenge for the standard picture of star formation," says Shu-ichiro Inutsuka, a theorist at Kyoto University.

Yumiko Oasa of the University of Tokyo and colleagues there and at the National Astronomical Observatory of Japan spotted the band of cosmic misfits while using NAOJ's Subaru Telescope on Mauna Kea, Hawaii. They were observing infrared emissions from a region approximately 2000 light-years from Earth in the constellation Cygnus. In addition to hundreds of brown dwarfs, the team spotted more than 100

Jean Najita, an astronomer at the U.S. National Optical Astronomy Observatories in Tucson, Arizona, cautions that more work is needed. In particular, spectroscopic analysis of the objects' emissions would determine their temperature, which could be used to confirm their mass. But Najita says the essential message is believable. "I think these kinds of results show that the process that makes stars can also make things that are subtellar," she says.

Mother lode. More than 100 planetlike objects have been found in a star-forming region called IC 348.

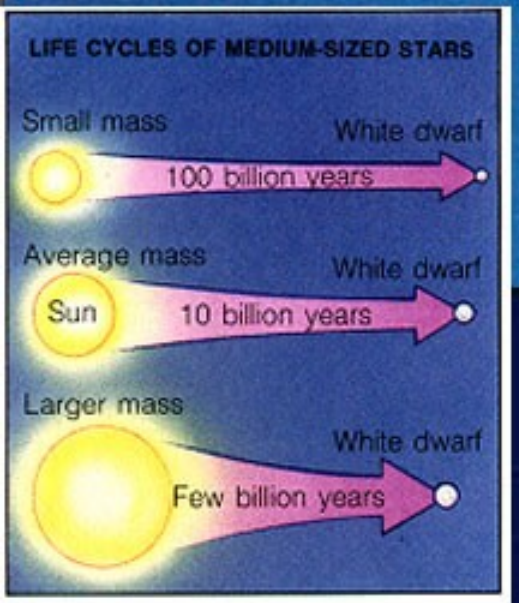

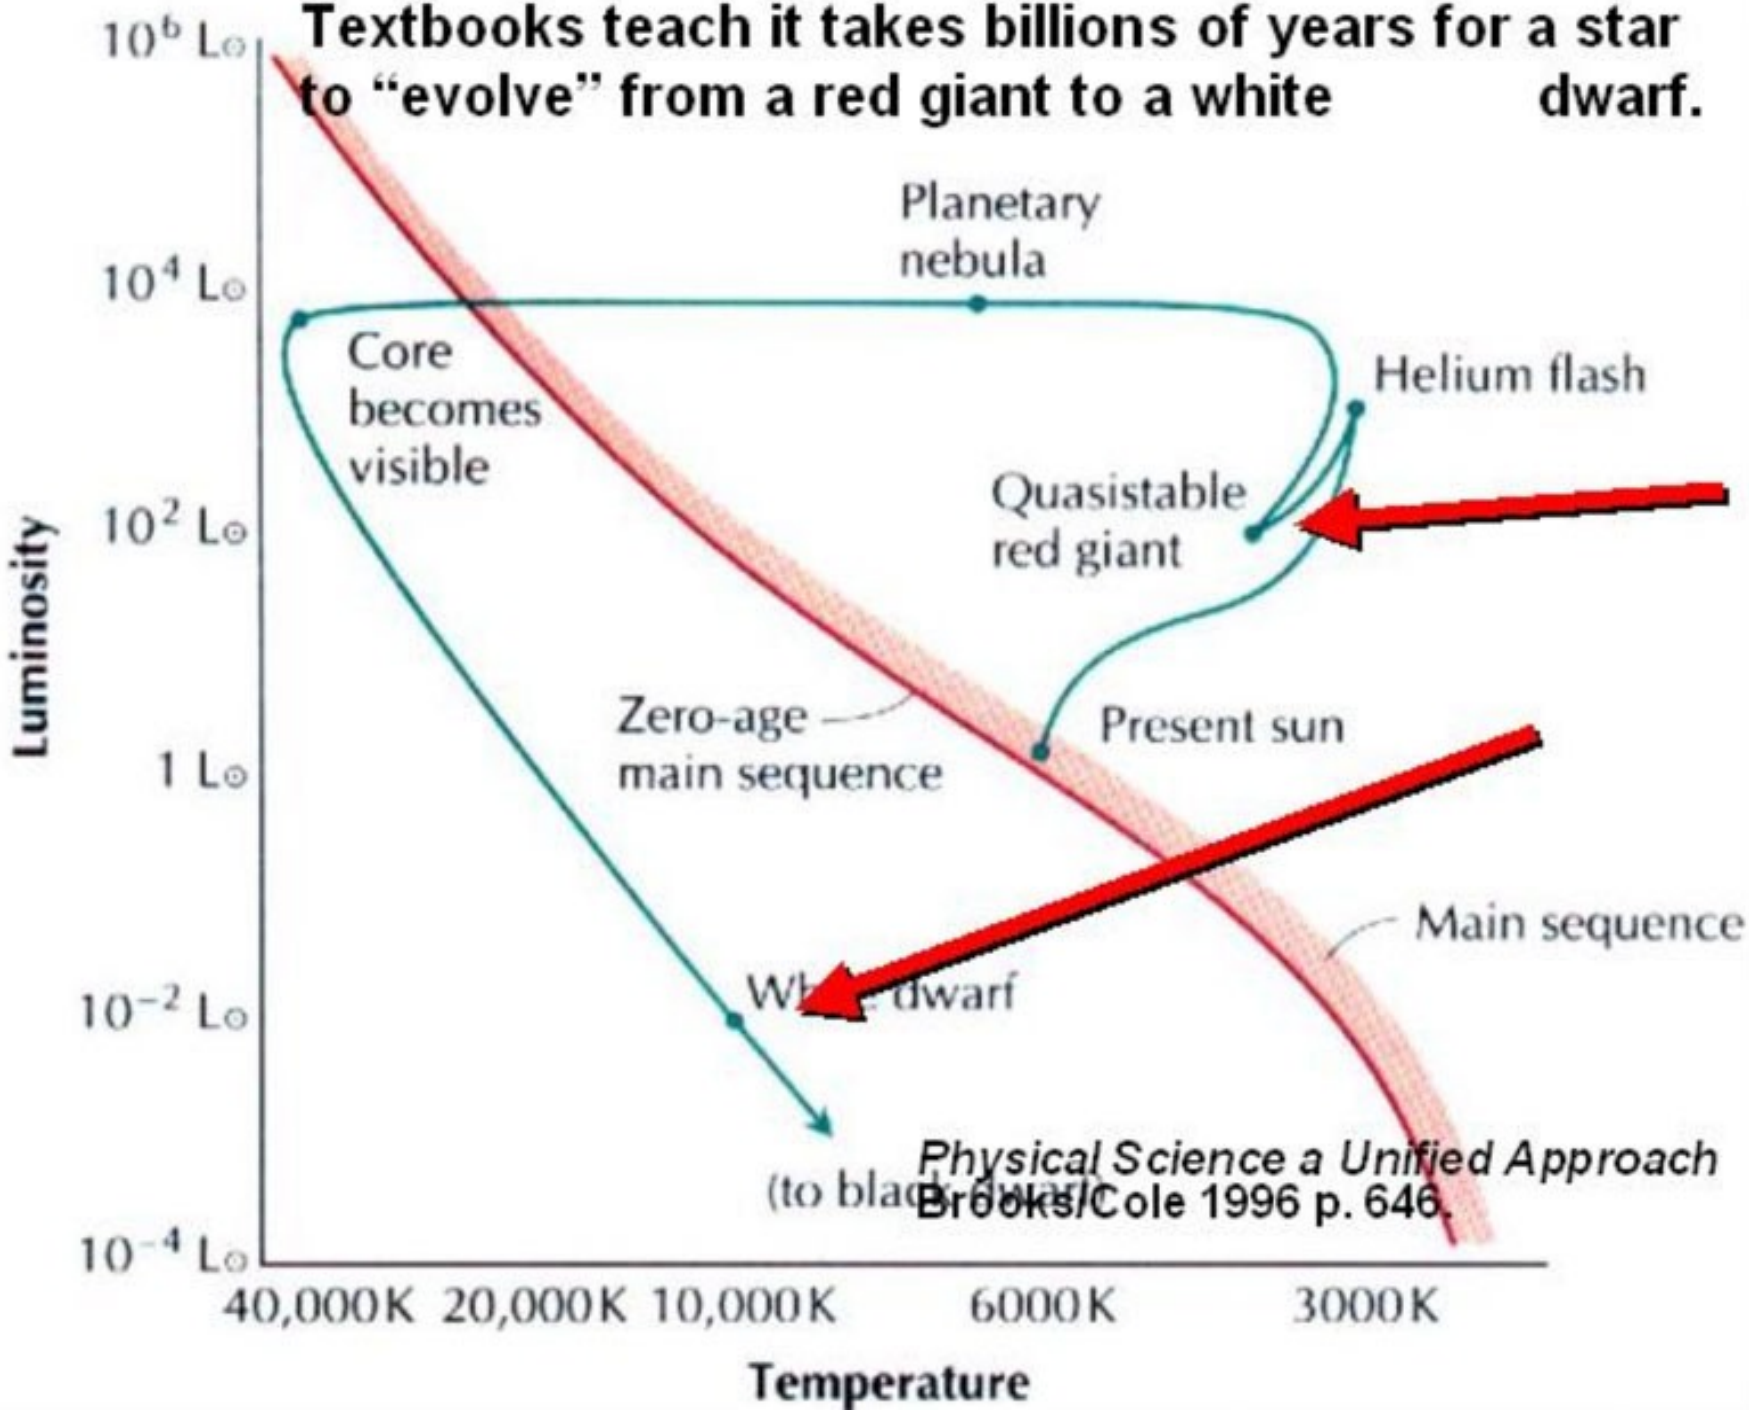

Figure 2–37 *Medium-sized stars all end up as white dwarfs. What is the relationship between mass and the time it takes a medium-sized star to become a white dwarf?*

Textbooks say Red Giant Stars evolve into white dwarf stars over billions of years.

Textbooks teach it takes billions of years for a star to "evolve" from a red giant to a white dwarf.

Physical Science a Unified Approach Brooks/Cole 1996 p. 646.

1. Egyptian hieroglyphs from 2000 B.C. described **Sirius as red.**

2. Cicero, in 50 B.C., stated **Sirius was red.**

3. Seneca described Sirius as being **redder than Mars.**

4. Ptolemy listed Sirius as one of the **six red stars** in 150 A.D.

Today it is a white star-binary.

Textbooks say it should take

Jupiter is cooling off.

No. 110 — YOUNG AGE FOR THE MOON AND EARTH

By Dr. Thomas G. Barnes

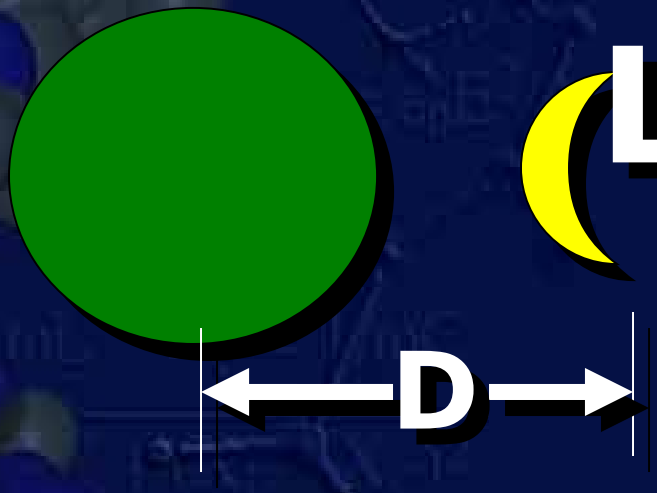

The Inverse Square Law:

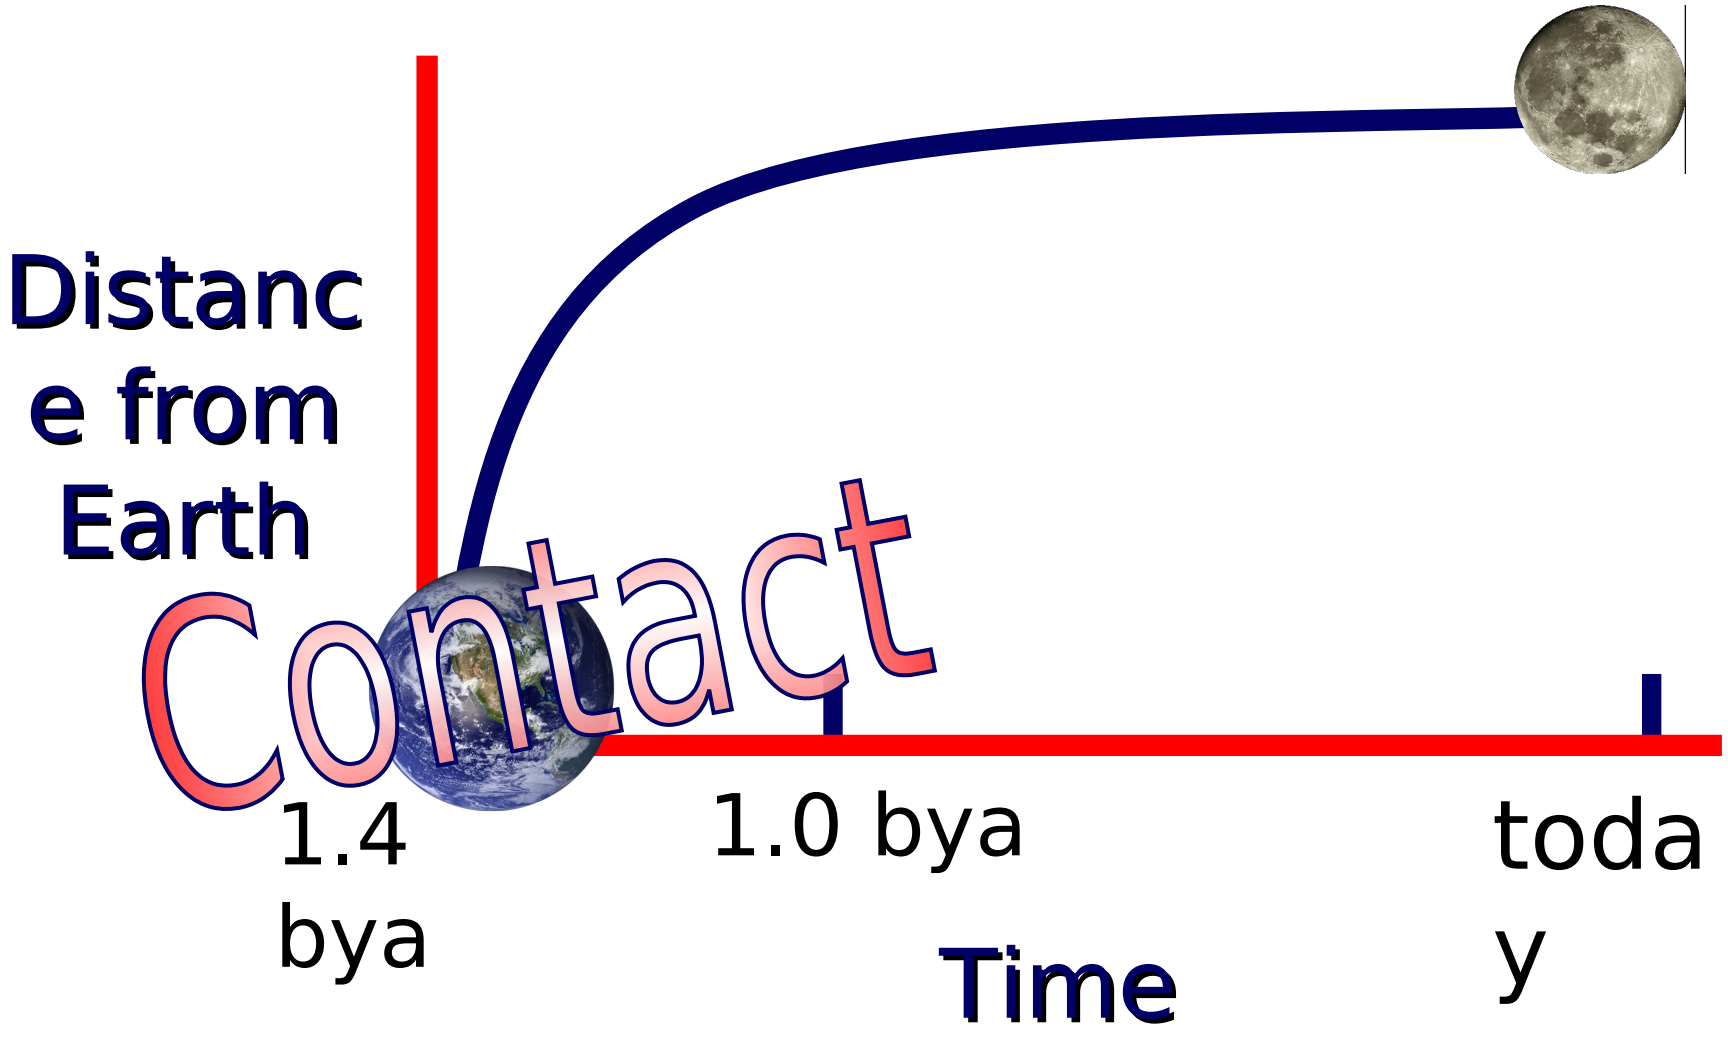

The force of attraction between two objects is inversely proportional to the square of the distance

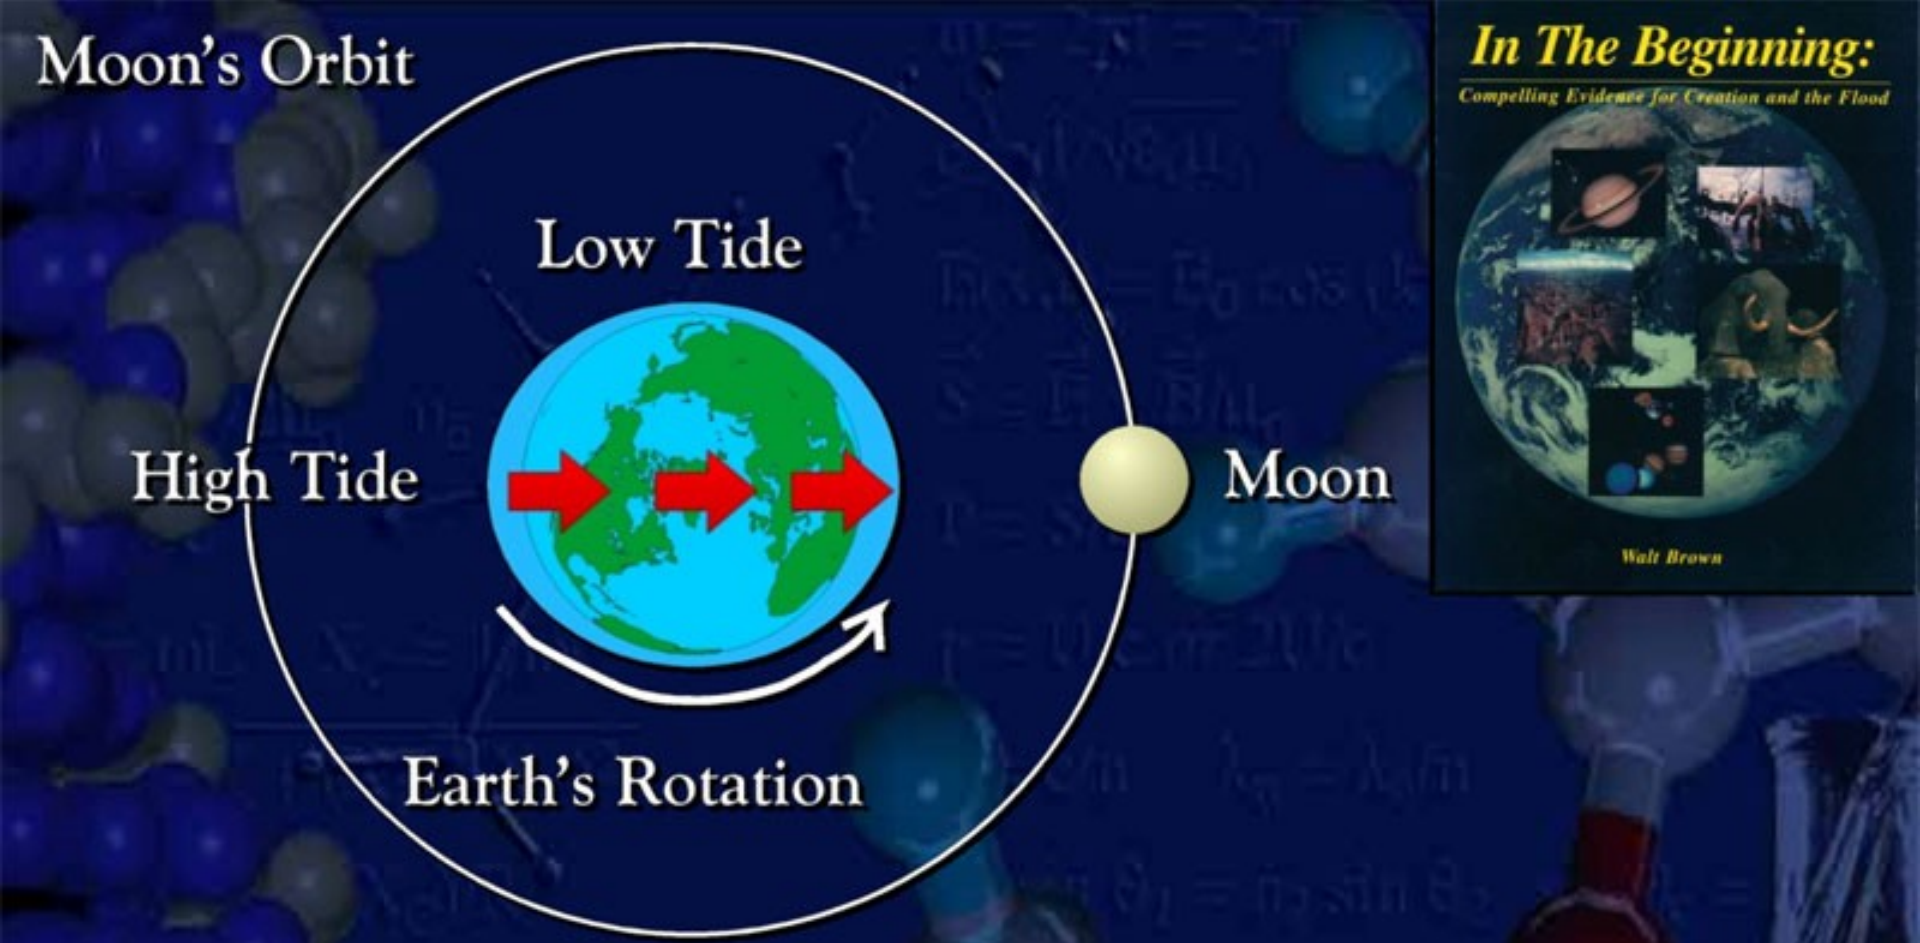

The Inverse Square Law:

If the distance is 1/3, the force of attraction between two objects is 9 times greater.

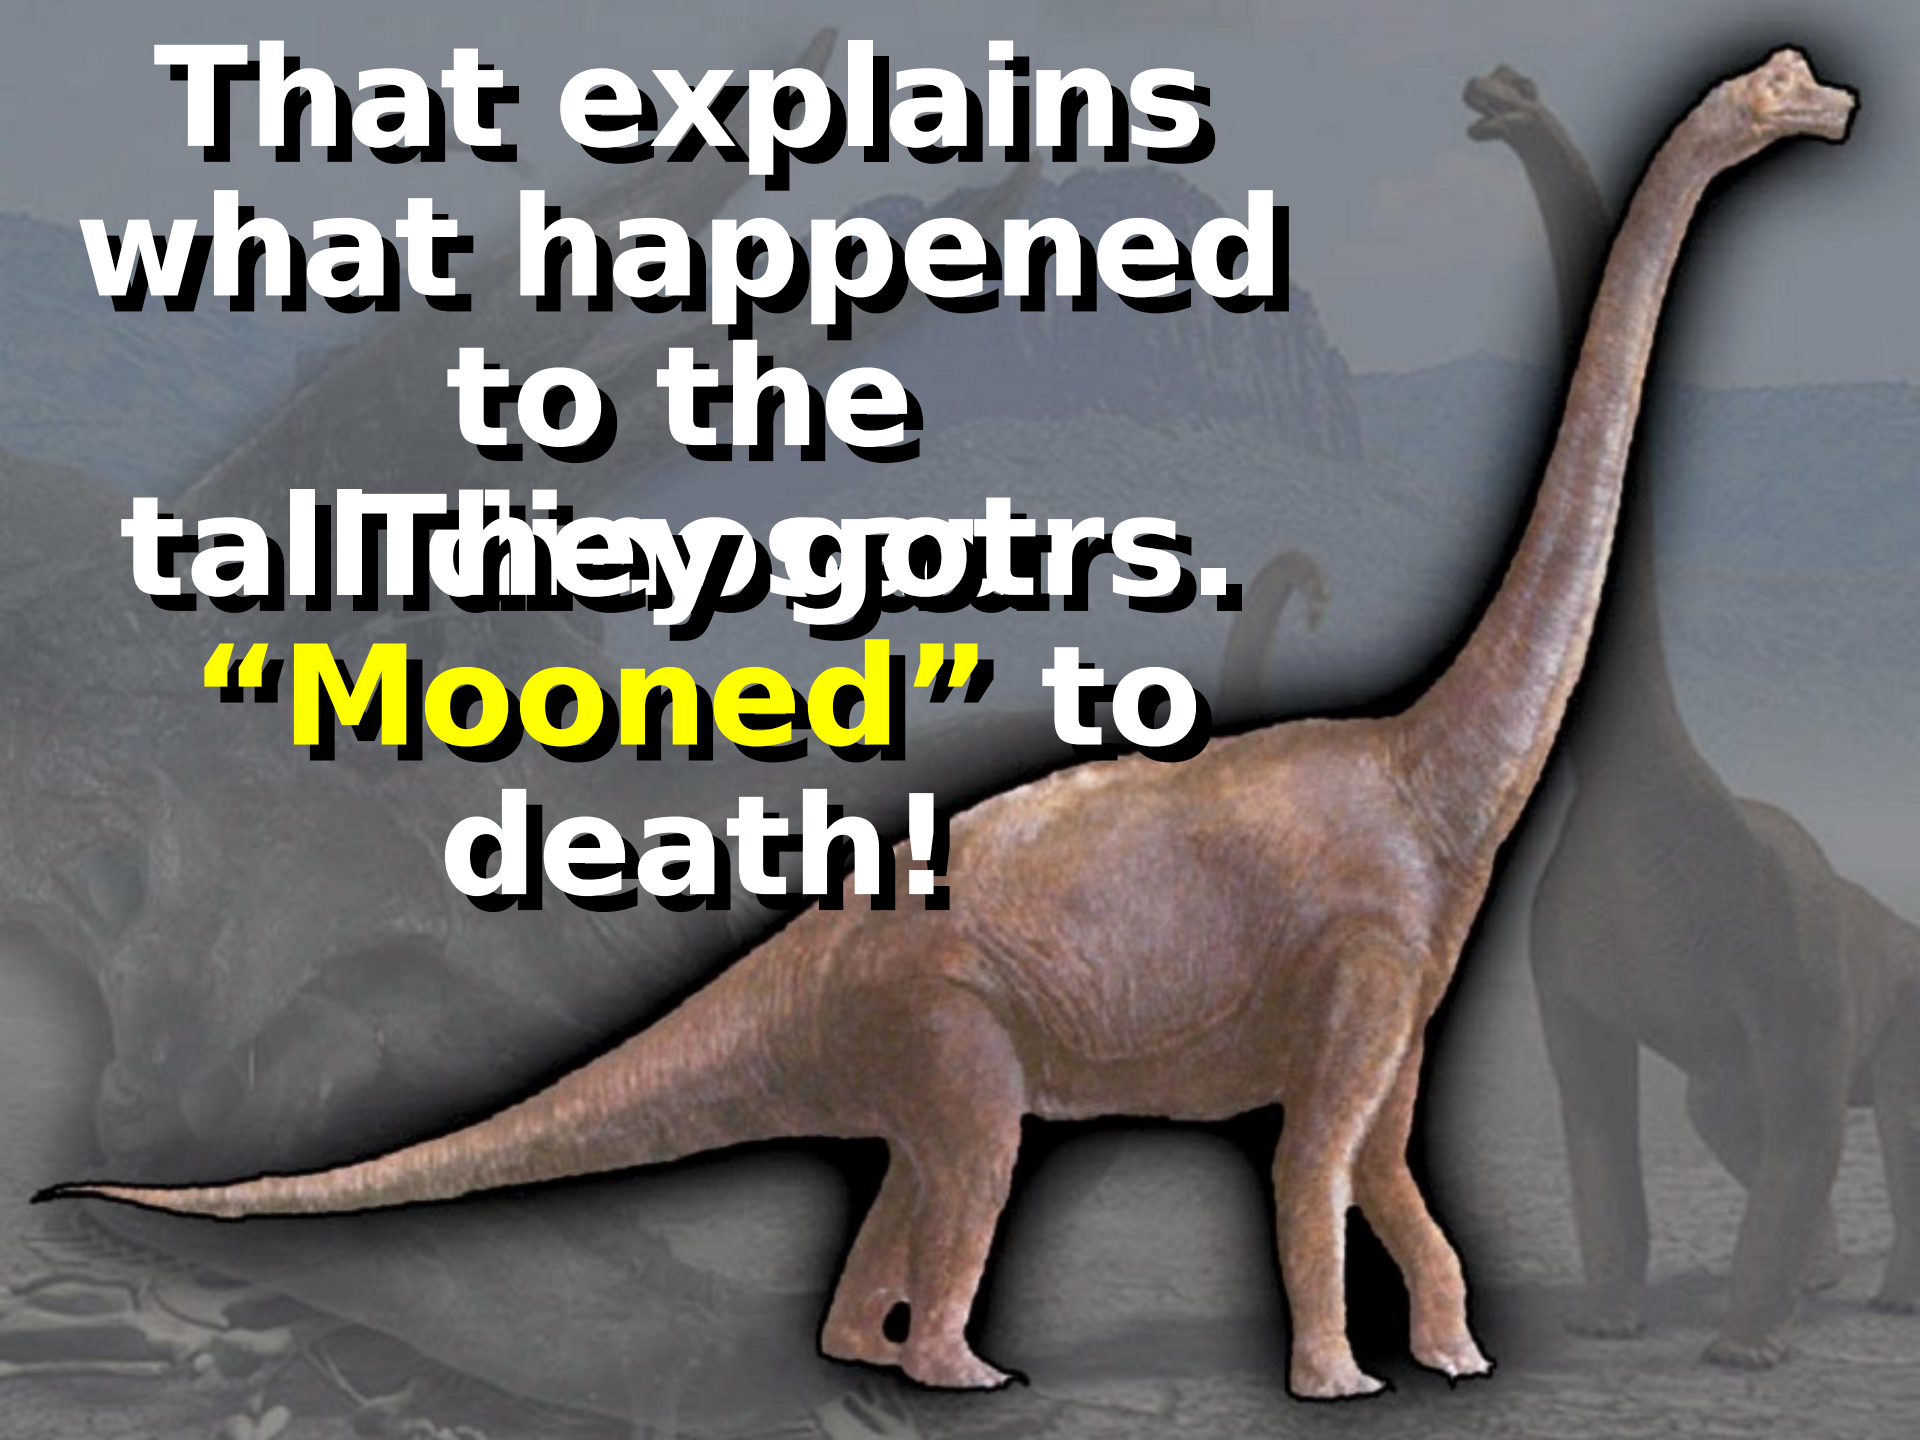

Recession of the Moon

This fact alone puts the age of the Earth/Moon system at less than 1.2 billion year max.

In the Beginning by Walt Brown, available from *

That explains what happened to the tall ones.
They got
"Mooned" to death!

The earth is spinning over 1000 mph at the Equator

Pensacola News Journal, 12/6/1990

Give 1990 one last tick before ushering in 1991

WASHINGTON — When you count off the final seconds of 1990, wait just an instant before cheering in 1991.

By international agreement, an extra tick will be placed between 1990 and 1991 to keep regular clocks in line with atomic clocks.

Atomic clocks are tuned to a particular quiver of the cesium atom and are accurate to a billionth of a second a day. But regular clocks use days as a measure, which are growing longer by a thousandth of a second or more daily as Earth's rotation slows.

Left unadjusted, the two systems could drift apart by almost a minute in a lifetime, making life difficult for astronomers, pilots, navigators and anyone trying to point an earth dish at a satellite.

Time to Kill

"Earth's Rotation is slowing down.

To compensate for this lagging motion, June will be one second longer than normal. This 'Leap Second' announced by the International Earth Rotation Service in February, will keep calendar time in close alignment with international time."

-Astronomy Magazine, June 1992, p. 24

International Earth Rotation Service

Earth in Line for Time Tune-up

The International Earth Rotation Service has announced that an extra second will be added to the month of June. A leap second, first introduced in 1972, can be applied twice a year to keep universal time (UT) synchronized with international atomic time (IAT). IAT is based upon vibrational frequencies found in atoms and molecules employed by various atomic clocks around the world.

Atomic clocks have an accuracy of around one part in a billion, while UT, based upon the daily motion of stars over Greenwich, England, lacks comparable accuracy due to variations in Earth's rotation.

Pull up a chair and tune into the event by listening to U.S. National Bureau of Standards time signal station WWV, located at 2.5, 5, 10, 15, and 20 MHz on your shortwave radio. Canadian listeners can tune into CHU Canada at 3.330, 7.335, and 14.670 MHz.

Festivities commence at one second to midnight (UT) June 30; that's 7:59:59 p.m. EDT. No radio, you say? Call the U.S. Naval Observatory master clock at (202) 653-1800.

be drilled to bring them up from the layers deep below.

Oil and gas The other two major fossil fuels are **petroleum** and **natural gas.** The formation of these two fuels is not yet fully understood. Both are thought to form from the decay of organisms that once lived in the sea. The remains of these organisms settled to the sea floor and were gradually covered by sediments. After millions of years, the remains were slowly changed by heat and pressure into a substance made mostly of hydrogen and carbon. Such substances are called **hydrocarbons.** *Petroleum,* which is often called oil, and *natural gas* are mixtures of many different *hydrocarbons.*

Oil and gas are from "organisms that once lived in the sea. … changed by heat and pressure"… into oil.

THE LOST SQUADRON

Deeply buried missing planes challenge 'slow and gradual' preconceptions.

Carl Wieland

FROM a secret US Army air base in Greenland, six P-38 Lightning fighter planes and two gigantic B-17 Flying Fortress bombers rose into the early dawn. The date was July 15, 1942, and they were headed for a British airfield to join the war against Hitler.

Heading east over the polar icecap, they ran into a massive blizzard. Flying blind, they hoped that their first planned refuelling stop, in Iceland, was 'socked in', forcing them to return to their home base. As they approached this, however, critically low on fuel, they found that it, too, was closed. Realising that their only hope was to crashland on the ice waste of Greenland's east coast, they desperately searched till they found a break in the cloud cover.

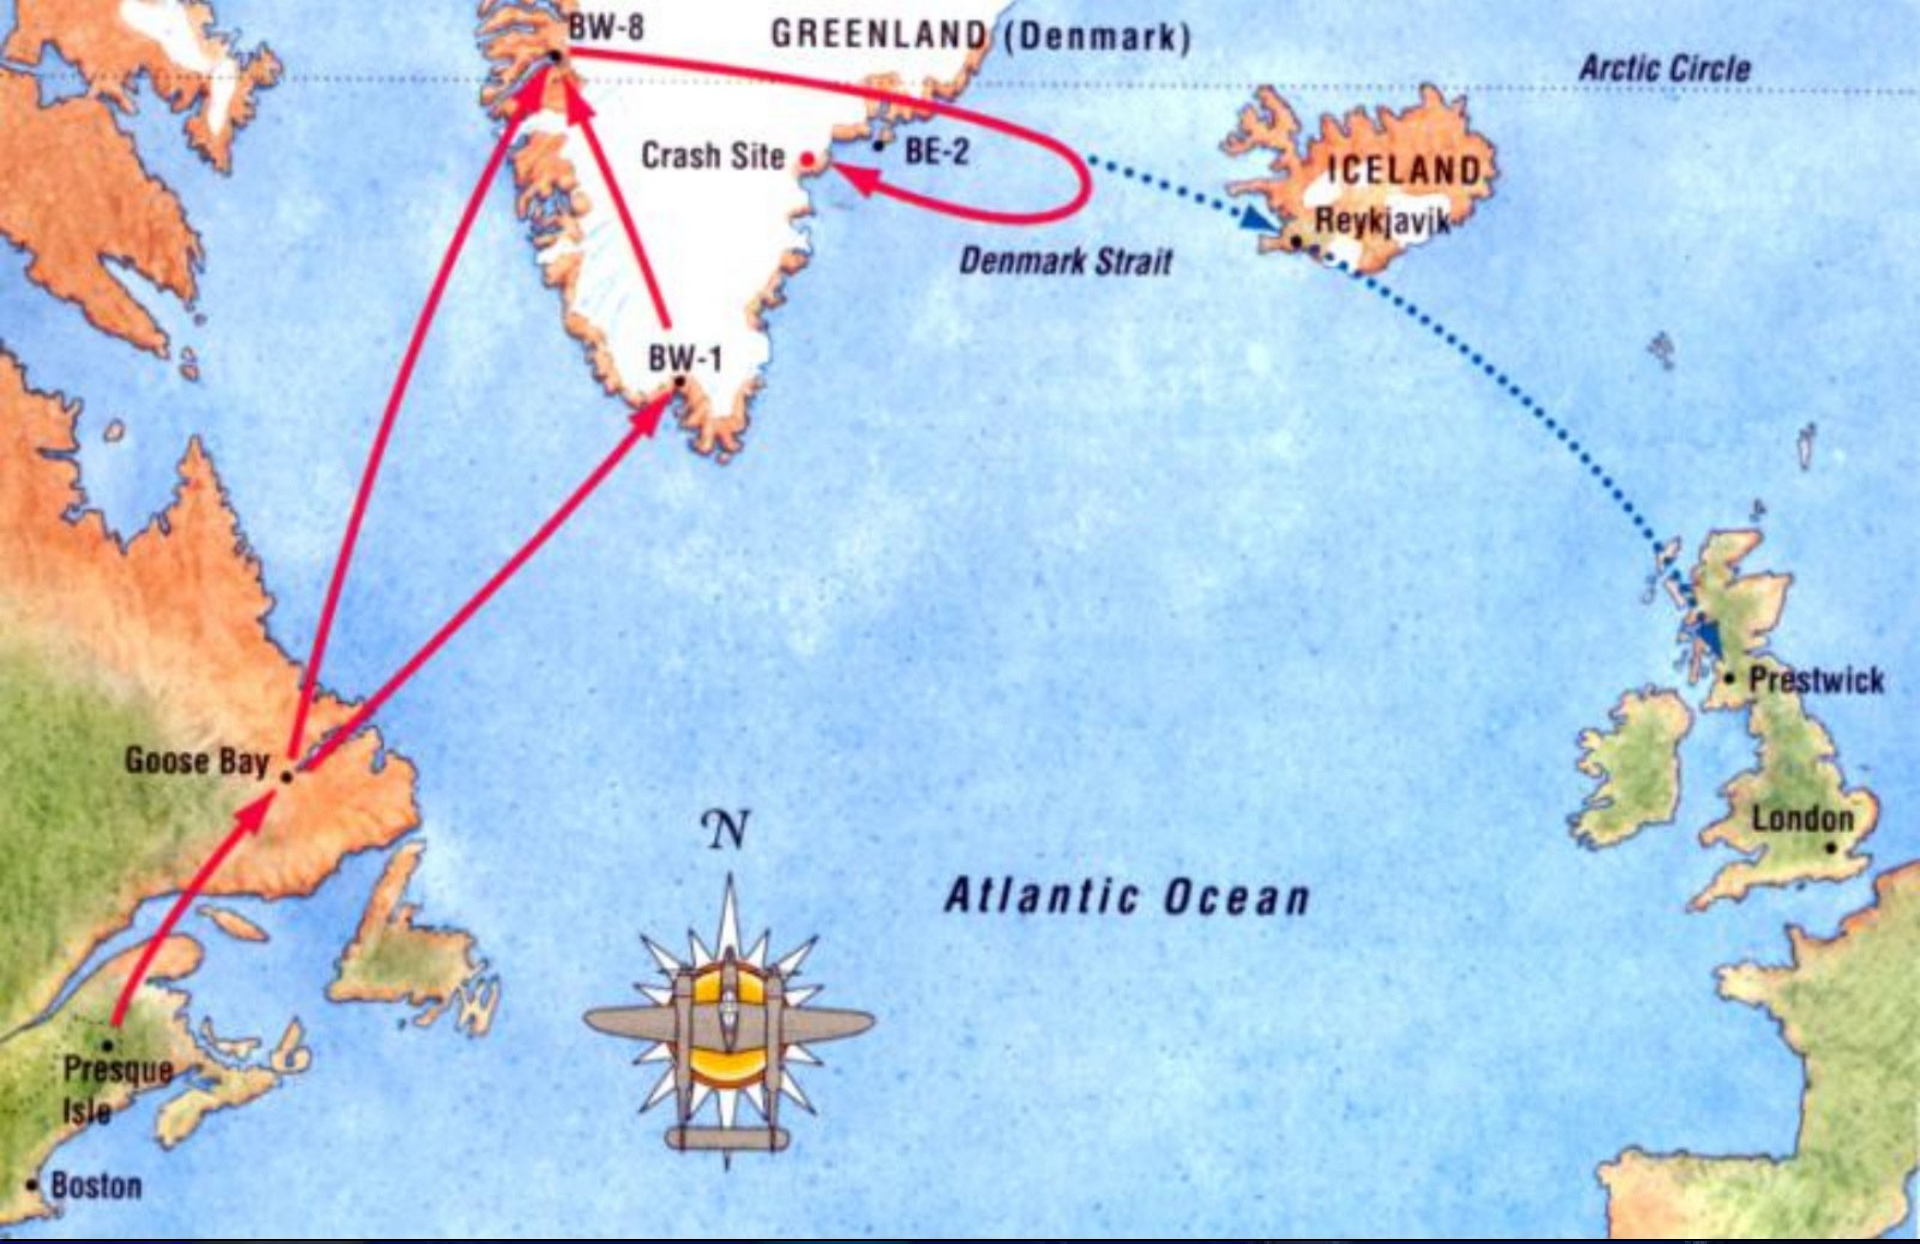

The navigator of the first plane to land hit a crevasse, which ruined it to flip. Fortunately, the impact on the canopy of the 8-ton P-38 was cushioned by snow, and the pilot's injuries were minor. After they saw this, the rest of the squadron came in with their wheels up for belly landings. The planes were only lightly damaged.

All the crewmen were rescued unharmed by dogsled, about nine days later. However, the planes had to be abandoned where they had slithered to a stop.

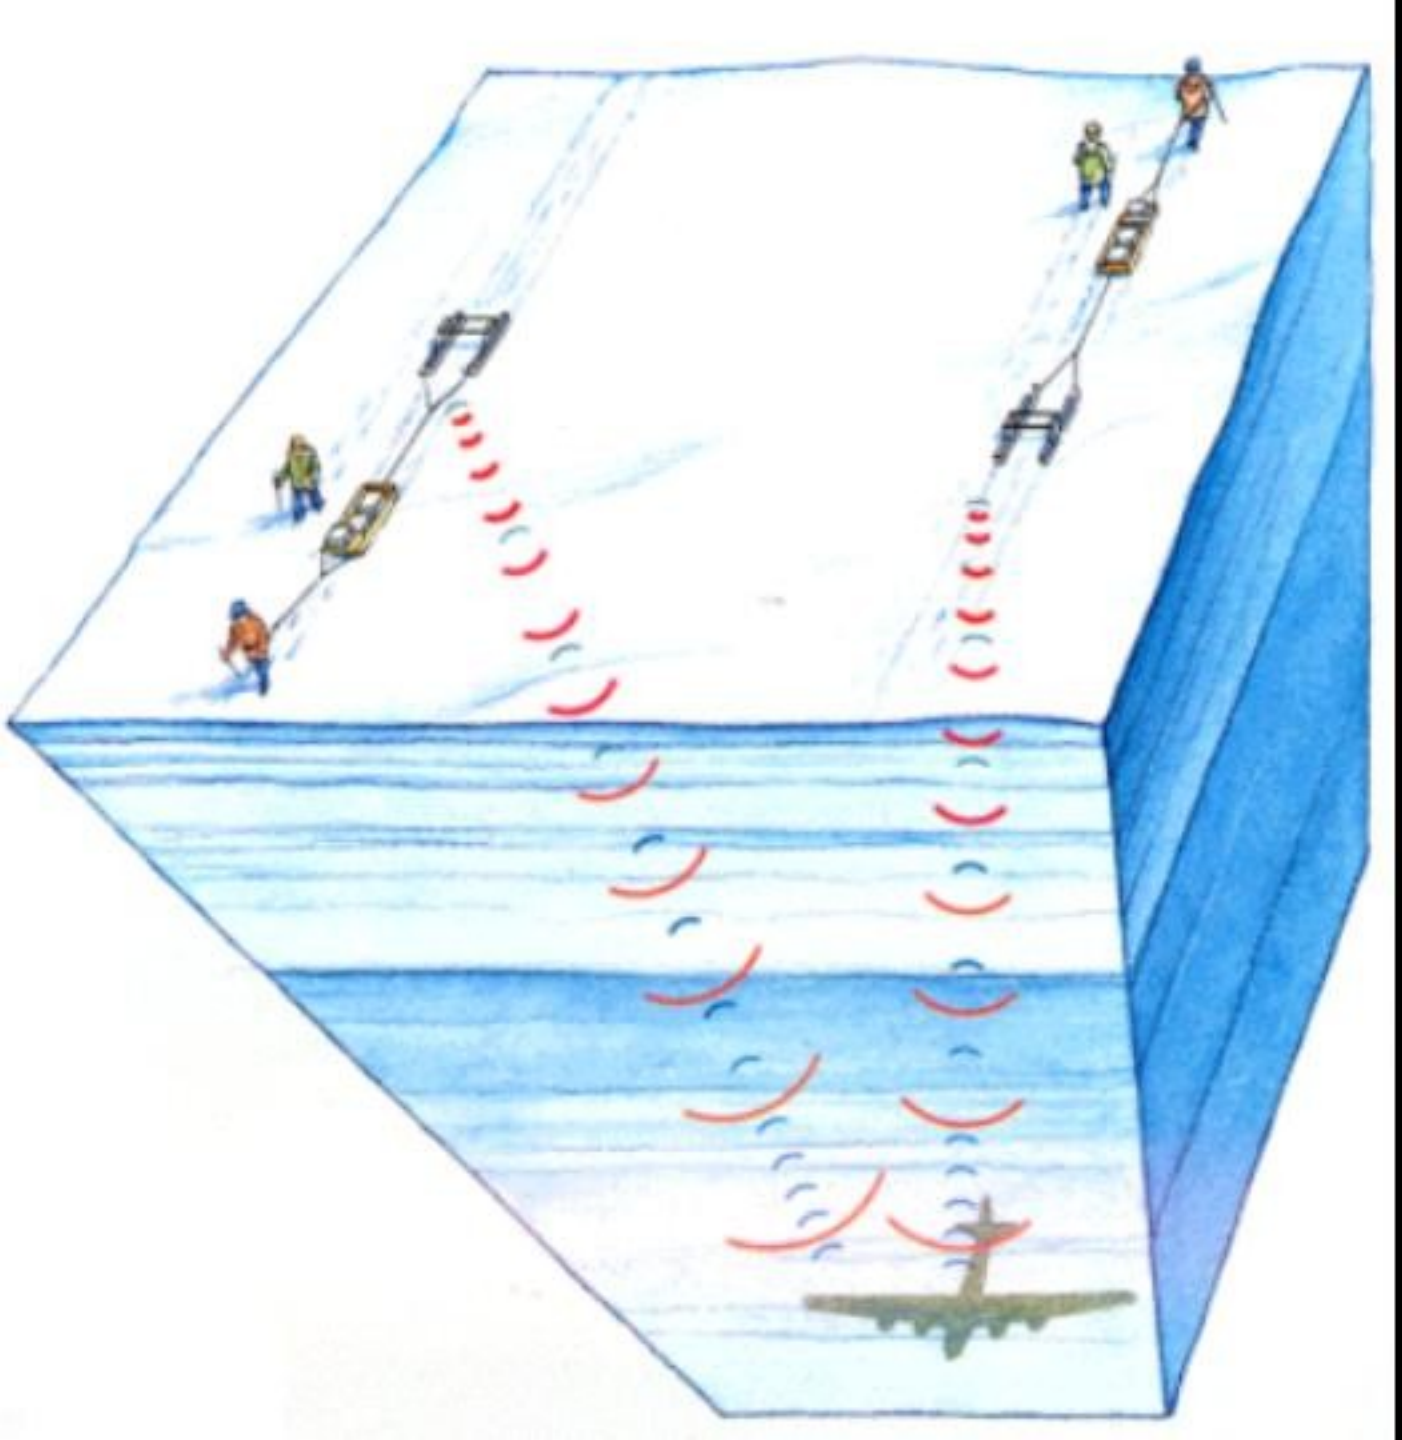

In the years to follow, a few people occasionally recalled the legendary Lost Squadron of 1942, but it was only in 1988 that anyone thought of a salvage mission. U.S. airplane dealer Patrick Epps told his

Main picture: Workers prepare to lift sections of an amazingly well preserved P-38 aircraft to the surface from inside its icy tomb, just as it was left decades ago. Photo by Louis Sapienza

Fossilization is not a slow process!

Petrified cowboy leg found in a dry creek bed near the West Texas town of Iraan, about 1980 by Mr. Jerry Stone, an employee of Corvette Oil company.

The bones of the partial leg and foot within the boot were revealed by an elaborate set of C.T. Scans performed at Harris Methodist Hospital in Bedford, Texas on July 24, 1997. The Radiologic Technician was Evelyn Americus, AART. A complete set of these scans remains with the boot at the Creation Evidence Museum in

The process of sedimentation—the piling up layer by layer of dust, dirt, and sand that will one day become hardened rock—still goes on. As you read these words, the fossils of tomorrow are being trapped in the sediment at the bottoms of rivers, lakes, and seas of today. For example, the Mississipp River deposits sediments at a rate of 80,000 tons an hour—day after day, year after year—at the point where the river flows into the Gulf of Mexico.

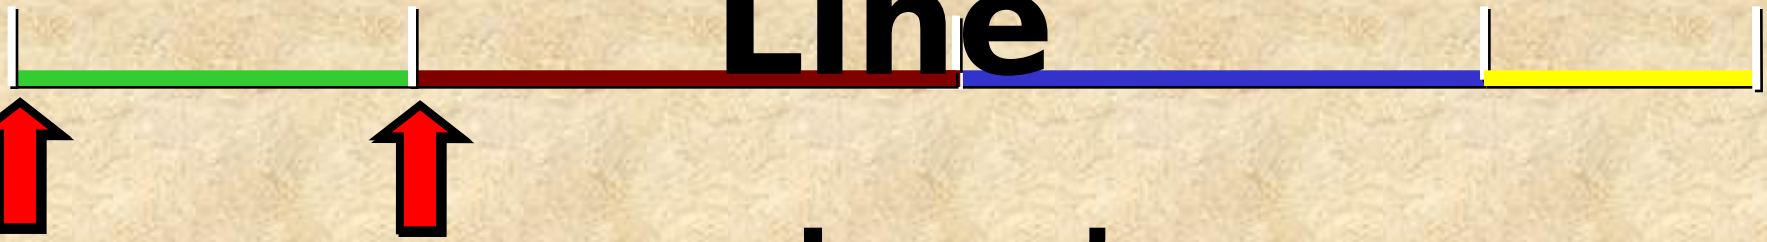

Where does all that sediment come from? The

Bristle cone Pines grow very slowly! This log at the Dinosaur Adventure Land Museum is about 30 inches yet is over 700 years old!

Figure 10.B Each year a growing tree produces a layer of new cells beneath the bark. If the tree is felled and the trunk examined (or if a core is taken, to avoid cutting the tree), each year's growth can be seen as a ring. Because the amount of growth (thickness of a ring) depends upon precipitation and temperature, tree rings are useful records of past climates. (Photo by Stephen J. Krasemann/DRK Photo)

Tree ring dating is not an exact science. Trees often produce more than one ring each year.

http://www.sonic.net/bristlecone/martyr.html

Tree ring dating is not an exact science. Overlapping tree ring dating has many serious problems and assumptions.

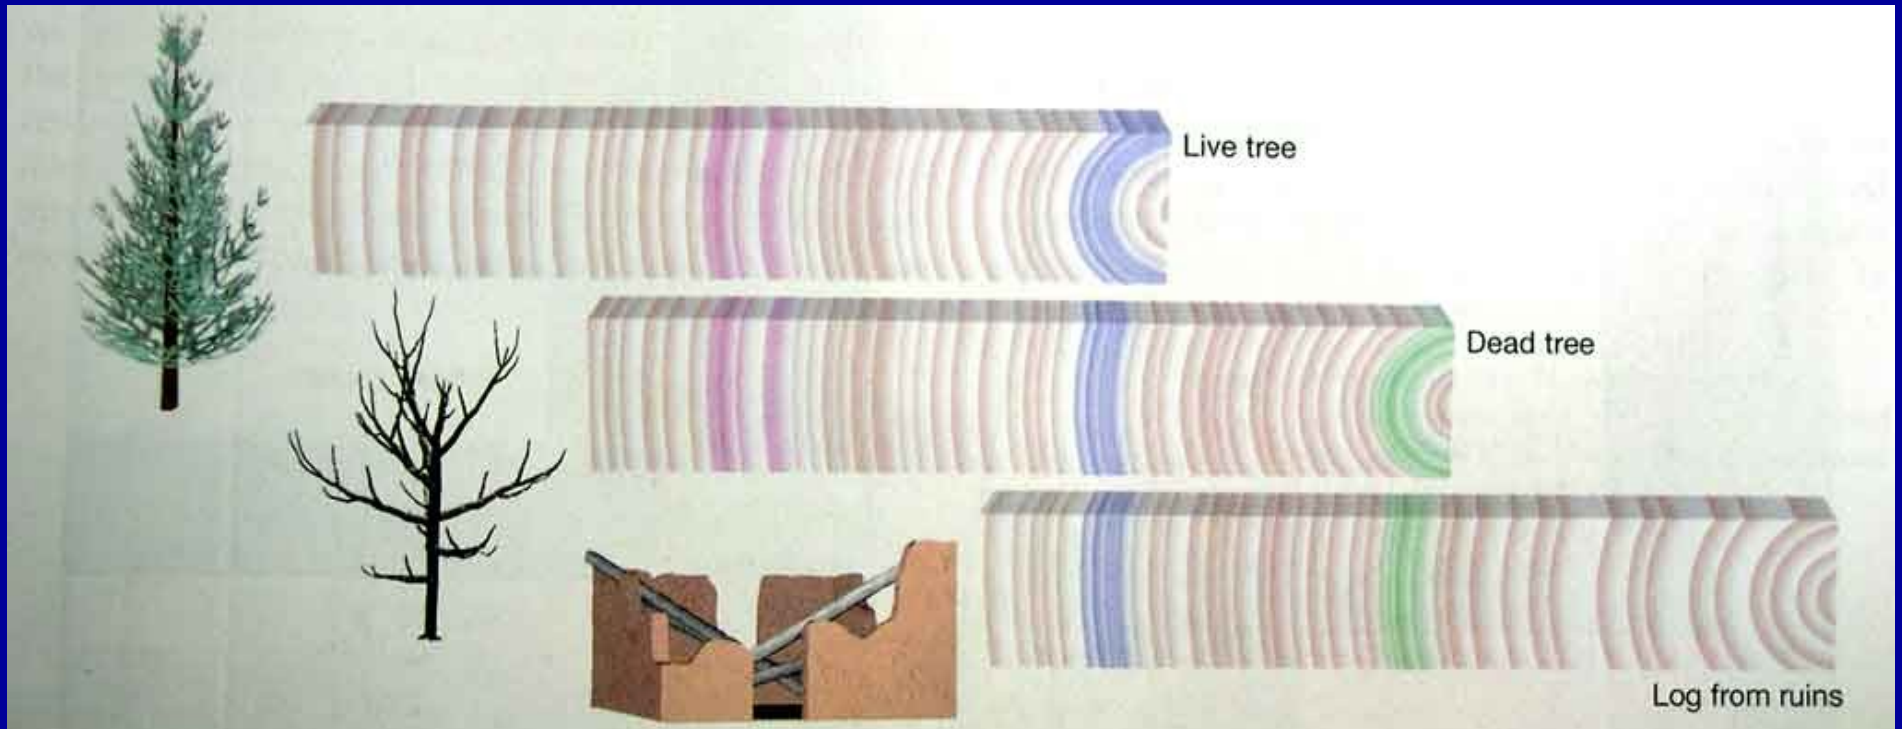

Figure 10.C Cross dating is a basic principle in dendrochronology. Here it was used to date an archaeological site by correlating tree-ring patterns for wood from trees of three different ages. First, a tree-ring chronology for the area is established using cores extracted from living trees. This chronology is extended further back in time by matching overlapping patterns from older, dead trees. Finally, cores taken from beams inside the ruin are dated using the chronology established from the other two sites.

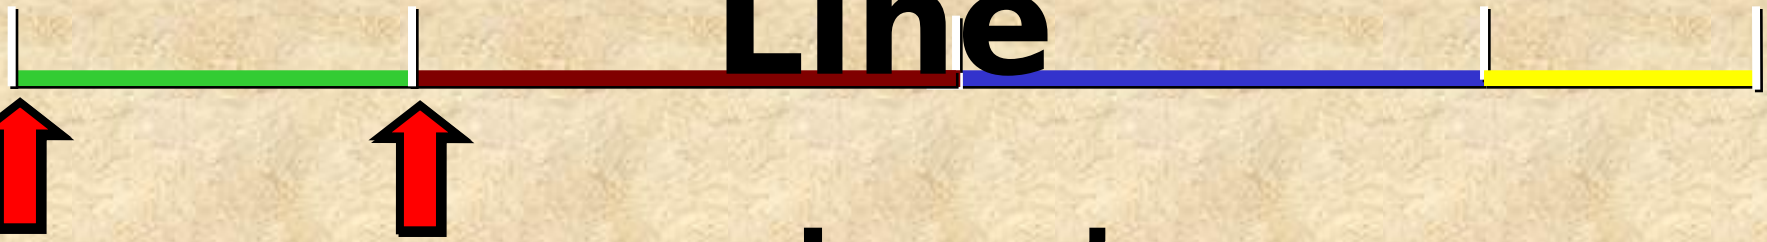

10-18 4300-year-old bristlecone pine, earth's oldest organism, has little active tissue.

4300 would be the max. for this tree. It is probably younger. Some trees with more rings have now been counted but the actual age of 4300 is more reasonable.

The General Sherman tree was thought to be 5-6,000 years old. Tests showed only 2,000 rings!

Washington Post, Science section, date ?

SCIENCE

Scientist trims 3,000 years off largest tree

The Washington Post

The world's largest tree is apparently younger than had been thought.

"General Sherman," a sequoia 275 feet tall and 30 feet across at its base in California's Sequoia National Park, had been thought to be between 5,000 and 6,000 years old.

But a new analysis by ecologist Nate Stephenson of the U.S. Geological Survey concludes that the towering tree is no more than 2,000 years old. Stephenson analyzed pencil-thin, foot-long cores of wood removed from seven of the largest known sequoias, including the Sherman tree.

The analysis concluded that many of them, including Sherman, are much younger than had been thought, Stephenson reports in a paper to be published in the botanical journal Madrono.

"The Sherman tree isn't so large because it's exceptionally old, but because it's growing so fast," he said. "Each year it adds enough wood to make a tree 1 foot in diameter and more than 100 feet tall."

NIAGARA
FROM THE AIR

FIG. 18–8. Niagara Falls was formed by weak rocks that rapidly wore back, cutting a long gorge.

ledge has been studied for about two hundred years. Geologists have found that the falls move back at an average rate of four feet a year. See Figure 18-8. A gorge about seven and a half miles long runs just below Niagara Falls. A simple calculation shows that it has been 9900 years since the Niagara River started cutting its gorge back from Lake Ontario. The cut-back probably began when ice from the glaciers of the last ice age started to melt.

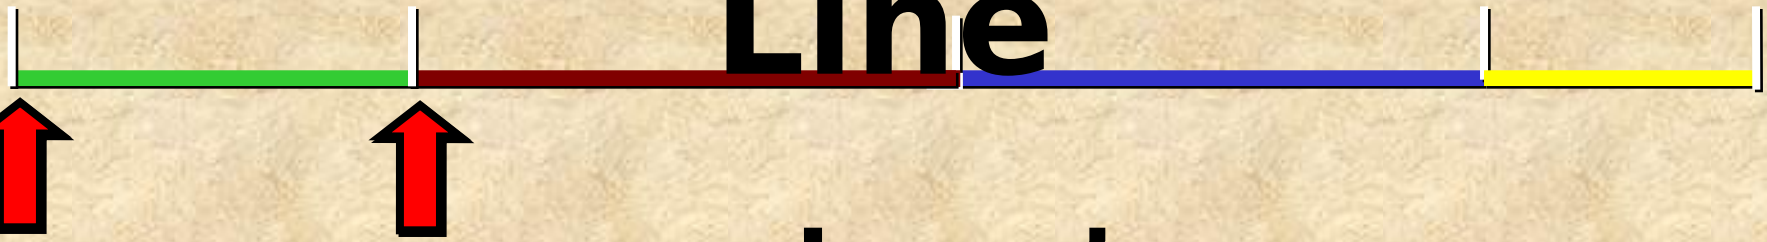

Estimating geologic age by rates of erosion is most practical with relatively recent geologic features such as Niagara Falls. For older features, like the Grand Canyon, the method is much less dependable. The Grand Canyon developed over millions of years and conditions change during such long intervals of time. There is no way to be sure that the rate of erosion remains constant over many millions of years. HOLT EARTH SCI 1984 P 384

“A gorge about 7 ½ miles long runs just below Niagara Falls. A simple calculation show that it has been 9900 years...” **Holt Earth Science, 1984, p. 384**

Bat covered in flow-stone

National Geographic Magazine October 1953 p. 442

*

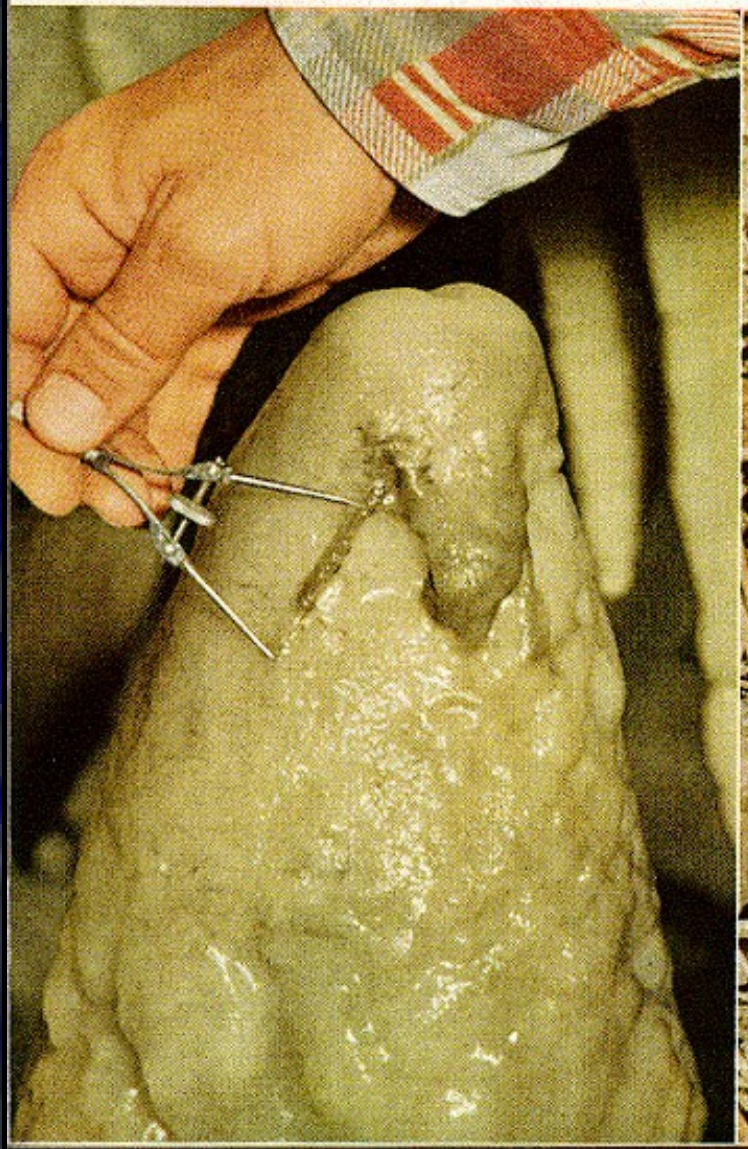

↑ Naturalist Prasil in the Bat Cave Examines Guano for Insect Life

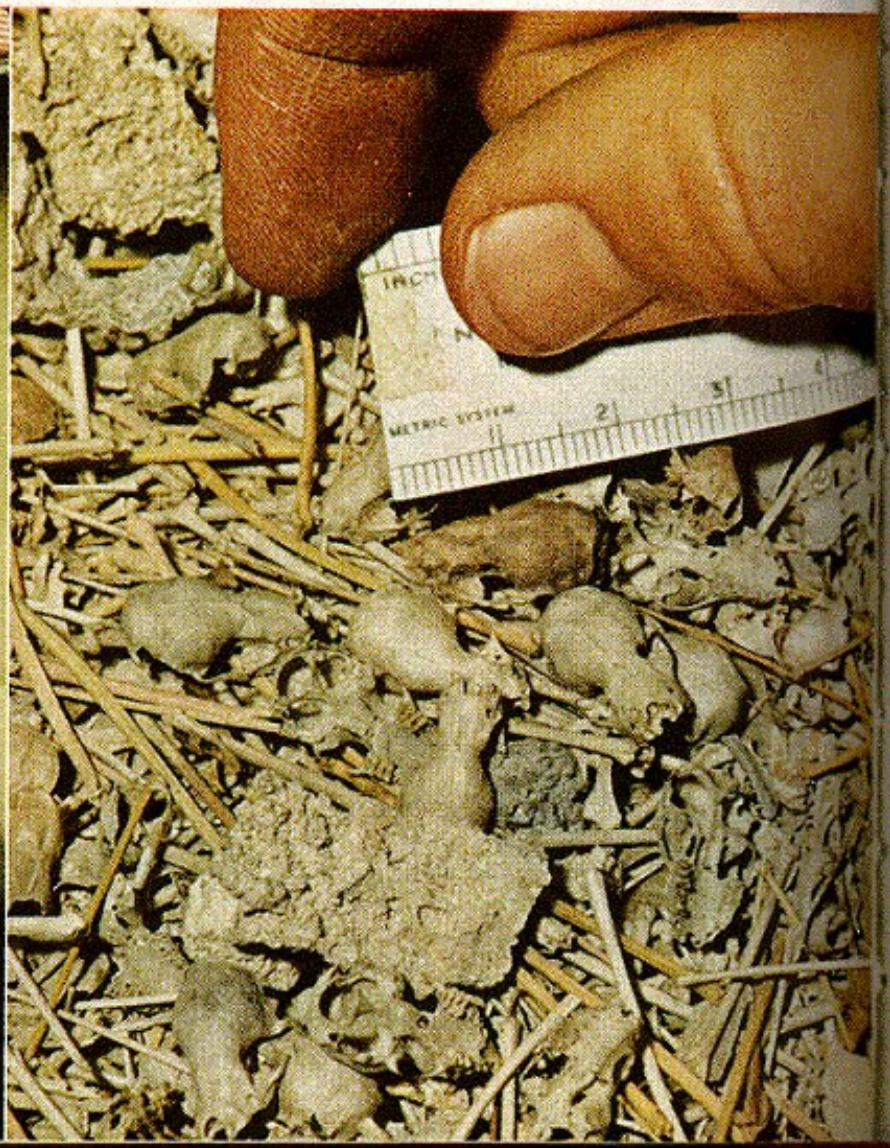

Diggers extracted 100,000 tons of this nitrogen-rich fertilizer for citrus orchards. They left 6-foot seams of centuries-old guano layered between stone laid down by flowing water. This fresh material fell from the ceiling, where the bats sleep head down.

↓ Calipers and Ruler Measure a Fossil and the Skulls of Kindred Bats

Left: This bat, falling on a stalagmite, became firmly cemented as the stone grew. Feet are buried; the head hangs down; wing bones show up darkly.

Right: Fragile skulls and other bones accumulated in this graveyard as bats fell to the floor and died.

Refrigeration shed built 1926-1927 inside Fort Pickens in Pensacola, Florida

40 years in Indiana!

Geology textbooks tell us that stalagmites and stalactites form at a rate of thousands of years per cubic inch. Obviously, at such slow rates, it would take a very long time to form them. The public is often exposed to claims of these great ages by tour guides in commercial caverns.

George Rogers Clark Memorial is built on the bank of the Wabash River at Vincennes, Indiana. The limestone came from Bedford Quarry, near Bedford, Indiana, just six miles from the entrance of Blue Springs Cave, one of the most beautifully decorated caves in the nation. Water percolates down through cracks in the memorial building into the basement as it does in the cave and the result is the same kind of formations as found in the cave. Stalagmites, stalactites as well as five columns eleven feet tall are found in the basement. This *building was forty years old* when these pictures were taken. What does this say about the claim of great ages for cave formations?

2-17-03 Dear Dr. Hovind,
These stalactites are growing in the garage of a private student condominium near UT campus at Austin Texas. The name of the condominium complex is Centennial Condos on the corner of 28th and Rio Grande. This structure was completed in October of 1997. They have had to put up tin attached to the beams of the garage in places so that

"TEPEE FOUNTAIN"
This structure, started in 1903, was created by piping the hot mineral water through a vertical pipe built into a rock pyramid. As the water exits the top and flows over the structure, it cools and deposits travertine, much the same as the Terraces are formed near the Big Horn Spring within the park. The algae within the water colors the deposits.

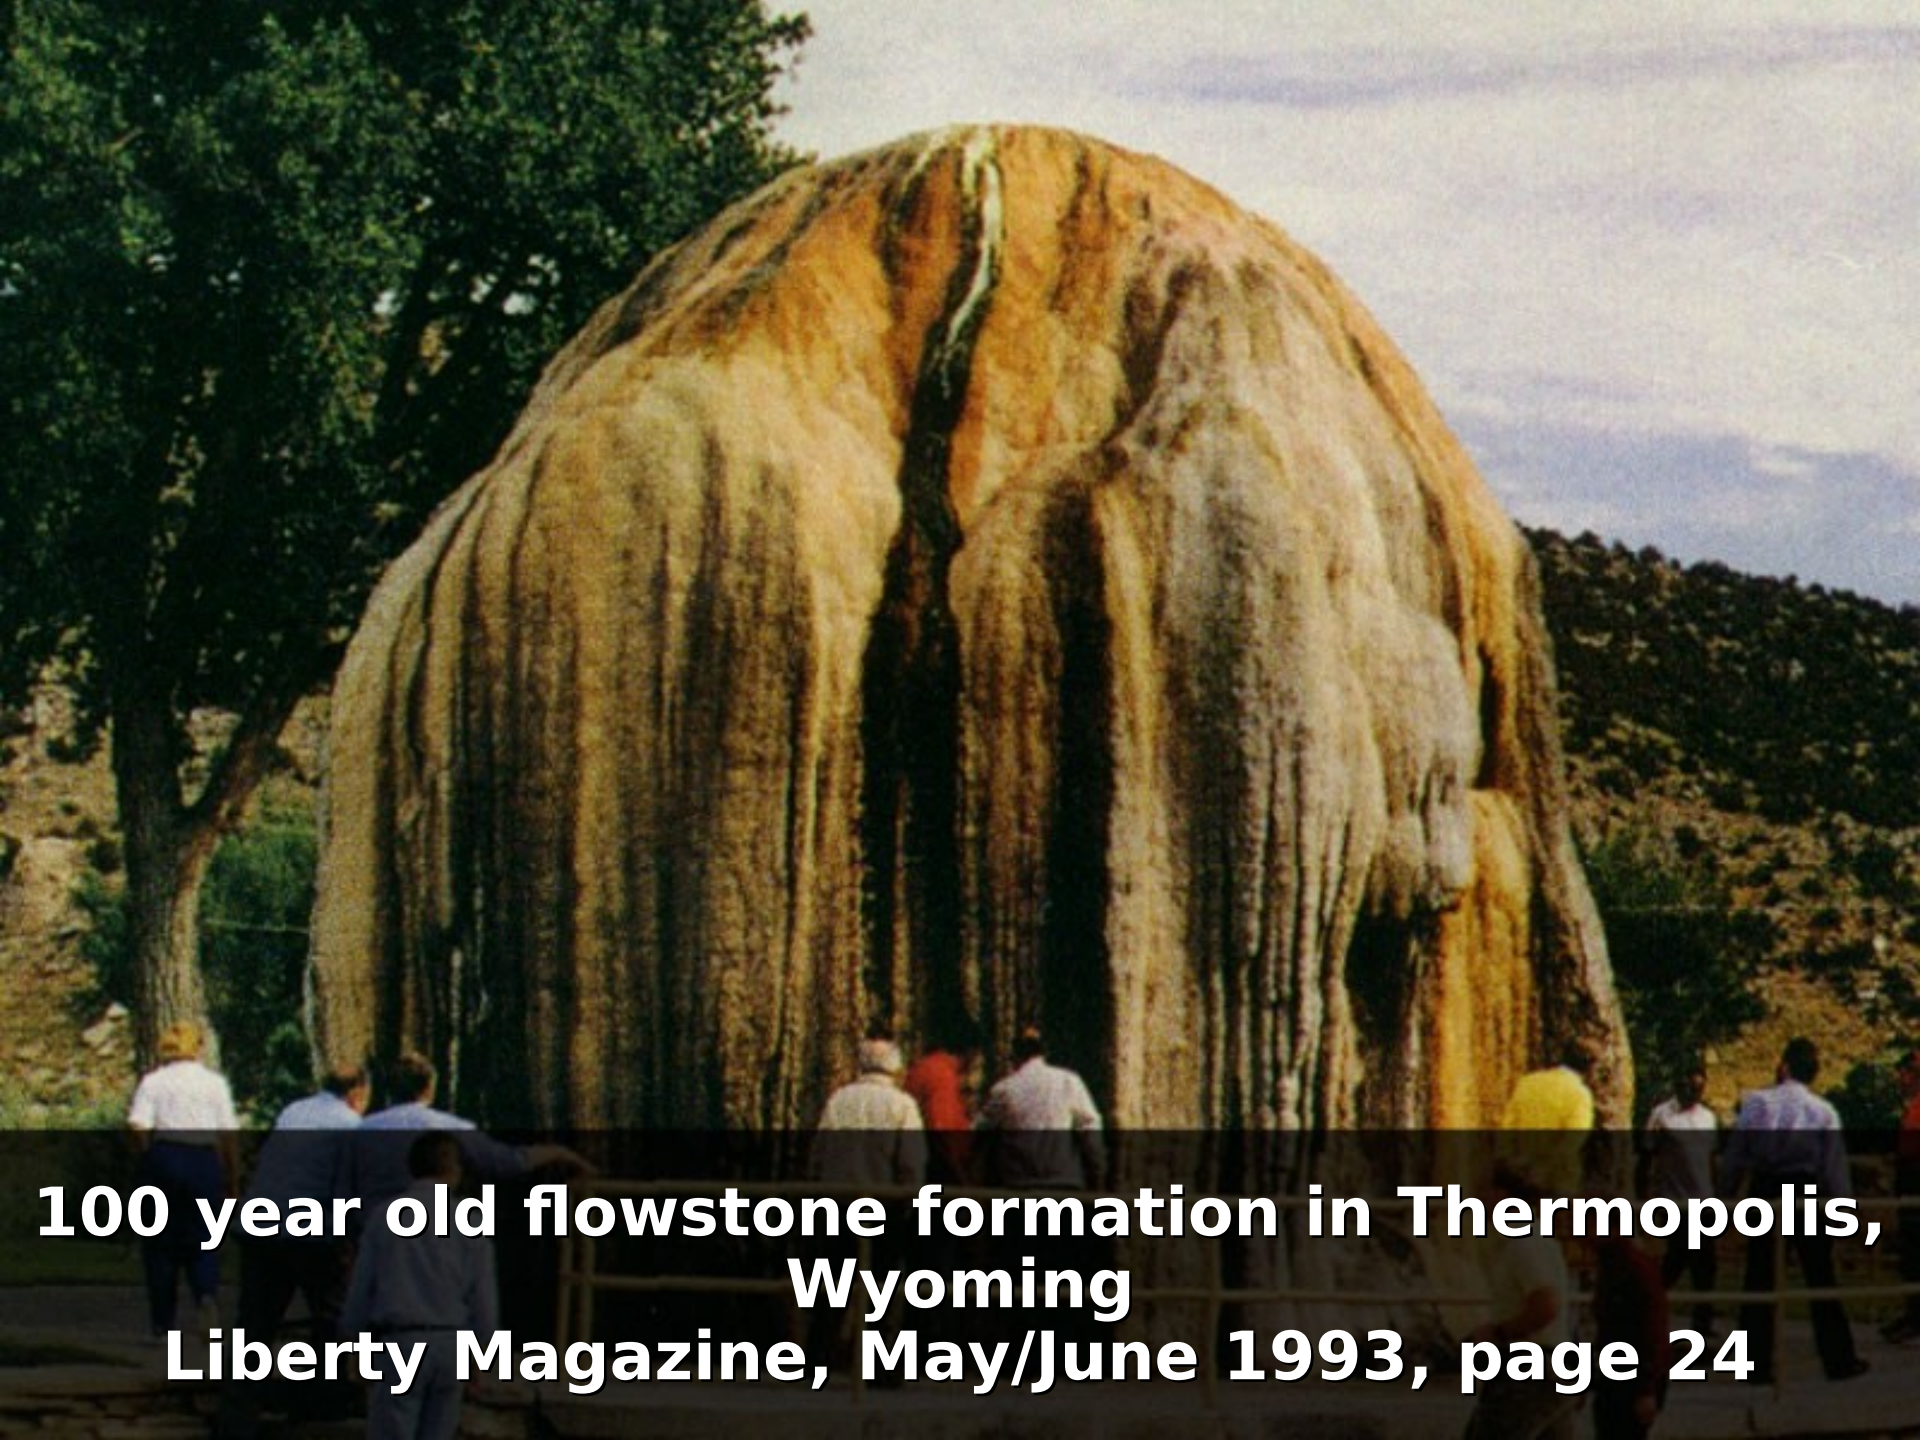

Here is was a few decades later!

Crawford H. Toy A great Southern Baptist seminary professor in 1876.

Professor Toy, was known as a brilliant linguist and theologian. Following the Civil War he had studied in Europe, where he was exposed to Darwinian theory and to "the new ideas of the German scholars" on Old Testament history and inspiration. … Her conclusion was that …evolution was for her an "untenable position." …Later in China, heated letters arrive, and "The temptation is great." The professor, however, now espouses theories that "do not square with God's Word." Rejecting C.H. Toy, Harvard, and glory, Miss Moon says, "My cross is loneliness…"

“The Bible intends to teach a plain six-day creation. The Bible is simply in error at that point.”

Particle Mass (gm)

Only 1/67th of the moon dust is from space*. The actual measured amount of dust turned out to be 2.7 inches per million years or 1033 feet in 4.6 billion years.

In the Beginning by Walt Brown

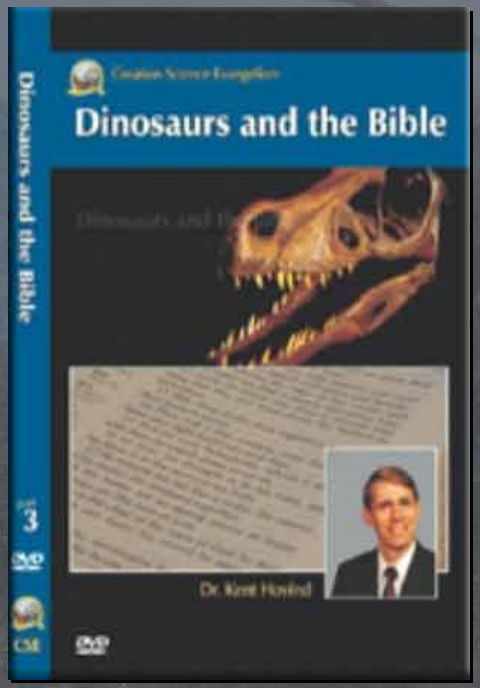

In 1981, I had a conversation with Dr. Herbert A. Zook of the U.S. National Aeronautics and Space Administration (NASA). He had been intimately involved in estimating the thickness of the dust layer on the moon before the first Apollo moon landing. He also helped analyze the lunar material brought back from the moon. Of the many interesting things he told me and sent me by mail, one is critical in answering the above question.

NASA did not realize until the moon dust and rocks were analyzed that only one part in 67 (or 1.5%) of the debris on the moon came from outer space. The rest was pulverized moon rock. In hindsight, this makes perfect sense. Meteorites that strike the moon travel about seven times faster than a bullet-averaging 20 km/sec. When they strike the moon, they are not slowed down by an atmosphere (as on earth), because the moon has no atmosphere.

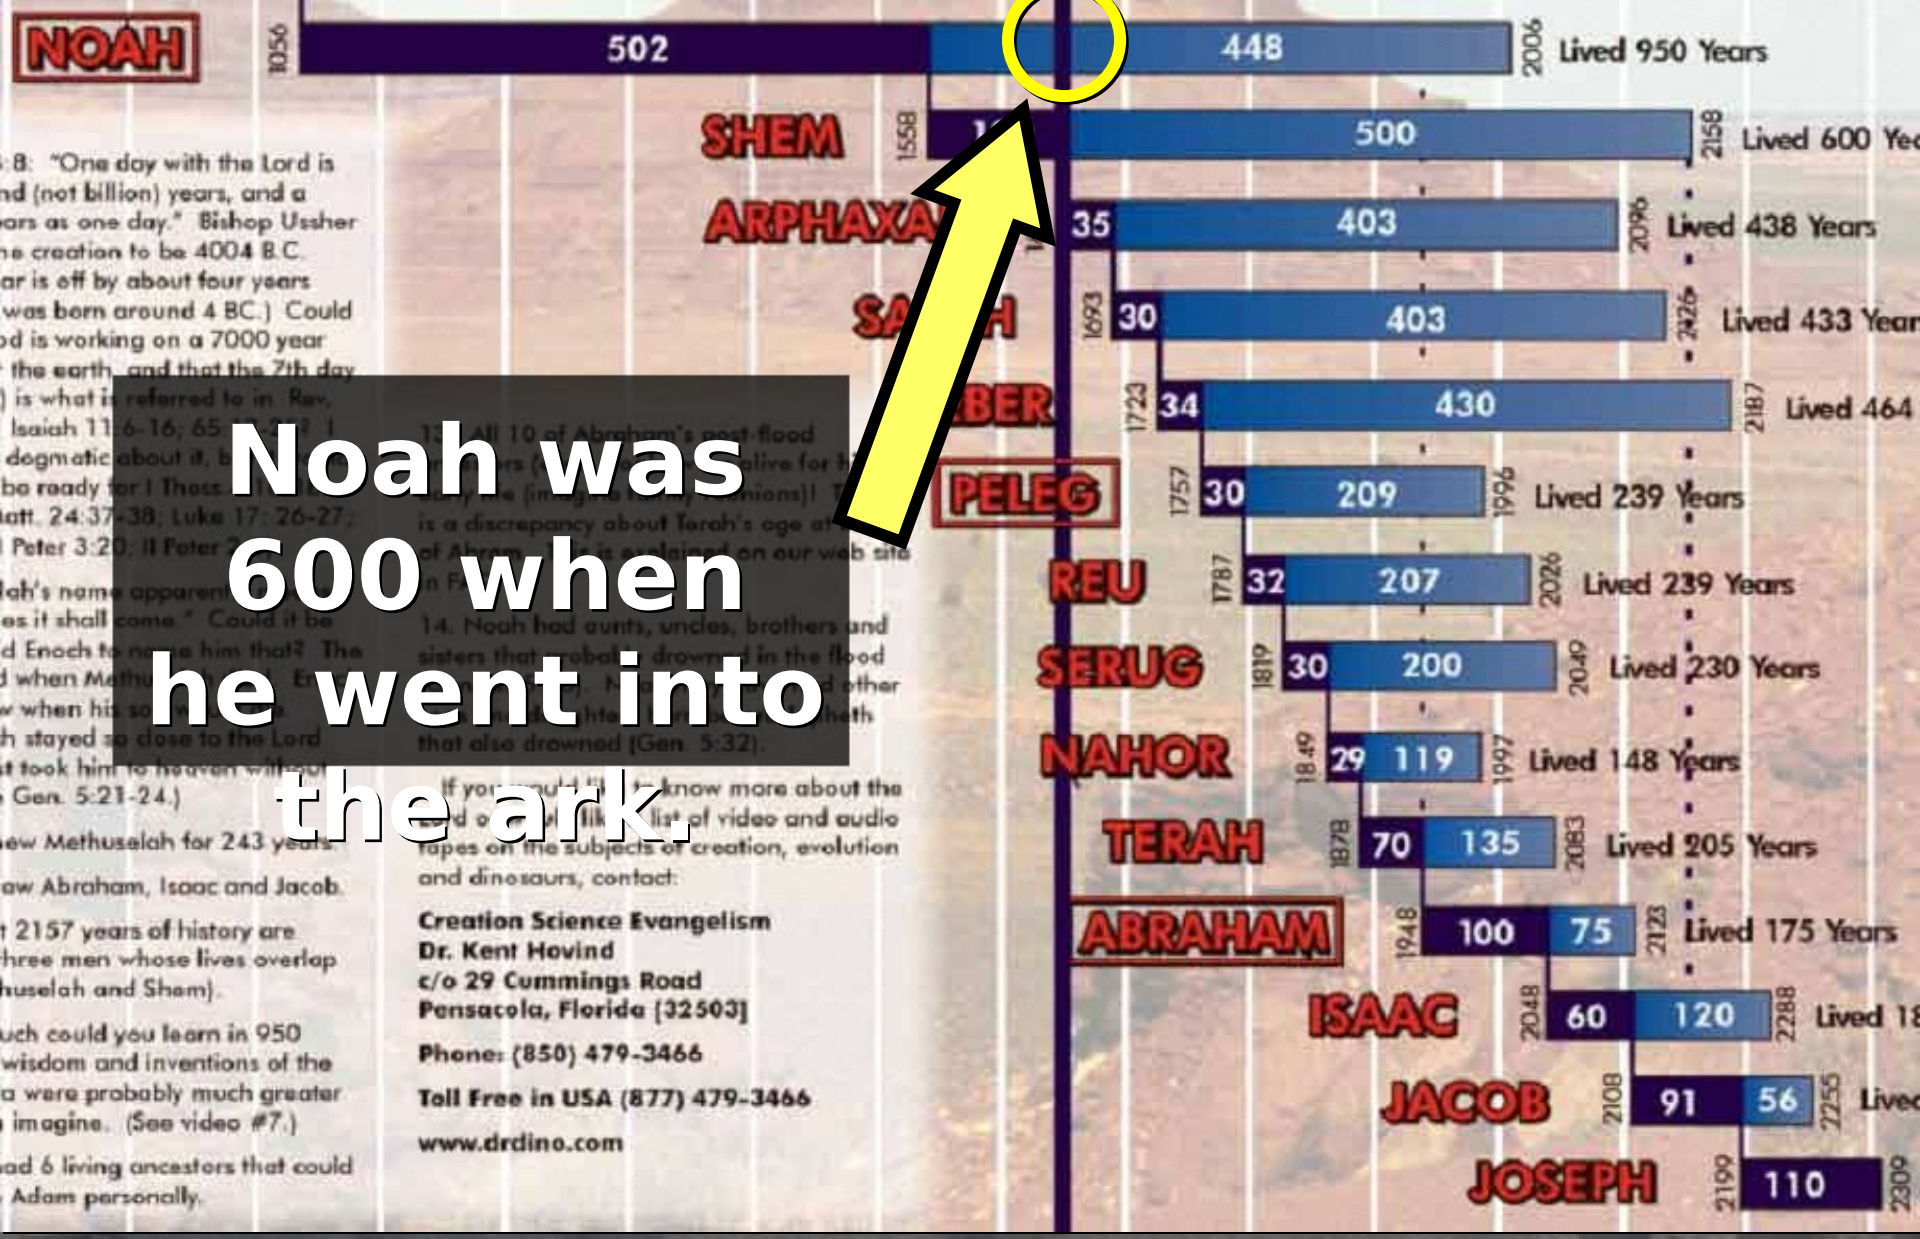

Therefore, the projectile, regardless of size, instantaneously vaporizes and kicks up a cloud of pulverized moon rock. The vaporized meteorite then condenses on the pulverized moon rocks. This was determined by slicing moon rocks and finding them coated by meteoritic material–material rich in nickel. Uncoated moon rocks have practically no nickel. In this way, NASA arrived at the factor of 67.2
